

# Big Science, big possibilities

# Future must be designed. Let's do it together.

## BIG SCIENCE HUB

Join a venue where business meets science.

The initiator and coordinator of BIG SCIENCE HUB is Wrocław Technology Park, which has been strongly connected to the Big Science market since its inception. WPT experts help Polish companies unleash their potential and discover new business opportunities.

# BIG SCIENCE HUB

## What is it about?

**BIG SCIENCE HUB** is a venue where business meets science. It is a platform enabling the flow of knowledge on how, where and with whom to establish relationships that drive measurable revenues. Join a base that brings together companies and institutions related to innovations and new technologies, and find new cooperation partners. Demonstrate your activities and gain insight into the potential of other businesses, universities and business environment institutions.

## Why the BIG SCIENCE HUB?

**Present** the offer of a company or institution that you represent to potential business partners.

**Find partners** who will help you grow your business or who will enter into cooperation with you.

**Seek** contractors or service providers who will provide assistance in your project implementation.

**Stay informed!** Read news from market and find interesting tenders and announcements from Big Science institutions.

### I. Join the base that connects business and science

For companies, universities, scientific institutions and business environment institutions, the **BIG SCIENCE HUB** base is an opportunity to present one's own potential, find partners, employees or investors. Its purpose is to assist in establishing and building stable contacts that will result in specific contracts, profits and in the transfer of scientific innovations to business.

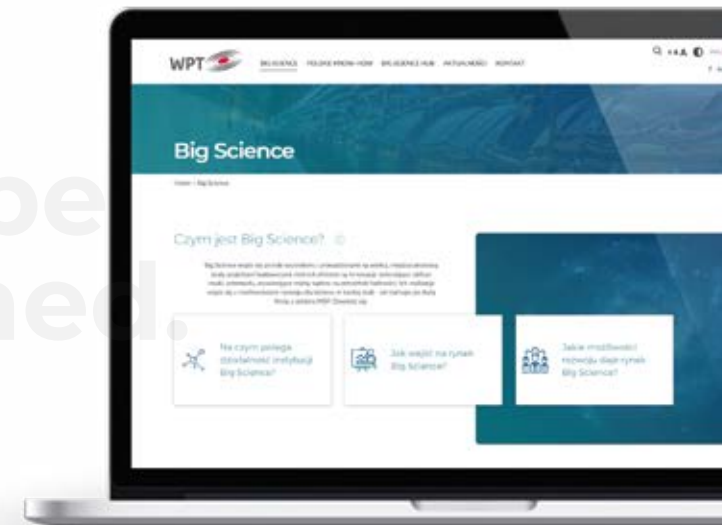

### II. Find a partner

Are you looking for companies that cooperated with CERN? Do you need a subcontractor specialising in photovoltaics, having contacts on Asian markets? The **BIG SCIENCE HUB** base will help you find such a person. These two examples show that with the use of broadly-developed criteria that make it easier to browse the data base, you can find partners who will meet your exact expectations.

### III. Use knowledge of our experts

The task of the **BIG SCIENCE HUB** portal is to promote Polish science and business in institutions such as CERN, F4E, ITER, ESS, ESO or ESA, and to popularise cooperation with them among micro-, small- and medium-sized enterprises. Not only do we show how to establish business relations with them, but we also inform of current tender procedures and requests for quotation. Read the news on our website and take part in events that integrate business and science.

future  
must be  
designed.
