

HIGH-TECH IN LOWER SILESIA:

SPATIAL MOBILITY

WWW.TECHNOLOGPARK.PL

Safe and fast transportation of people and goods, whilst at the same time being inexpensive and environmentally friendly, is one of the most important challenges of the 21st century. Wroclaw Technology Park offers the perfect conditions for innovative companies that want to expand into the exciting and state-of-the-art world of spatial mobility.

In support of this, WTP has many specialised laboratories onsite, which include: Laboratory of Material Properties; Laboratory of Energetics; and the Laboratory of Electronics, Mechatronics and Spintronics. Business residents at WTP receive preferential treatment when booking our laboratories to rent by the hour, allowing them to test and improve their solutions and prototypes without the inconvenience of having to leave the park.

Fly Me to Mars is a WTP programme designed to attract and support Polish enterprises, start-ups and innovators with their projects connected to space exploration.

There are many companies already resident at WTP that specialise in the supply of products and systems designed to enhance modern transportation solutions.

WTP helps link our scientific communities with business enterprises and institutions throughout Lower Silesia, for the combined benefit of advancing both national and international projects involved in modernising transportation.

We look forward to working with you!
