

HIGH-TECH IN LOWER SILESIA:

# BIG SCIENCE

[WWW.TECHNOLOGPARK.PL](http://WWW.TECHNOLOGPARK.PL)

Big Science projects provide many of the innovations which we all enjoy in everyday life. Wrocław Technology Park is proud to offer extensive support to innovative companies that want to get involved with the projects created by any of the Big Science centres.

In support of this, WTP has many specialised laboratories onsite, which among others include: Laboratory of Material Properties; Laboratory of Optics, Photonics and Metrology; Laboratory of Energetics; Laboratory of Electronics, Mechatronics and Spintronics; Non-Destructive Testing Laboratory; Laboratory of Particle Acceleration, which can simulate the conditions present in space. Business residents at WTP receive preferential treatment when booking our laboratories to rent by the hour, allowing them to test and improve their solutions and prototypes without the inconvenience of having to leave the park.

WTP is proud to host a number of business residents at the park who have been successfully working on Big Science projects for many years.

Fly Me to Mars is a WTP programme designed to attract and support Polish enterprises, start-ups and innovators with their projects connected to the Big Sciences, including space exploration.

WTP helps link our scientific communities with business enterprises and institutions throughout Lower Silesia, for the combined benefit of advancing both national and international Big Science projects.

**We look forward to working with you!**
