

HIGH-TECH IN LOWER SILESIA:

# PRODUCTION OF MACHINES AND DEVICES

[WWW.TECHNOLOGPARK.PL](http://WWW.TECHNOLOGPARK.PL)

- The production of machines and devices has been a particularly strong aspect of the Lower Silesian economy for decades. Wrocław Technology Park offers the perfect conditions for innovative companies that want to expand into this well-established industry.
- In support of this, WTP has many specialised laboratories onsite, which among others include: Laboratory of Material Properties; Laboratory and Prototype Workshop of Mechanics; and the Non-Destructive Testing Laboratory. Business residents at WTP receive preferential treatment when booking our laboratories to rent by the hour, allowing them to test and improve their solutions and prototypes without the inconvenience of having to leave the park.
- WTP offers its residents 20,000 sqm. of production and storage areas that are located in a perfectly equipped hall. There is a modular system that allows for the leasing of any area, to enable business operations on any scale.
- WTP helps link our scientific communities with business enterprises and institutions throughout Lower Silesia, for the combined benefit of advancing both national and international projects involved in the fields of machine and device production.
- WTP is proud to host a number of business residents at the park that specialise in automation and robotics, which has won them considerable prestige and eminence in competitions held both in Poland and internationally.

**We look forward to working with you!**
