

# Polish Industry for Nuclear Energy

Edition 2016

Ladies and Gentlemen,

I am pleased to present you the catalog entitled “Polish Industry for Nuclear Energy”. This is the first document in Poland to identify enterprises having competences in the area of nuclear power. The document has been prepared based on a comprehensive analysis of Polish industry carried out upon the commission of the Ministry of Energy. We are convinced that the catalog will serve as a guide for you regarding Polish enterprises operating in the area of broadly understood power engineering, and not only nuclear energy.

Polish industry has gained significant experiences and competences in implementing nuclear power projects - mainly within the EU. Polish enterprises also implemented contracts for nuclear power plants outside of Europe. The competences and experiences of our enterprises from related sectors (conventional power engineering, chemical and petrochemical industry) can also be successfully used for the purposes of nuclear power.

Our country is preparing for the construction of the first nuclear power plant. The company responsible for the implementation of the project is PGE EJ1 Sp. z o.o., which is currently preparing the location of the power plant and has entered the preliminary stage of choosing the technological partner. While preparing for the development of nuclear power, Poland has implemented relevant legal provisions, and extensive actions have been carried out in the field of gaining and maintaining public acceptance for the nuclear power as well as the proper preparation of the personnel.

Ensuring the participation of national industry in the construction, and afterwards in the operation of nuclear power plants will serve as one of the key areas guaranteeing the successfulness of this project in Poland.

I truly hope that Polish industry will find international partners and that cooperation ties will be established for the purposes of engaging Polish entrepreneurs in international nuclear power projects, and that partners of Polish entrepreneurs will also efficiently cooperate for the benefit of the Polish nuclear power program.

Wishing you a lot of success in the performance of ambitious tasks in the area of nuclear power,

**Krzysztof Tchórzewski**  
Minister Energii  
Rzeczpospolita Polska

A handwritten signature in blue ink, appearing to be 'K. Tchórzewski', written over a light blue horizontal line.

# Polish economy and energy sector

## Strategic location in the heart of Europe

The total maximum capacity in Polish Power System (PPS) reached 39 777 MW (as at 31 December 2015). The maximum capacity of utility thermal power plants accounted for approx. 71.5% of the total maximum capacity in the PPS, of which hard coal - fired power plants represented 48.11% and lignite fired plants represented 23.44%. The maximum capacity of wind and other renewable sources was approx. 13.2%. The other sources represented approx. 15.2% of the total maximum capacity in the PPS.

The structure of power reachable in national power plants as of 31 December 2015:

**19 443 MW**  
Coal-fired power plants

**9 322 MW**  
Lignite-fired power plants

**973 MW**  
Gas power plants

**2 451 MW**  
Industrial power plants

**2 330 MW**  
Hydroelectric power plants

**5 258 MW**  
Wind sources and other renewable resources

**161 438 GWh**  
National consumption of electricity in 2015

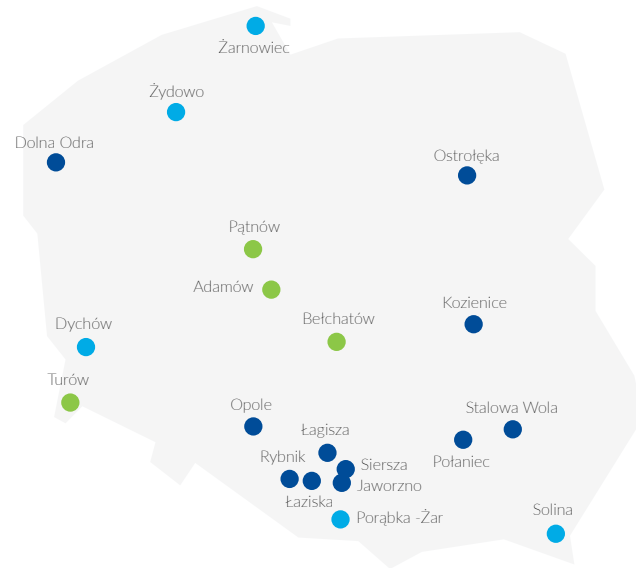

**25 101 MW**  
Evening peak of the national demand in 2015 (07.01.2015)

**19 070 MW**  
Evening minimum of the national demand in 2015 (10.07.2015)

Aarsleff Sp. z o.o

foreign company

Aarsleff Sp. z o.o. is a part of the international Per Aarsleff concern with registered office in Denmark. In Poland the company has been operating since 1996. Its activity involves design and execution of specialised foundations. It is also specialised in designing and executing hydraulic engineering works on inland and sea waters. The company has its own fleet of machinery which enables it to carry out advanced infrastructural projects in various sectors: industrial, roadworks, railway works, residential and hydrotechnical. In Poland the company carries out its operation through a network of Regional Offices and its own specialised Design Bureau. One of the distinguishing features of the company is the support provided during works by a team employed by the in-house design studio, which performs necessary computational analyses, detailed engineering, process and as-built documentation. Current offering in the area of industrial construction include: excavation support made of berliner walls, sheet piles driven, vibrated or pressed in, palisades of drilled piles or piles formed in ground by deep soil mixing (DSM) or jet-grouting, sealing excavation bottoms by deep soil mixing or jet grouting, anchoring at the excavation bottom or bottom plates using piles, micropiles or temporary/permanent groud n anchors, anchoring excavation retaining structures with permanent or temporary ground anchores or using micropiles.

2

AWBUD S.A.

Polish company

The AWBUD brand provides a bundle of services and products which include: design, supervision and general contracting (AWBUD Design & Build), construction of reinforced concrete structures (AWBUD Reinforcement), installation (Instal Lublin). The Group is specialized in the field of manufacturing production and storage facilities for metallurgy, food industry, pharmaceutical and other industries, energy, utilities and commerce, wastewater treatment plants and municipal technology and specialized reinforced concrete works for the industry. The company provides the development of detailed design / drafting regulations following industries: architectural, construction, technology, installation, electricity; Earthwork, preparation and isolation of the ground under the foundations, construction of reinforced concrete foundations, structural walls and ceilings, columns, beams and joists reinforced concrete, reinforced concrete elements: stairs, balconies, architectural concrete structures specialist reinforced concrete work for the industry; Design, supply and installation: heating, ventilation, air-conditioning, sanitary, technological, sprinkler systems. It offers comprehensive management service investment process general-made projects from concept to detailed design through implementation work as a general contractor and comprehensive reinforced concrete works, ending with the delivery of investment and putting into operation.

3

Beroa Polska Sp. z o.o.

foreign company

BEROA company, ex-Karrena Sp. z o.o., is a company offering construction of exhaust stacks and insulation fire-proof brickwork for power industry, steel industry, chemical industry, petrochemistry, glass industry, limestone industry, cement industry and environment protection facilities. The offer of the company includes full scope of services for the project, including computersupported engineering calculations, engineering advisory and supply of required materials, design and calculation works and supervision of installation. This method is often employed at foreign projects, involving complete installation of own or supplied structure. Concepts of BEROA company are its input in practical applications of environment protection; company builds brickworks for municipal waste incineration plants. BEROA has large experience in constructing all types of boilers and grates and variety of furnace liners; it also owns several patented technologies, e. g. system of air-cooled walls. BEROA also constructs exhaust stacks. Approximately 70% of all exhaust stacks in Western Europe higher than 300 metres have been built by KARRENA (now BEROA). BEROA staff also act as experts in commissions dealing with environment protection, occupational safety, material science and hazardous materials.

4

Bilfinger Polska Sp. z o.o.

foreign company

Bilfinger Industrial Services Polska Sp. z o.o. is a part of the international Bilfinger group. Bilfinger Industrial Services Polska Sp. z o.o. is a provider of comprehensive operational support, overhauls, new build and upgrate projects. The key service of comprehensive operational support involves all disciplines: mechanical, electrical, I&C, fire-resistant masonry, thermal insulations, scaffolding and diagnostics. Moreover the company carries out overhauls, new-build projects and upgrades in all disciplines mentioned above, as well as construction and installation works, workshop assembly, process equipment, support heating systems, production of: steel structures, parts for power engineering equipment, pipeline components and elbows, welded structures; it performs overhauls, inspections and repairs of I&C equipment, overhead crains, electric hoists and cranes, thermal insulations, design, installation, uninstallation, renting and transport, cleaning industrial and power facilities. Bilfinger Industrial Services Polska Sp. z o.o. is carrying out new build and upgrade projects, and turnkey deliveries of new facilites as EPC contractor. Comprehensive delivery includes engineering, creating technical documentation, organising construction process, deliveries of materials, construction and installation works, supervision, quality control, warranty and post-warranty

5

Biprocemwap S.A.

Polish company

Biprocemwap SA is a design-engineering firm that executes project documentation and carries out investments for industrial buildings. The offer is addressed to customers in the manufacturing of cement, lime, gypsum, energy, industrial construction and aggregate industry in terms of: organization of tenders, multimodal design, performing author's supervision, replacing the investment, "turnkey" investments, consulting, security and protection and preparation of environmental design documentation in the following industries: technology and mechanical, communication, architectural, building and construction, electrical, automation and control, installation of water and sewer systems and HVAC (heating, ventilation, air conditioning), economic. The company has extensive capabilities and experience in implementing projects as a general contractor. The scope of work under the general investment: Pre work activities and conceptual and analytical development, basic engineering construction and execution, obtaining building permits, contracts for the supply and construction and assembly works, technical specifications, conducting tender procedures, implementation of the project: completion of deliveries, construction and assembly work, construction supervision, administrative and legal investment: financial services, legal services, budgeting, scheduling, quality control, obtaining use permits, the transfer of facilities being built together with all the documentation.

6

Bipromet S.A.

Polish company

Bipromet S.A. is an enegineering and construciton company which offers complex design-and-build deliveries. Bipromet along with its subsidiary Przedsiębiorstwo Budowlane Katowice S.A. corms a Capital Group. Main scope of Bipromet Group's business includes: comprehensive multi-disciplinary design works; EPC project deliveries; renting office space. Bipromet offers engineering services for all stages of an investment project, from techno-economic analyses to detailed engineering and construction supervision for following sectors: industry, industrial construction, general construction, environment protection. Bipromet specialises at environmental projects. The company designs and delivers complete process lines for abatement of atmospheric emissions of pollutants, especially exhaust gas de-dusting systems: electrostatic precipitators and gas cooling reactors. Bipromet also creates environmental impact assessments for plants and facilities. Bipromet Group is an experienced contractor for general construction works: production and storage halls, supermarkets, public buildings (residential developments, schools, swimming pools, sporting halls). Customers of Bipromet are primarily industrial operators, espeically metallurgy of non-ferrous metals, steel works, power plants and cement plants.

7

Budimex S.A.

foreign company

Budimex is one of the largest polish construction firm, with a healthy financial standing and the best cash position. Budimex as an enterprise listed on the Warsaw Stock Exchange is a part of RESPECT index. Budimex gets more than 5.000 full-time jobs and cooperates with subcontractors whom employs over 35.000 people on Budimex sites. Firm offers services in the sectors of roads, rails, airport, buildings and industrial infrastructure as well as power industry and environmental protection. The energy and industrial market are key areas of Budimex development. Budimex offers and ensures the implementation of all energy facilities in "turnkey". In 2014, Budimex signed a contract for the construction of a new power unit of 450 MWe in Turów Power Plant in consortium with Mitsubishi Hitachi Power Systems Europe GmbH and Tecnicas Reunidas. In 2015, Budimex successfully completed execution of the contract, in the EPC formula, for Waste Management Plant in Białystok. The company has specific technical expertise in the field of energy, gas transmission and industrial installations.

Budownictwo Elektroenergetyczne Selpol S.A.

Polish company

Budownictwo Energetyczne Selpol S.A. is a company performing construction works in electrical power engineering. It also provides services involving aluminium cables with composite cores and wedge wires, e. g. ACCC/TW and others for similar applications (e. g. ACSS, TACSR, ZTACSR, GZATACSR (GAP)) on the extra high voltage overhead transmission lines. Selpol provides: engineering, procurement, construction and installation, and maintenance of facilities such as: power substations and transmission lines of high and extra high voltage, overhead fibre optic routes - using OPGW, ADSS, MASS and ADL technologies; installation of aluminium cables with composite core and wedge wires of ACCC/TW type and others for similar applications (e. g. ACSS, TACSR, ZTACSR, GZATACSR (GAP)) at high and extra high voltage overhead transmission lines. The company operates at Polish and foreign markets. Annual average employment is 165 persons. Partners of the company include: PSE S.A., Energa S.A., EnergiaPro, GRUPA TAURON S.A., RWE Stoen Operator Sp. z o.o., PGE Polska Grupa Energetyczna S.A.

Dyckerhoff Polska

foreign company

Dyckerhoff Polska Sp. z o.o., previously known as Cementownia Nowiny, offers a wide range of cements, ready-mixed concrete and construction systems. The company's activity focuses on manufacturing cements, construction systems and ready-mixed concretes. The core activity of Dyckerhoff Polska includes manufacturing and sales of Portland cements, multi-component Portland cements (with mineral additives) and metallurgical cements. Another business line, which is a key distribution channel for cement, is production of ready-mixed concretes. Manufacturing and sales of concretes is carried out via concrete facilities located in most cities of the southern part of Poland. Another type of service offered by the company is advisory on properties and application of cements and concretes carried out by the Concrete Process Centre. Dyckerhoff Polska Sp. z o.o. offers not only concrete mixes, but also modern and efficient long distance concrete transfer equipment. Modern equipment which enables automation of concrete element casting is important element of a construction site. Dyckerhoff Polska is a part of Buzzi Unichem Group.

Dynamiks Sp. z o.o.

Polish company

DYNAMIKS Sp. z o.o. offers specialised construction and installation services for industrial and general construction business, such as: overhauls and upgrades of cooling towers, including repairing damage of tower's shell from the inside and outside, washing by high-pressure equipment, re-profiling surface defects with PCC materials, repairing cracks, closing working seams, smoothing surface with fillers - mineral and cement-epoxy materials, applying protective coating, anti-corrosion protection or replacement and repairs of ladders, protective barriers and stairs, overhauls and sealing expansion joints in tower's basin, upgrades of internal equipment: wet deck, water distribution system, lift eliminator, spray nozzles and forced-draft cooling towers along with overhaul of reinforced concrete structure of the tower - columns, beams, ceiling slab etc., replacement of the motor, gear and fan. Additionally the company performs services to industrial stacks made of reinforced concrete, ceramic materials and steel, tanks and vessels, silos and other reinforced concrete structures, sewage treatment plants, hydrotechnical structures, piles, bridges. It provides services for design analyses, expert opinions, technical condition evaluations, renovation of factory halls, corrosion protection of steel structures, dismantling and demolition works, maintenance of building structures. All activity is focused on comprehensive services, starting from preparatory works, evaluation of technical condition, and then to detailed engineering, overhauls or upgrades. The company works both as EPC contractor and as subcontractor of specialised works.

Eco Instal Sp. z o.o.

Polish company

ECO INSTAL is a specialise dcompany which carries out comprehensive construction projects for industrial environment protection solutions, especially air protection. The company designs, manufactures and installs equipment for cleaning air of solid and gaseous contaminants. The factory is organised into five main departments: production preparation department, assembly department, painting department, industrial automation department and service department. The factory owns equipment such as rollers, press brakes, equipment for laser metal cutting, plasma cutters, metal sheet bending machines, saws for pipes and shaped profiels. It also uses a cabin for jet and abrasive cleaning. The company offers services for load-bearing structures, tanks, silos, containers, reactors, maintenance platforms and many other steel products. The company has its own design/engineering office for sanitary, mechanical, electrical, I&C and civil disciplines. the company uses design support software such as SolidWorks, AutoCad and Inventor as well as Robot Millenium software for analysing and dimensioning engineering structures. The company provides external services including engineering, software creation, procurement, installation and commissioning of industrial control and technical monitoring systems.

Energomontaż Północ

Bełchatów Sp. z o.o.

Polish company

Energomontaż-Północ Bełchatów Sp. z o.o. is a contruction and installation company specialised at designing, manufacturing and installing steel structur, power industry equipment and comprehensive construction of industrial facilities. Scope of company's installation services includes: steam turbines, gas turbines and electricity generators, treatment plants for drinking and industrial water, boilers, coal pulverisers, air preheaters and fans, low-, medium- and high-pressure pipelines, flue gas desulphurisation and denitrification plants, dry ash removal systems, state-of-the-art electrostatic precipitators, fluidised bed boilers, lifting equipment, steel stack structures, exhaust gas ducts, process lines for various industrial facilities: paper mills, cellulose plants, steel meels, cement plants, oxygen generation plants, compressor stations and food industry facilities. The company successfully develops also its offering of overhaul services for various industrial and energy facilities, as well as tests such as: static tensile strength tests, bending and impact tests, hardness tests, macro- and micro metalography, X-ray and gamma ray examination, radiography and ultrasonography of: weld joints, delaminations, thickness magnetic tests and penetration tests of materials and welded joints, steelscope and endoscope tests, leaktightness tests, examination of intercrystal-line corrosion and ferrite content evaluaiton.

13

Energopol S.A.

Polish company

Energopol – Szczecin S.A is a construction company with more than 60-year tradition. For many years its activity was focused on hydrotechnical construction, i.e. rebuilding the port and shipyard infrastructure after war damage, and then its expansion. Sustaining the continuity of experience and tradition, having specialized equipment, Energopol – Szczecin s.A. expands its competence and business profile. At the present time, apart from marine engineering, in which the Company is a leader in Poland, it also implements large projects as a General Contractor, in the scope of construction of road and bridge infrastructure (including expressways), water and sewer installation, large buildings as well as special foundation – also for power industry – throughout Poland. We have many unique technologies of implementing piles like: Tubex, Vibrex, systems of driving, vibrating and pressing sheet pile walls. Currently Energopol-Szczecin S.A. is a modern company employing highly qualified staff, equipped with modern equipment. Company, acting in accordance with the policy of quality, has the credibility confirmed with the certificates.

14

FUD S.A.

Polish company

One of Poland’s premier manufacturers of all types of crane and lifting equipment and supplies it’s products to many branches of industry and commerce, one of the few companies with a worldwide reputation that has in it’s portfolio the design, manufacture, delivery, assembly, commissioning, servicing and post guarantee care of all the equipment that it manufactures. Apart from it’s prime area of expertise which is specialist design and build crane solutions, FUD is willing and capable to provide full back up in the design, manufacture and supply of all types of heavy steel construction. This includes, but is not limited to services such as basic and detailed engineering design, fabrication, machining, heat treatment, shot blasting and painting. FUD assists in all areas such as crane workshop foundations, tracks for hoists and crane railways, Our over 120 year history ensures that the customers in our market can also take advantage of our expertise and experience to provide them with consultancy services, with the provision of the issue of court recognised expert opinions, as well as training in all aspects of crane operations. Our extensive archive library always provides support in the realm of maintenance services and the supply of spare parts of ALL of our products. It must be stressed that FUD specialises in custom made crane solutions for difficult assignments for both small to medium businesses as well as global companies. Our modern welding and machining facilities which include CNC plasma cutting and the latest technology Kempa welders are enhanced by modern rustproofing technology making use of the latest technology of shotblasting cabin and state of the art painting booths – both complying with the latest H&S requirements as well as ecological considerations. In summary our customers receive products which guarantee quality power with control through the use of modern technology in full compliance with current safety and ecology considerations.

Erbud S.A.

Polish company

The Group Erbud SA as the general contractor implements commercial projects, public utilities, energy, housing and road-engineering. Erbud has experienced, highly qualified engineers and specialists in the construction industry. Currently, the Erbud Group offers investment operations as a general contractor and service subcontracting in Polish and other European countries in the field of building construction (shopping centers, hospitals, office buildings, public buildings, flats), construction for power (power plants, power plants, heating plants, incinerators), service industry (modernization, repairs, maintaining the continuity of motion), renewable energy (wind farms), real estate development (residential buildings especially in the Kujawsko-Pomorskie region), construction engineering and road (roads, squares assembly, repair of roads and streets). Moreover committed to customer service, renovation and modernization of efficiency in heating, energy, chemical industry, refineries, municipal management (incinerators, sewage treatment plants). In this the power industry: boilers and auxiliary equipment, turbines, coal handling plants, purification plants and desulfurization, technological installations, networks, chamber and heat distribution, thermal waste treatment plants, pumping stations and pumping stations and specialist services.

Fluor S.A.

foreign company

Fluor is carrying out complex projects including design, procurement, EPC construction and maintenance activities. Fluor’s office in Gliwice provides design and engineering services for entire Eastern Europe and cooperates iwth design and engineering teams of Fluor in other parts of the world. The main businesses on which Fluor is present in Poland include: refineries, chemical plants, power industry. Fluor S.A. 's operations are global and the company has knowledge necessary to design, build and maintain comprehensvie power industry facilities. Fluor carries out EPC deliveries for following power industry facilities: gas-fired power plants, integrated gasification combined cycle (IGCC) units, nuclear power plants, electrical power engineering services, renewable power generation, small modular reactor technologies, solid fuel power plants, power transmission infrastructure. Current production profile of the company is based on modular construction strategy. Fluor offers two approaches to production away from the site. The first invovles own manufacturing facilities in Canada, China, Mexico, Russia and Philippines. The other involves strong collaboration with external suppliers. The company has access to 145 independent shipyard sites all over the world.

Format UiMP Sp.z o.o.

foreign company

FORMAT Uimp Ltd. belongs to the FORMAT-LAMBDA group of entrepreneurial operating under common management. It provides services in the field of civil engineering and industrial sectors, in particular in the following areas: installation of reinforcing steel and formwork works, installation of dry gypsum plasterboard and suspended ceilings, installation of facades of buildings, thermal insulation, soundproofing and fireproofing, corrosion protection. A group of enterprising FORMAT-LAMBDA offers a full range of construction services, starting with a detailed implementation and ending with the complex construction and carpentry formwork with support for geodetic, installation of reinforcing steel and concreting. The work is carried out a two-stage control made reinforcing elements prior to concreting. The company also has its own crane operators. The scope of reinforcement installation: connecting rods (with wire bonding or welding), construction site or in the area of prefabrication, welding robots. In carrying out the works, the company used formwork solution: disposable and reusable, adjustable, sliding and sliding and stacking concrete mix (container, pump, conveyor belt), compacting (vibrators), maturation and maintenance of concrete (moisturizing, shielding, cosmetics).

Intop Warszawa  
Sp. z o.o.

Polish company

INTOP Warszawa was founded in 2007. The company's operations focus on construction, overhauls and repairs of engineering structures, renovation works at historical structures and execution of general construction works, sanitary installations and environment protection systems. Technical personnel of the company is authorised to independently perform technical functions in civil engineering, in bridge-building, road-building and general specialisations. The company supplies spray concretes produced with dry shotcrete; anti-corrosive protection of steel surfaces; comprehensive construction of insulating pavements at briges using epoxy-polyurethane reins. INTOP offers construction of structures such as bridges, flyovers, footbridges, tunnels and culverts. So far the company has delivered projects including: reconstruction of railway bridges over Żerań Canal at km 14. 330 and 14. 333; construction of two objects and retaining walls at Marsa Interchange; construction of a helicopter landing pad at the building of the National Security Bureau in Warsaw; reconstruction of two railway bridges within upgrade of the E-65 railway line; reconstruction of a bridge on the River Bug in Frankopol.

KB Pomorze Sp. z o.o.

Polish company

KB Pomorze Sp. z o.o. is a specialised engineering company involved in designing and executing works for the fuel industry, refineries and petrochemical plants, offshore projects and industrial construction, including new build projects, modernisations and overhauls of industrial systems, production, conversion, storage and distribution of raw materials and products. The main part of KB Pomorze's activity is carrying out complex tasks, mostly for large industrial companies. KB Pomorze is specialised in comprehensive construction of industrial facilities, mainly for fuel sector, industrial construction and marine economy. The company has its own manufacturing facilities. Activity concentrates on assembly, upgrading or overhauling industrial plants and process systems, construction and overhauls of storage tanks and related structures, and specialist marine economy structures. KB Pomorze also provides engineering works for steel structures, pipelines and process and fire protection systems, as well as storage tanks. The company is providing EPC turnkey deliveries. Its customers include the largest Polish petrochemical and refinery companies such as PKN Orlen S. A, Grupa LOTOS S.A., Operator Logistyczny Paliw Płynnych Sp. z o.o., Petrolot Sp. z o.o.

KOLB Sp. z o.o.

Polish company

Kolb Sp. z o.o. is a company manufacturing steel structures. Its main business is production and installation of steel structures, including prefabricated building structures, production halls, other commercial and storage halls, shopping centres, car dealerships, petrol stations, as well as steel structures for power industry, construction industry and other industrial applications, and for railway engineering (bogies, carriage components). Since 2008 KOLB Sp. z o.o. has been a part of Stalprofil S.A. Capital Group. Kolb has its own production workshop equipped with specialist machinery and equipment, with an output capacity of some 2. 5-3. 0 thosuang metric tonnes of steel structures per year. Kolb provides comprehensive engineering, production and installation services for steel structures used in construction industry and other businesses. It offers production of steel halls according to customer's design or according to own design; production of process line structures; production of masts and towers; production of rolling stock components and thier parts; production of structures of machinery and euqipment; production of support structures, maintenance platforms and euqipment platforms; manufacturing ladders, stairs, guard rails and barriers; painting of all manufactured steel structures with primers and external paintwork, using fire-resistnat paints; galvanisation of structures.

Metal Service Sp. z o.o.

Polish company

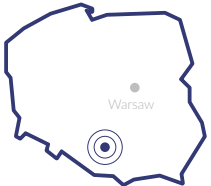

Metal Service is a supplier of steel structures for construction industry. Supplied structures are system-based solutions of highest quliaty which can be broadly used in construction engineering, opwer industry, chemcial industry and related businesses. The company is specialised in overhauling steam and hot water boilers, as well as high- and low-pressure valves and fittings of various applications and at various industries. The company supplies solutions for power industry, chemical industry and petrochemical industry. A wide range of services includes especially steel structures, metal sheet cutting, bending profiles. Additionally the company enables bending profiles of different shapes, such as rectangles, channel sections, angle bars, tubes and H bars. The company specialises at works involving high- and low pressure valves and fittings, including installation, overhauls and maintenance of low and high pressure valves, along with drives, electric and pneumatic servos, distribution valves, actuators, limit switches, district heating pipelines, thermal process facilities and heat exchange centres, pressure-reducing stations, process pipelines of steel, stainless or preinsulated pipes, compressed air and vacuum systems, pneumatic transport networks.

Miko-Tech Sp. z o.o.

Polish company

Miko-Tech Sp. z o.o. is a construction company. It is specialised in large construction projects for local administration, involving sewerage and sewage treatment platns. The offer includes performing construction works, delivery of steel structures and process equipment, both in a capacity of EPC contractor and subcontractor. The offer primarily involves: environment protection (sewage treatment plants, water treatment plants, pumping stations, sanitary and storm sewerage, waste landfills, land reclamation), hydraulic engineering construction (reservoirs - dry and wet, for firefighting and agriculture, regulation of streams, construction of locks, construction of floodbanks), construction of industrial and building structures (administrative buildings, technical and social facilities, process and industrial buildings), specialist construction (sport and entertainment facilities, tank yards, fuel storage facilities, construction, reconstruction and modernisatino of roads, constructino and modernisation of bridges and flyovers). The company is using own engineering teams and own testing laboratory which offers tests including: test of concrete compressive strength with sclerometric method, test of water absorbability in concrete with weight method, tests of concrete density, determining air content in a concrete mixture with pressure method, determining grain composition of aggregates, soils, test of ground thickness with a light dynamic plate, test of separation resistnace by pull-off method.

Mostmarpal Sp. z o.o.

Polish company

Mostmarpal Sp. z o.o. with registered office in Zarzecze near Żywiec is a Polish company performing deep foundation works for all types of building structures. The company is constructing drilled foundation piles, vertical and slanted. It designs and builds CFA piles, large-diameter foundation piles in tube cover, foundation on piles. Scope of activities includes large-diameter piles - vertical and slanted, continuous flight auger CFA (FSC) vertical piles. The offer also includes enlarging pile bases, pile injections and other similar works. Mostmarpal performs a wide range of general construction works, including: membrane linings, specialised industrial buildings, demolition works, bridge structures, earthworks. The company was founded in 1982. Mostmarpal is a founding member of the Polis Association of Special Foundations Buildiers, which acts as a platform for exchange of technical knowledge and experience by organising expert conferences and trainings, as well as introducing standards for certification of products and services related to pile foundations.

Mostostal Kielce S.A.

Polish company

Mostostal Kielce S.A. has been founded to create a cement plant and lime production plant in Kielce area. The company has participated in construction of almost all cement plants in Poland. It has also extended its field of operations into new market sectors - construction of environment protection facilities, upgrades of power industry facilities, constructio of bridges and flyovers, industrial halls, drinking water reservoirs and telecommunication masts. The company owns: a steel structure production plant in Kielce with a capacity of 1000 tonnes per month, a modern environment-friendly paint shop with cleaning-painting line, a metal spraying chamber equipped with a modern ventilation system with an external filter, a steel test laboraotry. Additionally the company offers: building steel structures (skeleton structures, coating structures, load-beraing structures, platforms, industrial systems, industrial machinery coponents), installation of steel structures (foot bridges, cylindrical and spherical tanks on ground level or on towers, pipelines and dedusting ducts - rectangular and round, antenna towers and etelecom masts, halls and buildings, pipe and process bridges, insulations, light panelling and facades), installation of process equipment and machinery for poewr industry, environmental protection, machine industry; other services (transport and lifting, welding, corrosion protection, abrasive cleaning and hydrodynamic painting of steel structures, fire-resistant coating of steel structures).

Mostostal  
Puławy S.A.

Polish company

Mostostal Puławy S.A. is specialised in building and installing steel structures, including structures of alloy steels and acid-resistant steels, installation of process systems, machinery and equipment at industrial facilities, construction and commissioning of environment protection systems, designing steel structures and process systems, construction and installation of specialised pipeline systems. The company acts as an EPC contractor for chemical plants, petrochemical plants, power industry facilities and environment protection facilities. Additionally the company has a Technical Office in Germany, located in Meerbusch near Düsseldorf. The office is performing project acquisition related to deliveries and installation of steel structures, especially for power engineering and industrial systems. In most cases the services provided by the German office involve comprehensive execution of the task, which includes deliveries of steel structures from Poland and their installation at site. An important role is also played by the technical facilities - steel structure factory with annual output capacity of 5000 metric tonnes, prefabrication plant, a workshop with cleaning-painting line, specialised installation equipment, including stationary and mobile cranes for internal transportation with lifting capacity up to 100 metric tonnes and a fleet of twelve delivery vehicles.

Mostostal  
Warszawa S.A.

foreign company

Mostostal Warszawa S.A. is among the Polish construction companies which operate domestically and internationally as general contractors for all kinds of construction works: general, industrial, environmental, power, infrastructural and road-related. The company has accumulated broad experience in building steel structures and process systems for oil and chemical industries. Power engineering construction includes services concerning construction of turnkey power plants running on fossil fuels, as well as engineering services, overhauls and upgrades, installation of power boilers, installation of turbine-generator units, designing new generation units. Industrial construction business includes execution of large volume industrial facilities: production and storage halls, process systems and steel structures for heavy industry. Scope of services includes: engineering, prefabrication and installation of process pipelines, as well as installation, overhaul and modernisation of furnaces for commercial, industrial and municipal power plants, as well as comprehensive execution and renovation of various industrial facilities. Mostostal Warszawa is one of the larger construction companies, it has numerous reference projects in industry, power engineering and general construction works. It rents specialised transport vehicles as well as construction machinery and equipment. It is a main shareholder of several companies which together form the Mostostal Warszawa Capital Group.

Mostostal  
Zabrze S.A.

foreign company

Mostostal Zabrze S.A. offers comprehensive construction of facilities for industry, including power industry and environment protection sector, as well as large, public utility and commercial buildings; it also acts as a subcontractor for specialised works. Mostostal Zabrze S.A. is a Dominating Company within a Capital Group, which consists of five subsidiary companies. Offer of the Mostostal Zabrze Capital Group includes works starting from engineering and related services, to general construction works, earth works and road works, manufacturing and installation of steel structures, delivery and installation of piping to mechanical systems and installation of process equipment. Mostostal Zabrze Group has highly qualified engineering, technical and production staff. Mostostal Zabrze brand is present in Poland and in foreign European markets, as well as in other parts of the world, including South Africa, Russia, Libya, Iraq. The company owns a Technical Bureau in Germany, which maintains continuous monitoring of the German market, looking for new contracts. Current offering includes: production (steel structures, civil structures and machinery, non-standard steel structures and highly specialised steel structures), pipeline works (engineering, delivery, prefabrication, supervision and installation, preparatory works and pressure tests), mechanical works with commissioning of power and industrial facilities, service-related works (cladding, insulations, laser joint sealing, non-destructive testing).

Navimor Invest S.A.

Polish company

Navimor-Invest Sp. z o.o. was founded in 1991. Navimor-Invest operates in hydraulic engineering and construction businesses. It is specialised in hydraulic engineering projects, as well as construction and upgrades of protection measures against floods. The company also executes numerous projects aimed at construction of modern tourist infrastructure. It participates in upgrades and extensions of sea ports and other facilities on the Polish coast. Its offer includes construction of harbour installations, seawalls, quays, locks, hydroelectric stations, river regulation, dredging, as well as development of ports and coastal infrastructure: construction of access roads, culverts, port buildings, hangars, port offices, mooring bollards, fenders etc. Main activities in marine engineering include construction and renovation of quays, construction of piers and seawalls, yacht harbours, execution of specialised underwater works, dredging and refilling. Main activities in inland hydraulic engineering include: river regulation, bank reinforcements, construction of locks, dams and weirs, construction of yacht harbours, construction and overhauls of hydroelectric plants, dredging and refilling. Civil construction: access roads, culverts, port industrial and administration buildings, hangars, design and construction of green areas, specialised services such as: repairs of reinforced concrete structures, demolitions, hacking off, application of anticorrosive coatings. Construction of steel structures: quay accessories such as mooring bollards, ladders, fenders etc., quay structures such as tie rods, roof ties, steel poles; accessories: footbridges, slipways, corrosion protection.

Polimex-Mostostal S.A.

Polish company

Polimex-Mostostal S.A. is divided into four businesses: Power Engineering and service, Petrochemistry, Infrastructure Construction, Production. The company offers comprehensive services in engineering construction for road and railway infrastructure, and environment protection solutions. Polimex Power Engineering offers services within: turnkey power plant construction, engineering, overhauls and upgrades, industrial service, environment protection, transformer, diagnostics and technical tests, installation of power boilers, installation of turbine-generator units, specialised installation works for steel structures, deliveries of steel structures. Polimex offers comprehensive deliveries of power plant projects, especially for combined heat and power plants, power plants, heating plants, coking plants and distributed power generation. The company is also involved in overhauls and modernisations of: power generation units, steam, water and oil boiler with auxiliaries, steam and gas turbines with auxiliaries, environment protection equipment (flue gas desulphurisation, electrostatic precipitators), transformers up to 160 MVA, vessels, low and high voltage electric motors, industrial machinery and equipment. Company's business is complemented by production of spare parts for maintenance. In environment protection sector Polimex offers complete flue gas desulphurisation plants, sewage treatment plants, water treatment plants, as well as upgrades and extensions of such systems. It is also specialised in building drying facilities and waste incineration plants with biogas systems.

Przedsiębiorstwo Usługowo  
Produkcyjne Gotech Sp. z o.o.

Polish company

PUP GOTECH Sp. z o.o. is a contractor in conventional and nuclear power sector, offshore and industry - process installations and environmental protection. Key fields are construction, upgrading, overhaul of industrial and power generation systems. The scope of works includes: products manufacturing of carbon, stainless, acid- resistant and special steels – steel structures, support structures, ducts, electrostatic precipitators, coal bunkers, pipelines, silo, tanks, absorbers; erection - IOS, NOx installations, flue gas systems, dust/air mixture lines, electrostatic precipitators, incineration plants technological systems, pipelines; retrofit - power boilers pressure part, mills, feeders, primary air/coal, ducting, pipelines, rotary air preheaters, district heating systems, air, water and gas systems, chemical installations. As a General Contractor Gotech offers also comprehensive turnkey construction of production facilities through implementation of all investment stages – design, building permit, performance in all branches, operation permit. We provide services and products for reputable European and non-European companies from the power generation, chemical, oil processing, steel, paper and wood processing industries, shipbuilding industries and others.

Prochem S.A.

Polish company

PROCHEM is an engineering company which designs and builds industrial systems, general construction objects, industrial plants, oil and gas facilities, power plant facilities and environment protection systems. The porjects are delivered on comprehensive turnkey basis from design concept up to delivery. In construction discipline, the company designs and builds large volume buildings for offices, education, commercial and storage purposes. It offers either turnkey deliveries or individual services within an investment project, such as: engineering, EPC delivery, EPC management, supervision on behalf of the investor, project management / construction management etc. Company is able to extend and upgrade existing building structures such as: office buildings, shopping malls, storage and logistics centres, university buildings, public buildings. PROCHEM participates in complex power engineerng projects, collaborating with other companies operating for that business, especially for commercial power engineering and industrial CHP plants. References include CO2 handling systems (carbon capture plant) and renewable power generation plants, including incineration of municipal waste and sludge. PROCHEM also acts as a technical adviser for banks with regards to the construction of wind farms funded by those banks.

Promus Katowice

Polish company

PROMUS Katowice is a company which provides comprehensive services in design, production and installation of steel structures for the automotive industry and general buildings. The company specializes in steel constructions. PROMUS Katowice offers a wide range of support structures which allows the company to be a single contractor in projects of constructing new process lines in industrial plants and other enterprises. PROMUS offers construction of steel structures in accordance with the customer's designs or an option to use the services of its designers to create such a design. The steel structures offered by PROMUS include support structures for conveyors, machines, operating stations, beam grid structures to support entire process lines, stairs, ladders, guard rails, fencings, steel frames for industrial building and other structures, roofs, connectors. Other sectors of expertise include: transport systems, montage, construction works and conveyors. The company operates mainly in the Silesia region in Poland but also in other regions and abroad in Europe.

Przem-Bud Sp. z o.o.

Polish company

Przedsiębiorstwo Budownictwa Przemysłowego “Przem-Bud” Sp. z o.o. is a Polish construction company. It is specialised in industrial and specialised constructiton of various structures and boring through reinforced concrete. Activities are performed thanks to the engineering and technical personnel and highly qualified construction workers. Currently the company focuses on construction of industrial and storage facilities, foundations and facilities for power and CHP plants, reinforcements, reconstructions, reprofilings and repairs of load-bearing structures: turbine foundations, silos, tanks, settling chambers, stacks, tunnels, process bridges, foundations of equipment and structures of complex shapes, application of chemical-resistant water-tight coatings of epoxy and polyurethane resins, acid-proof flooring, demolition of reinforced concrete, concrete and stone structures: dust-free cutting of reinforced concrete, concrete and stone structures with diamond saws, traditional demolition with pneumatic hammers, construction and upgrade of water reservoirs. The company offers services of sanding, hydraulic abrasion, drilling through reinforced concrete and concrete structures, repairs and reinforcement of ferroconcrete structures by gunning and finishing construction works. Services for reinforced concrete strucutres use technologies from material producers who offer fixing systems like PAGEL, SIKA CHEMIE, DEITERMANN, WEBAC, SCHOMBUR, as well as own solutions and products.

Przedsiębiorstwo Budowy Kopalń PeBeKa S.A.

Polish company

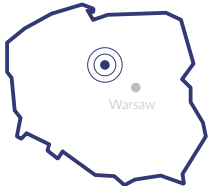

Przedsiębiorstwo Budowy Kopalń PeBeKa S.A. is construction company localized in Lubin. For 55 years the company provides services in regular and technical construction works. It executes projects of underground and above ground constructions for mining industry, transportation and other industrial operations. Recently, PeBeKa has performed also works in environmental protection. PeBeKa possesses the technology to dig and deepen mining shaft using the method of freezing geological structures. The company has an advanced industrial park which allows for comprehensive execution of contracts (from design to handover) and has allowed PeBeKa to expand to other industrial branches beyond mining like transportation, production and environmental protection. For 20 year the company has had its input in the construction of the Warsaw underground rail network. It built over 5,4 km of tunnels, constructed 2 stations: Raclawicka and Politechnika and built a 100m log underpass beneath Trasa Łazienkowska. In October 2008 a large transport hub in Młociny was handed over for operation. Przędsiębiorstwo Budowy Kopalń PeBeKa S. A is a member of the KGHM Polska Miedź S.A. holding.

PHU Siećbud Sp.z o.o.

Polish company

The current scope of business deals that engineering works - construction done on a “turnkey” basis. The company has a possibility of keeping the construction works and execution of a comprehensive range of investment works in a General Contractor with a small investment, starting from the design phase. The company has its own permanent headquarters and transport - hardware base. The company has a permanent staff of administrative - technical and managerial knowledge with necessary building and energy permissions to lead the offered scope of works. The detailed offer of the company is contracting technical projects (internal systems which, boiler room of ecological, external plumbing, heating network of pre-insulated), technical consultancy for energy systems, construction and modernization of boiler water and steam to liquid fuel and gas, construction and modernization of nodes heating, central heating and water. - Sewage, heating networks with pre-insulated pipes, construction of water intake and external water supply, sewage treatment plants and sewerage collectors, construction of low Cubic and equipment services (backhoe - loader CAT 432D, CAT 315M wheel excavator, backhoe CAT 320C Excavator).

Inkom Sp. z o.o.

Polish company

Przedsiębiorstwo Innowacyjno-Produkcyjne Inkom Sp. z o.o. takes part in execution of projects in the construction sector for various branches of the inddustry. The main area of activity is specialist land constructions and hydro works. The company specializes in foundation piles including drilled piles ranging from 400mm to 1500mm in diameter accomplished using 3 technologies: Continuous Flight Auger, drilling with side protection using a telescopic multiple use pipe, drilling with side protection using a bentonite slurry and other general construction works. The company also executes constructions of slurry walls of 600mm up to 1200mm thickness in various configurations: Pure concrete, reinforced concrete, as support structures for bridges, tunnels, underground walkways and ecological noise barriers. The company owns professional equipment required to perform its all offered services. Most machines are made by a German manufacturer BAUER. These include piling drills, trucks, compressors, power generators, compactors, welders, elevators, scaffoldings, shorings, electrical tools etc.

Przedsiębiorstwo Produkcji  
Mas Betonowych Bosta  
Beton Sp. z o.o.

Polish company

PPMB Bosta Beton Sp. z o.o. is a manufacturer of ready-mix concrete since 1990. Further development was boosted by establishing close cooperation with the Finnish company Lohja Rudus Oy Ab in 1996. The company has a fleet of mobile concrete production facilities used for construction of roads, motorways and bridges. The network of production facilities offers following types of concrete:

- standard ready-mix concrete C8/10 to C50/60 and high-strength concrete C100/115
- special concretes (normal ready-mix)
- concretes used in trasnport infrastructure (normal ready-mix)
- light concrete - LECA concrete (normal ready-mix)
- floor concrete (normal ready-mix).

The production is carried out at automated equipment manufactured by Liebherr, Stetter and Skako. To ensure convenience for customers, the plants are located in 9 points of the Warsaw urban area and more than 40 sites all over Poland. The plants are equipped with Polarmatic and Kroll heating systems which enable deliveries of warm concrete at ambient air temperatures from -15°C. Production plants are provided with equipment cleaning stations and concrete recycling equipment. Bosta Beton’s in-house laboratory ensures regular control of production, as well as research and implementation activities.

Dźwigpol S.A.

Polish company

The production plant manufactures personnel and cargo elevators and many other components for lifting euqipment. Many years of experience and high production potential of the company have enabled it to extend its offer with new groups of euqipment: personnel elevators, hospital elevators, elevators for disabled persons, lifts built to order - driven electrically or hydraulically. It also offers elevators with top or bottom machinery room, with a capacity of 100-6000 kg and their components. The customers include: hotels, banks, theatres, modern residential developments, foreign investment projects, companies and production facilities. PPUD Dźwigpol S.A. is a manufacturer and supplier of many elevator components. It offers: semiautomatic doors with security locks of own design or from external suppliers (Schmersal, Kronenberg), double door, single- and dual-bolt security locks, metal cabins, cabin frames, foundations for drives, speed limiters, catching equipment, landing fixtures, control panels. Control systems for all kinds of elevators are equipped with microprocessor controllers. The company also offers modernisation of existing elevators with possible replacement of components such as: metal cabin with automatic door, frame + platform, control equipment, electrical accessories (button panels, position display indicators), counterweight, drive, shaft doors, speed limiter.

Przembud S.A.

Polish company

PRZEMBUD GDAŃSK S.A. started operations in June 1945. It is a Polish construction company. As an EPC contractor the company operates both in industrial and general construction sectors. PRZEMBUD GDAŃSK S.A. has delivered many important industrial, residential and public buildings, as well as environment protection facilities in Poland and abroad. The company has highly qualified technical personnel. Personnel directly invoved in production management includes persons with higher or middle-technical education, most of whom are holders of unrestricted construction engineering and design certificates. Company’s offering includes execution of projects in: industrial civil engineering, general civil engineering, civil engineering in environment protection, reinforced concrete and steel structures, roads nad briges. PRZEMBUD GDAŃSK S.A. owns a fleet of own machinery, which guarantees freedom of using required equipment and transportation. It owns a concrete production plant, backhoe loaders, loaders, concrete mixers, tractors, delivery vans, semitrailers, thickeners and other required specialist equipment. Currently PRZEMBUD GDAŃSK S.A., except for construction services, also performs installation works: sanitary, electrical and mechanical. Recently the company has also started to rent specialist equipment like concrete mixers, 36 m concrete pumps, self-propelled crane with a capacity of 30 tonnes.

Rapid Sp. z o.o.

Polish company

Rapid Sp. z o.o. is specialised at construction and comprehensive renovations of industrial facilities. It performs overhauls of equipment such as cooling towers, silos, fuel tanks and bridges. It renovates and upgrades industrial halls, concrete and reinforced concrete structures, and provides corrosion protection for steel structures. The team consists of highly experienced staff. Many employees own certificates for working at heights, also with use of climbing equipment, for operating specialist euqipment and managing construction works. Construction projects are delivered as turnkey projects, and include all operations from the design up to commissioning of complete industrial facility. The company owns appropriate equipment and fully equipped technical facilities, which ensures high independence when executing projects. The current offer includes: sprayed concrete, construction of hydraulic engineering structures, renovation and maintenance of tall structures, construction of industrial facilities, overhauls of cooling towers and stacks, renovation and maintenance of concrete and reinforced concrete structures, protection of steel against conrrsion, enclosures and insulations; other specialist services, including: comprehensive upgrade of storage tanks for flammable and aggressive liquids, sealing storage tank containment trays, cutting concrete and reinforced concrete structures, reinforcing escarpments and dike walls, securing landslides by ground nailing.

Remontowa Shipbuilding S.A.

Polish company

Remontowa Shipbduilding S.A. Is a shipyard located in Gdańsk, which focuses on construction of small and medium vessels. It is a part of a capital group called Grupa Remontowa. The shipyard was founded in June 1945. Remontowa Shipbuilding manufactures modern ves-sels with lengths up to 130 m and beams up to 24 m. Main products are specialised vessels, such as offshore vessels, ferries, tugs, cargo vessels, specialised ships and warships. Remontowa Shipbuilding has a fitting out pier (Cn 100) with a length of 400 m, complete with necessary infrastructure and cranes (3 x 26 t / 17 m). Vessels built by Remontowa Shipbuilding are delivered with the full set of fitting out works: protective paintwork, piping, machinery, deck accessories, electrical and electronic systems, interiors. Remontowa collaborates with external companies, both customers and subcontractors. Ships built by Remontowa are flying colours of Denmark, Finland, Gibralt-ar, Germany, Norway, Vanuatu, UK, Italy and Poland.

Rollmex Sp. z o.o.

Polish company

Rollmex Sp. z o.o. is a specialised company operating in the con-struction market since 1989. The company offers: prefabrication of steel structures, including corrosion protection, pipeline elements, carbon or stainless steel vessels - at its production facility at Hutnicza Street in Gdynia - and installation of those components at sites. Within provided services, the company overhauls boilers, related equipment, tanks; it also overhauls and upgrades industrial systems and equipment. At its steel structure production facility at Hutnicza Street in Gdynia the company has a concrete yard with an area of some 4500 m2, two gantry cranes with a capacity of 5 tonnes and a production hall with an area of 1000 m2 and 10 tonne overhead crane, workshop with metal machining equiment, 2 pieces of rollers for bending metal sheets with thickness up to 38 mm, L = 3000 mm, insulation workshop, warehouse and social facilities, i. e. changing rooms, canteen, tool storage rooms. It also has a 7 x 24 m shed for painting and shot-blasting pipeline elements and steel structures. The company manufactures and delivers prefabricated large-sized silencers for ships operated by Danish companies, self-assembling portable drilling towers for customers in Norway and mobile con-crete production facilities for Finnish customers.

SBN Runowo Sp. z o.o.

Polish company

SBN Runowo Sp. z o.o. is a company based in northern part of Po-land which offers wide range of rebar steel for construction com-panies and manufacturers of precast concrete elements. Company delivers spatial rebars for reinforced concrete structures made of pressure welded reinforcing meshes B500A (made of corrucated rebars with diameters of 6 mm to 12 mm) and B500B (made of cor-rugated bars with diameters from 8 mm to 12 mm) by cutting and bending to any shape with maximum dimensions of: circumference 3. 2 m, length 6 m. SBN Runowo has its own structural strength test laboratory for evaluation of compliance of production, the produc-tion quality has also been controlled by Simptest Centre of Tests and Certification from Katowice, according to the System 1+ of the Construction Products Directive 89/106/EEC. The company offers rebars for reinforced concrete structures for the markets of Ger-many, Denmark, Sweden, Norway. The company holds a Technical Approval ITBAT-15-8530/2010 for pressure welded steel meshes B500B - Runowo for reinforcing concrete. The company received this kind of approval from the Building Research Institute of Warsaw for a product made of hot-rolled corrucated steel.

Scaffolder Polska Sp. z o.o.

Polish company

Scaffolder Polska Sp. z o.o. started its operations in 2001. Staff of the Scaffolder Group holds permits for installation and opera-tion of scaffoldings: Bygg/Star-Sweden , IMBiGS-Polish, CISRS-U.K., Par46-Norway and international certificates in the area of safety and operations in particularly hazardous conditions - for managers and line workers: SCC/SOS, SCC/BES, VCA/SHE, SSG, CSCS/ECITB, First Aid and certificates for operators of access equipment, electri-cal engineering certificates for operation and supervision. The staff has also been trained at the Joint Institute for Nuclear Research in Dubna near Moscow. Scaffolder’s staff provide scaffolding installations for foreign projects in Sweden, Belgium, France, Finland, Norway, UK, Ireland, the Netherlands, Germany, Lithuania, Bulgaria and Ukraine. Scaffolder actively participates in advisory and training operations (focusing on scaffolding knowledge) carried out by Rezultat company of Warsaw, addressed for energy and industrial sectors in Poland. Scaffolder Polska cooperates with industrial and energy sectors in Poland, and scaffolding manufacturers in Europe. It provides main-tenance services for construction sites in Poland and abroad; it also provides advisory services for investors concerning: maintenance, supervision and trainings.

SEEN Technologie  
Sp. z o.o.

Polish company

SEEN Technologies is a company which has been implementing comprehensive facilities and technologies that protect the environment. The Company operates on the domestic market and abroad, specializing in the field of water treatment technologies (filtration, adsorption, coagulation, disinfection, neutralization Cl2, flotation pilot station, regeneration of activated carbon), wastewater treatment (mechanical treatment, scrapers surface and Bottom, processing sludge, filtration third degree), industrial equipment (automation and measuring devices used to automate dispensing systems, intelligent coagulation and flocculation, measuring gas concentrations in the air, the concentration of residual: Cl2, ClO2, ClO3 in water, pH, Redox, temp., pressure, flow. Metering pumps comprising: waste water, viscous liquids, liquids containing abrasive, corrosive, radioactive or spontaneously. Yield offered pumps may be in the range of 0.4 cm3 / min to 30000 dm3 / h. stirrers - mixing systems offered by SEEN Technologies is a systems company Milton Roy Mixing. Lamps ultraviolet light for disinfection. The company implements projects for many sectors of the economy and industry, mainly in the power, chemical and mining branches.

Skanska S.A.

foreign company

Skanska is a construction company and a developer. In the Polish market it is present through three units: Skanska S.A. construction company which offers general construction, Skanska Property Poland responsible for developer activity, and Skanska Residential Development Poland, a developer of innovative residential buildings. Skanska in Poland acts as an EPC contractor of facilities in all market sectors. It executes contracts for automotive, pharmaceutical, furniture, house appliance production and metals industry, hotel and retail chains, as well as public investors. Skanska offer for industrial and power sector includes construction of water intake and treatment facilities, pumping stations, water reservoirs and pipelines. Design, production and installation of steel structures using during construction: masts and towers, construction hardware (stairs, guard rails, platforms etc.), special purpose equipment, e.g. power lines. The company owns own testing laboratory in Kraków, which provides services such as: laboratory testing of soils, in situ investigation of soils, tests of concrete mixtures, tests of cements, tests of aggregates, tests of concrete, tests of mineral-asphalt mixtures, non-destructive testing and TV inspection of ducts.

Soletanche Polska  
Sp z o.o.

foreign company

Soletanche Polska Sp. z o.o. is specialised at deep foundation works, underground construction works, soil improvements and environment protection. Soletanche Polska offers a number of technologies for deep foundation works, such as: drilled and driven piles, ground anchors, watertight membranes or ground injections, although the speciality of the company are diaphragm walls. The group operates in civil engineering and geotechnical services. The company acts as an EPC contractor for projects such as underground car parks, underground infrastructure, metro tunnels, storage tanks and drains, harbour structures. As a subcontractor it builds special foundations, performs soil stabilisation, reconstruction and renovation of facilities, excavations in urban environment and dams. To ensure high quality of offered products, the company is continuously monitoring the products using computer based systems Enbesol or Jean Lutz, and records parameters for further analysing. Soletanche Bachy Group has a large equipment potential for performing specialised foundation works. Thanks to the network equipment management system, the Group is able to quickly mobilise its resources.

Ventor Energi  
Sp. z o.o.

Polish company

Ventor Energi is a company focusing on industrial construction. Initially it was specialised mainly in industrial installations and ventilation systems. Then the offer has been enhanced with industrial insulations, steel structures and scaffolding systems. Today the scope of services includes execution of complex industrial constructino projects. The company is operating both as manufacturer of ventilation and air conditioning systems (with own production machinery), and as EPC (engineering, procurement, construction) contractor. The head office of the company is located in Dębica, Podkarpackie Voivodeship. In November 2010 a Norwegian division was set up in Stavanger. From then on, all projects located at Norwegian territory have been carried out by the new company Ventor Construction AS, a fully owned subsidiary of the Polish company Ventor Sp. z o.o. Current offering includes: ventilation, industrial installations (thermal and acoustic insulation of any type and comprehensive services from engineering to installation and material delivery), scaffolding systems and work on heights, welding with coated electrode (111) and TIG (141) methods, workforce leasing.

Zakłady Magnezytowe  
Ropczyce S.A.

Polish company

Zakłady Magnezytowe Ropczyce Spółka Akcyjna is a manufacturer of fireproof materials – base and aluminum-silicate, which are used in fireplaces and furnaces as lining, working in high temperature conditions. The company's offer is aimed mainly at the foundry industry: steel, non-iron metals, as well as cement and limestone industry, glass industry, forging and casting, coke industry and others employing high temperatures in their processes. The offer includes also comprehensive services related to fireproof ceramics. Zakłady Magnezytowe Ropczyce support their customers during the entire lifecycle of their products, beginning with technical consulting, construction and supervision and ending on maintenance. Designing and technical consulting is an element of the company's sales strategy and helps the customer choose the right products to fit unique requirements. The offered services include: design of linings and choice of materials, supplying the products, logistics and storage, construction supervision and construction works, monitoring product exploitation, maintenance works and modernizations, recycling, training programs related to the exploitation of fireproof materials, payments methods that suit the customer. The main categories of offered products are: formed kilned products, formed non-kilned products, unformed and non-standard.

ZUE S.A.

Polish company

ZUE Group is one of the construction companies operating in the business of railway engineering, as well as urban rail and power infrastructure, which combines companies with engineering, trade, production and construction works potential. The core activity of ZUE Group's comapnies involve design and execution - as EPC contractor - comprehensive construction and upgrade of tram and railway lines, along with auxiliary infrastructure (earth works, railway bed construction, drainage systems and engineering facilities and large buildings, including stations). ZUE S.A. constructs and upgrades power supply systems for tram infrastructure; builds and upgrades tram and railway power supply contact systems. Activity of the company also includes providing maintenance of urban infrastructure, i. e. tracks and contact systems, power supply and lighting. ZUE S.A. also builds complete power grids for commercial power industry. Development of comprehensive design documentation for transport networks is carried out via BPK Poznań Sp. z o.o. Trade and production activity of the group is carried out by Railway gft Polska Sp. z o.o. acquired in April 2015, which continues business operations of former ThyssenKrupp Gft Polska.

Anga Uszczelnienia  
Mechaniczne Sp. z o.o.  
Polish company

ANGA Uszczelnienia Mechaniczne Sp. z o.o. is a production company founded in 1981. The main office is situated in Kozy near Bielsko-Biała, Silesian Voivodeship. ANGA is specialised in manufacturing mechanical butt sealing systems applied in variety of machinery with rotating shafts, e. g. impeller pumps, mixers, reactors, compressors or fans. The company offers a wide range of mechanical seals: with bellows made of elastomers, metal and PTFE, multi-spring single and double, gas-dynamic (contactless) and compact (cartridge type). Seals are delivered along with auxiliaries and spare parts. Production is baseed on modern materials: silicon carbides, tungsten carbides, Al2O3 ceramics, carbon composites, titanium alloys, Hastelloy® etc. Main customers are pump manufacturers, final users of euqpmnt and maintenance companies working for many industries: chemical, petrochemical, energy, food, mining, cellulose-paper, pharmaceutical, watersewage and many others. Currently about half of the sales goes to foreign markets, including Germany, USA, France, Belgium, the Netherlands, Denmark, Spain, Czech Republic, Slovakia, Hungary, Ukraine, Lithuania, Russia, Kazakhstan or Switzerland.

CETCO Poland  
Sp. z o.o. S. K. A.  
Polish company

Cetco Sp. z o.o. implements coloid and polymer based technologies for environmental engineering and construction industry. The company manufactures active hydroinsulation materials and accessories needed to use such insulation. The company also manufactures consumables for mining and processes bentonite. A singificant part of Cetco's operations involves production of consumables for drilling applications. Polish office is located in Szcztyno, where also the largest Cetco production facility has been operating since 1998, along with a modern research and development laboratory. Polish departments are located in Warsaw, Wrocław and Zielona Góra. Cetco is a company with international scope of operations, which belongs to AMCOL International, founded in 1927 and listed on New York stock exchange. AMCOL is present on six continents in 68 locations - offices, production facilities and laboratories. In the area of geoengineering the company offers: upgrades of floodbanks, reclamation of waste landfills and insulation of roads located below the water table.

Ecol Sp. z o.o.  
Polish company

The Ecol company from Rybnik/Poland has many years of experience in nuclear power plants. Company performs work related to engineering, lubrication service and industrial cleaning. Professionally we clean and rinse the oil systems of turbines, cooling water pumps and other oil installations, especially flushing pipes of the secondary circuit and the primary reactor. Our activity has a direct impact on the operational safety and reliability of the whole process. We offer the full scope of services of industrial cleaning dedicated to a specific device and type of removed contaminants. We are using the technology of hydrodynamic cleaning with high pressure water jet up to 3000 bar, as well as quick-abrasion techniques, deposits dissolving technique with the use of active chemical foam. We remove the industrial contamination with the use of hydrodynamic, chemical, jet-abrasive methods. The technology of hydrodynamic cleaning and flushing of the oil systems with turbulent oil flow rate is undoubtedly the only method of cleaning the oil systems, which guarantees so high effectiveness. We offer professional lubrication service, cleaning of heat exchangers, pipelines, cleaning of chimneys, removal of rubble from building demolitions and the remains from the refurbishments carried out at higher storeys of the buildings. We have the latest and independent Oil Laboratory in Poland with approval by Polish Accreditation Center according to ISO 17025 standard.

Gambit Lubawka  
Sp. z o.o.  
Polish company

GAMBIT is a polish manufacturer of gaskets and thermal insulations. GAMBIT produces gasket with high resistance parameters intended for use in technical processes where contact with a wide range of technical mediums (air, steam, gas, oil etc.) and extreme working condition (high pressure, high temperature) occur. The gasket are made out of composite aramid and inorganic (non-asbestos) fibers. The company offers gasket in many variants (spiral, metal, semi-metal, metal-plastic, rubber), but also braided sealants, thermally insulating materials (ropes, vacuum formed products), friction materials (weaved and formed), connectors made out of temperature resistant and chemically resistant materials (up to 1000°C). The industrial park consists of lathes of working diameter between 560mm and 2000mm, milling machines, electric arc erosion machines, flat surface grinders. Moreover GAMBIT owns CNC machines to produce rubber moldings, injection and stretch blow moldings, cutters, stamps and matrices as well as precision tools according to clients' specifications and scientific tools.

INBRAS Energoserwis  
Sp. z o.o.

Polish company

INBRAS company operates in the production and sales of sealing materials, structural elements made out of plastic, connectors made out of rubber, steel or fabric and fabrics for general technical use. The company's products are used in energy, heat, food, paper and mechanical industries as well as in other branches of the economy. The offer includes: gaskets (flat, spiral, multiedge, mechanical, gasket plates), connectors (fabric, rubber and steel), sealants (permeated cotton, aramid, graphite), PTFE plates and tapes, thermoinsulators, fabrics, felts, elastomers, polymer composites for use in machines and steel and concrete structures. INBRAS possesses well-developed production and distribution departments allowing the products to reach construction sites around Poland in 24 hours. All gasket are cut out using CNC cutters. The company uses such materials as polymers – PTFE, PEEK, polyethylene (PE), polyamide (PA), polyoxymethylene (POM), polypropylene (PP) and PVC. For two years the company has been running a laboratory located in Tarnów conducting research in fabrics and plastics. INBRAS connectors are used in Poland and Europe in SCR, IMOS installations and dust collectors.

Temtech Sp. z o.o.

Polish company

Temtech Sp. z o.o. is an enterprise operating in the field of material, rubber and steel connectors for pipes. It cooperates with companies such as Gambit, Lubawka and Polonit as well as foreign manufacturers Klinger, Frenzelit, Garlock and James Walker. This partnerships allows the delivery of gaskets, gasket plates, EPDM (ethylene propylene diene monomer) rubbers – resistant to ozone, steam, light acids, bases and glycols, NBR (Acrylonitrile Butadiene) rubbers – resistant to oils, non-dissolving gases and air, CR (Polychloroprene) rubbers – resistant to atmospheric ageing and diluted acids and bases, FKM (Fluoronated Hydrocarbon) rubber – offering best durability parameters of all rubbers produced at Temtech. The company is also an authorized reseller of Gambit sealing ropes and offers own produced ropes made out of glass, limestone-silicon, ceramic and silicate fibers. The most common materials in Temtech products are PTFE, polyamide, polyethylene, polycarbonate, PEEK, polypropylene, polyvinyl chloride and many more. The company produces also aramid, ceramic, polyester, silicate and glass fabrics. Additionally the company provides cutting services.

Metal-Gum

Polish company

The METAL-GUM company is a manufacturer of rubber and Teflon expansion joints in Poland. The company produces fittings to be delivered to the energy industry, nitric acid, paper and mining mainly for the purpose of flue gas desulphurisation installations and installations for the transmission of a thickened abrasive liquids. The current offer of a company includes: signaling devices compensators consumption protections against the effects of bellows rupture compensator, rubber elbows and arches used for dense media, expansion joints (rubber and non-rubber), expansion joints, steel designed to compensate for axial displacements of large values of up to 500mm. The company also manufactures elements with internal protective coatings, conical and cylindrical expansion joints, compensators Teflon designed for the chemical, food, pharmaceutical and energy sectors. They have a high chemical resistance and temperature, valves for PE, standard knives (with manual, pneumatic, electromechanical drives), knife lip pinch valves (wedge and hand-operated), carpet mills and sealing chains. The company also offers maintenance services which include: installation of valves, rubber flooring of ball mills, participated in the start-up of our equipment, replacement of worn parts, regulation of drives.

BIRETA

Professional Translations Areta Kempieńska & Joanna Woźniakowska s.c.

Polish company

Specialized in translation services for power, oil & gas and environmental protection sectors. It is the only translation agency recommended by the Polish Chamber of Power Industry and Environment Protection. Efficient processing of large-scale technical translation projects requiring even several thousand pages translated per month. Translations covering the tendering phase, commercial negotiations and contracts right through to implementation of project documentation and training courses. Translations of technical documentation relating to, construction of power units, Combined Cycle Power Plants, CFB boilers, FGD plants, denitrification plants, electrostatic precipitators, LNG Regasification Terminal, LPG terminal and other. In place a two-stage quality control system - the translated text is always reviewed by another translator and a proof-reader. Developing a terminology database and glossary for each project guarantees consistent use of terminology in translated texts. The translators and proof-readers that work for Bireta are specialists in their particular fields – construction engineers, IT specialists, automatic control engineers, electrical engineers, mechanical engineers.

Centrum Naukowo-Przemysłowe EMAG S.A.

Polish company

CNP EMAG S.A (Scientific and Industrial Centre EMAG S. A.). provides a bundle of innovative systems, products and technologies, offering full cycle of turn-key solutions, in accordance with customer’s requirements – from research phase, through design, production, up to implementation, training and service. CNP EMAG S.A. manages a group of scientific institute and five companies, which elaborates and delivers systems and devices designed for: power supply, control, automatics, ICT, telephone and alarmbroadcasting communications, personnel and asset location, geophysics, process monitoring and visualization. The systems offered by the group are components of the integrated intrinsically safe industrial safety system SILESIA. CNP EMAG products have been for many years successfully implemented in mines and various branches of industry, characterized by difficult environmental and network conditions as well as explosion hazard zones. CNP EMAG is also involved in projects dedicated for ICT, public and national security and medical technologies. It also provides solutions for specialized customers, including local authorities, public administration, health service, environmental protection, railway and the army.

Energoprojekt  
Katowice S.A.

Polish company

Biuro Studiów, Projektów i Realizacji Energoprojekt Katowice S.A. operates since its inception in the field of designing power units fueled by lignite, coal, oil, gas and any combination of those fuels. The designed boilers include conventional, supercritical, fluidized bed and stoker types. EPK is responsible for hundreds of power unit projects for power plants, combined heat and power plants and heat-only boiler stations as well as a couple of diesel power plants abroad. Energoprojekt is a well-recognized engineering company in Poland and United Kingdom of Great Britain and Northern Ireland, Bosnia and Herzegovina, Belarus, the Czech Republic, Denmark, Finland, Greece, the Netherlands, India, Germany, Nigeria, Portugal, Russia, Romania, Turkey and Ukraine. Biuro Studiów, Projektów i Realizacji ENERGOPROJEKT-KATOWICE S.A. belong to a group of largest companies in the power industry and is one of the largest companies overall. The engineering crew possess all necessary authorizations. EPK offers services in preparing and execution of large power units. The company has several departments: automation, construction, heating, electrical, financial and economical, structural, mechanical, hydro chemical, installation and environmental protection. All of them take part in projects carried out in Poland and abroad.

Energoprojekt  
Warszawa S.A.

Polish company

ENERGOPROJEKT - WARSZAWA S.A. is a consulting and engineering company working for the power industry, providing advisory, comprehensive design and EPC management services. The company has designed power plants with a total capacity of 25,618 MWel and 13,308 MWth - more than 200 power generation uits, boilers and turbine-generators at power plants. As an engineering office it creates multi-discipline technical documentation for all project phases, following European, Polish, German, Russian or American standards. It offers consulting services: techno-economic, financial and environmental, also for special facilities, as well as CHP plants and heating plants in Poland and abroad. ENERGOPROJEKT - WARSZAWA S.A. from its foundation has been developing designs of hydroelectric plants as renewable energy sources. Almost 85% of capacity installed in Polish hydroelectric facilities has been designed by this company, including Solina Hydroelectric Plant with reversible turbines (137 MW, later uprated to 200. 2 MW). As EPC contractor the company offers full scope of services, starting from coordination of engineering works and procurement, up to all the activities related to acceptance, commissioning and putting completed facility into commercial operation.

Energotechnika  
-Energorozruch S.A.

Polish company

ENERGOTECHNIKA-ENERGOROZRUCH SA It provides services for the implementation of investment projects, modernization and maintenance for power plants and industrial and municipal sectors. The company operates in the field of ecology by performing the measurement and optimization of the equipment, the effect of which is to achieve a reduction of negative impacts on the environment through energy facilities in operation. As part of the modernization works Energotechnika-Energorozruch SA deals with: the reduction of NOx, a deep reduction in NOx external mill feeding biomass systems to boilers, improving the energy efficiency of boilers, lowering the technical minimum of boilers, modernization of mills and fans, the introduction of systems of combined firing of biomass by direct injection into the combustion chamber, research work related to the elaboration of new technologies boiler. By using modern technology the company achieves high performance such as: the work of NOx emissions in the range of 180-200mg / mn3 calculated at 6% O2 for boilers of furnace tangential to work with NOx emissions in the range of 230-300mg / mn3 based on 6% O2 boiler leading to the furnace, the level of CO of less than 50 mg / Mn3 based on 6% O2, maximum use of the existing furnace systems.

Fosa Sp. z o.o.

Polish company

The Fosa company provides services in the field of risk monitoring, namely ensuring the safety of persons and protection of property in monitored objects. The basic monitored threats include burglary, robbery and fire. It is possible to monitor other risks, such as temperature, gas concentration, humidity, smoke, flooding, etc. The offer that is directed to the security companies includes alarm systems (wireless or wired - depending on the technology and size of the object). In large buildings with a doorman or a security guard on duty, the company offers display panels which indicate the location of the alarm (diode on the plan of the building, or number of the room) without reading the alarm. Moreover, the offer for companies includes mounting of security devices such as: access control systems (intercoms and video intercoms, working time control systems, entry control systems to various parts of the plant or company (proximity card readers, etc.) And CCTV systems and technical fire protection systems. The company also offers all types of panic buttons and remote controls and medical lightings. It has a Training Centre, conducting specialized training.

Prozap Sp. z o.o.

Polish company

Prozap Sp. z o.o. is a design bureau operating in the construction market since 1970, originally as the Design Office of ZA “Puławy”, participating in designing and building chemical factory complex in Puławy. The company provides complex engineering services for the industry in Poland and abroad. Prozap Sp. z o.o. has adopted advanced computer aided design (CAD/CAM) systems. The main customers of Prozap are: chemical and petrochemical industry, environmental facilities, emission reduction projects (dedusting of urea granulation tower), sortage and packaging, power industry and district heating (flue gas desulphurisation - detailed engineering, as-built documentation, designer's supervision), food and pharmaceutical industry; general and residential construction projects. Prozap offers following services: project development assistance, engineering, construction (project management on behalf of investor during construction stage, including supervision of construction, interim and final acceptance, control of budget and schedule, subcontractor management, equipment procurement, including tendering and negotiations with suppliers, as-built documentation) and commissioning (engineering supervision, mechanical and process commissioning, crew training, development of operation and maintenance manuals).

Biprohut Sp. z o.o.

Polish company

The BIPROHUT company has started business by performing the functions of design and execution in heavy industry - mainly in the steel industry. Today it is a modern design office with a versatile field of activity. The company's headquarters are in Gliwice, located in the Polish industrial center, has a good combination of rail, road and water transport with other Polish regions. The company specializes in multi-discipline design in all subsequent stages of investment projects, objects, installations, production lines, industrial equipment, general construction and associated infrastructure. Steel industry, engineering, chemical, power and other industries are areas that represent the specialization of the company. Engineering services include technical consulting, legal and economic pre-design phase, implementation, concepts, studies and analysis, environmental applications, basic and construction projects for building permits, implementing projects and workshops, supervisions, and a broad range of investment management tasks. In addition to the activities of the project, BIPROHUT has properties with a total area of over 21000 m2. Currently, more than 50% of engineering services are carried out by the company for industrial construction in the chemical, energy and automotive industry.

PRRIK Inkom Sp. z o.o.

Polish company

PPiRIK Inkom was founded in 1991 in Białystok as a limited liability company. The object of company's buisness is delivery of comprehensive services for construction projects involving multidisciplinary design documentation, along with obtaining building permits. The company specialises at planning investments in environment protection facilities, municipal services sites, district heating, public buildings, residential development, general construction and industrial facilities. The main strength of the company lies in its experienced engineering personnel. The core of the company consists of engineers in sanitary, electrical and road building disciplines. Except for full time workers, for large specialised studies the company uses services of collaborating team of experts, surveyors, architects, designers, process experts, geodesists and geologists, hiring them for specific project tasks. The company also serves architectural studies all over Poland, poroviding them with documentation of sanitary systems, electrical systems and low-current systems, as well as roadwork studies. Experience of the designers, computer hardware and specialised software allow the company to create documentation and designs for: sewage networks, water supply networks, heating networks, gas networks, power networks, water, heat and gas distribuiton systems, ventilation systems, process systems, electrical systems, heat exchange stations, industrial boiler stations, sewage treatment plants and water treatment units.

SBB Energy S.A.

Polish company

SBB ENERGY S.A. – former Remak-Rozruch S.A. has been operating in the power engineering industry for more than 20 years providing consulting, commissioning, installation services and other various specialized works. Primary activities include: full scope commissioning of power units, optimization of power equipment and systems, multi-discipline erection/installation and overhaul services in power engineering and industry, commissioning and optimization of water conditioning and waste water treatment plants, chemical cleaning and acid cleaning of systems and equipment in power sector and industry, laboratory testing that allows the development of optimization procedures for the chemical cleaning processes performed, installation of electrical and I&C equipment together with the supply of related equipment and switchgears in the power sector and industry, retrofitting of NOx emission reduction equipment on boilers on a “turnkey” basis, biomass repowering and biomass co-firing of boilers on a “turnkey” basis, Specialist expertise in the operation of power plants, Supervision and maintenance of mechanical, electrical and process operation in energy facilities.

Vitreo Sp. z o.o. Sp. k.

Polish company

Vitreo has begun its activity as a consulting company specializing in restructuring of industrial plants and expertise in pipework made out of glass-reinforced plastic. The company has carried out projects for the largest power plants in Poland and abroad including such installations like Pątnów, Bełchatów and in Denmark and Sweden. Today Vitreo is also a manufacturer of pipework, tanks, silos, profiles and more. The company offer also services in design, construction and other branches of support for the power, heat, chemical and biogas industries as well as others. The company's products are made with plastic reinforced with glass, carbon or basalt fibers. The materials is created by saturating glass materials such as mats, fabrics and ropes with various hardening resins (usually polyester, epoxide or vynilester resins). The company owns 2 production sites and has access to a high-tech production of industrial composite material due to a deal signed with PARP. The company also has an advanced design bureau operating on software such as CAD, Solid Edge and CAM.

Energopomiar offers measurement, analytical and advisory services concerning: equipment for power generation, energy conversion, thermal and mechanical processes, as well as energy-related chemistry and environmental protection. Company's operations also include acting as contract engineer, comprehensive project management, investment advisory (including: project development, tender organisation and management), non-destructive examinations of equipment wall thicknesses, flaw detection at pressure components in power generation units, metallography, evaluation of material wear on power generation unit components, post-installation etching and removal of deposits from power generation equipment, investigation of impact of waste repositories on water environment, atmosphere, soil, forests, as well as noise measurements. The company offers comprehensive packages of acceptance tests performed prior to plant take-over into commercial operation, carried out due to transmission system operator's requirements, acceptance tests of power units providing ancillary services for the transmission system operator, tests of turbine regulator units, warranty and operational performance tests of power units. The company carries out expert works related to environmental protection – supervises equipment upgrades which lower environmental footprint and construction of new environment protection facilities. The company also offers tests of fans, blowers, pumps, compressors, cooling towers, turbine-generator units and complete power generation units.

# Electrical, automation control

82

ABB Sp. z o.o.

foreign company

Manufacturer of electrical and automation equipment. The company owns eight plants operating in Poland: Nowa Wieś Lęborska is a site of ABB Entelec company which manufactures low voltage equipment, electronic components and instrumentation & control products. In Przasnysz there is a production plant for medium and high voltage equipment, the factory is one of the most modern in Europe. In Aleksandrów Łódzkzi there are two manufacturing plants of electric motors and power electronics. Factory in Łódź is the largest ABB production plant in Poland and one of the largest factories in the world which produces transformers. The Wrocław production plant is a leading supplier of low voltage switchgears in Europe. In Kraków there are two plants which investigate modern solutions for power engineering and automation, as well as IT systems centre. The company's offering includes production of: transformers, insulation components for transformers, electric motors, MV drives, LV switchgears, MV and HV electrical equipment, voltage and current transformers, switches, surge arrestors. Design of: automation systems, power plants, fuel-energy technologies. Key products include substations and their equipment, as well as station automation and instrumentation, flexible AC transmission systems (FACTS), high-voltage DC systems (HVDC), as well as grid management systems.

Apator Control Sp. z o.o.

Polish company

Apator Control is a company with Polish capital which produces power electronic devices and switching control. The organization of Apator Control consists of two divisions of the course: Drive Centre - dealing with a wide spectrum of problems of drive automation, Center Of Distribution And Control Devices which operates within the field of power supply devices, switchboards and control. The cooperation covers many foreign companies, among others, companies such as Emerson, Contro Techniques, Leroy Axor Industries, Trio Motion Technology. The offer includes: the production and sale of drive automation equipment, frequency converters, thyristor controllers, PLCs and other industrial automation systems design, modernization of industrial machinery and technological lines, container transformer substations, switchgear and MV and LV connections and control cabinet resolution. The differentiating the company completed projects worth mentioning: Modernization of the water pumping station for the city of Kielce, assembling a set of power supply and control type of ASQ for Power Plants Coast Kielce, assembly-controlled cranes bridging the Azoty Group or towing a bridge project for CTO SA The company also runs training schemes for customers using the products offered.

84

Apator S.A.

Polish company

Apator company, a part of a Capital Group, provides following services: energy metering (electricity meter, smart metering, energy management in industry), gas metering (gas meters, smart gas meters and gas meter maintenance), water and heat metering (water meters, flow meters, flow transducers for heat meters). The company also supplies IT solutions such as remote monitoring of energy transmission, SID and WindEx system. It is also involved in power distribution by offering current transformers, isolation disconnecter switches, fuse bases, surge limiters, APASYS 60, auxiliary fittings or cam connectors of 4G series. One of the target markets is mining industry, which the company supplies with compressor stations, contactor starters, transformer stations, equipment for signalling and control, and sensors. The company also operates in automation business, offering programmable logic controllers, AC and DC motors, and also offers training courses and maintenance for such equipment. Apator group is a capital group which currently consists of fifteen companies - nine Polish and six foreign. Apator group operates mainly on markets of Central-Eastern Europe, in the area of switchgear components and instrumentation, as well as IT systems. The company has developed own solutions for metering and billing consumption of utility media (pre-payment and credit electricity meters, heat meters, gas meters, water meters, temperature sensors).

APS Energia S.A.

Polish company

APS Energia SA is a leading manufacturer of guaranteed power supply systems, which allow continuous operation of technological processes in case of power supply failure. Offered devices and systems are designed to meet 2, 3 and 4 safety class of nuclear industry standards. Broad range of manufactured systems includes: switching inverters, rectifiers and thyristor rectifiers for supply different kind of loads and charging batteries. Standard versions of rectifier output are: 24VDC, 48VDC, 110VDC, 220VDC. Other voltage levels are possible on a customer request. Offered systems are characterized by a low harmonic distortion of the input current. In order to assure high reliability, fan less cooling systems are applied. The company offers full design, application, assembly, startup, warranty and post warranty services.

86

Atrem S.A.

Polish company

ATREM S.A. offers services related to broadly understood engineering support for large infrastructural and construction projects, i. e. Industrial automation, electrical power engineering and air conditioning. The company holds multiple industrial certificates and permits. ATREM's partners include international companies such as: Schneider Electric, GE FANUC, IBM, Microsoft. Since 2007 ATREM has been a part of a capital group together with CONTRAST company. Offer of the Atrem Group is addressed both to EPC contractors of large infrastructural projects and directly to investors. It offers services related to broadly understood technical support in areas such as: gas, liquid fuels, water, air conditioning, ventilation, heating, building technologies and environment protectino. The company also provides EPC deliveries of proejcts. In such a case it controls all chain of operations, from engineering, to construction (also EPC), to monitoring of operation and maintaining supplied systems. Package of offered services: consultations, advisory, development of conceptual and technical designs, equipment deliveries and commissioning, system software, technical and engineering supervision, financial control, installation works with commissioning, creaing as-built documentation, maintenance of all systems (during and after warranty period), operational monitoring.

87

AUMA Polska Sp. z o.o.

foreign company

The AUMA Ltd. company specializes in the design and manufacture of electric drives for the automation of industrial valves used in such industries branches as energy, water, chemical industry, petroleum and gas industry and mining. The range of products consist of multi-turn actuators including drives reaching the drive torque from 10 Nm to 32 000 Nm turn actuators of time from 25 Nm to 1 200 Nm, linear actuators, drives with levers, drivers, multi-turn and part-turn gears, linear and including levers reaching a moment of 360 000 Nm, as well as many types of test tools. The advantage of the products offered by AUMA are modular devices and global availability. The company offers consulting, sales, technical support and after-sales service of the product. Services sales and customer support services are provided by a global service network consisting of regional offices, sales departments, representative offices and a service center. AUMA works with companies from the energy sector worldwide starting from the design phase to implementation and verification support.

88

Automatyka Pomiary Sterowanie S.A.

Polish company

APS's offer consists of designing, implementation and production of prefabricates, as well as sales of industrial automation equipment. Currently the company offers services concerning: engineering (relevant to power supply for electric switchgears, bus bars, I&C systems, electrical protection of swichgears, LV, MV and HV substations, telemechanical systems, microprocessor control and monitoring systems), programming (PLC controllers, computer control and monitoring systems for industrial processes, distributed control systems), installation (installation of power supply systems, electrical systems, I&C systems, control and monitoring systems, cable routes, LV and MV cabling), commissioning (post-installation trials, tests, calibration, electrical measurements of LV and MV equipment, commissioning of automation, process commissioning, optimisation of automatic power supply transfer for lines and process facilities), calibration (calibration and testing of instrumentation, repairs of measurement instruments, transducers, recorders, frequency converters). Additionally the plant offers productio of: LV switchgears for the industry and construction business, LV powerdistribution siwtchgears, LV switchgears for powering I&C structures and for electricity distribution, protection of electric equipment in power industry and other industry against short-circuits and overloads (e. g. at transformer stations) and in utility facilities, as well as engineering, prefabrication, delivery, installation and commissioning of control cabinets.

Belmar Sp. z o.o.

Polish company

The company provides engineering and maintenance services related to all operations involving maintaining serviceability of pwoer supply systems in large industrial facilities, manufacturing automation, execution of mechanical, installation and civil engineernig works related to overhauls and new builds. The company owns buildings, land and technical equipment of workshops and studies needed to execute new build and overhaul projects, maintenance and technical servicing of industrial plants for all businesses. The company has a long experience in automation, measurements, construction of control systems, programming PLCs and operator panels, maintenance, overhauls and repairs of automation, instrumentation and control systems - electronic, pneumatical and hydraulic; overhauls of automatic valve control systems, overhauls of analytical and technical scales. Laboratory services involving verification of instruments for measuring: temperatures, pressures, flows; designing low and high voltage systems rewinding squirrel cage and slip ring motors running at voltages of up to 500 V; installation and overhauls of low and medium voltage systems up to 30 kV, mainteannce and overhauls of lifting equipment, tests of dielectric equipment - gloves, boots, insulating rods, voltage indicators.

90

BELOS-PLS S.A.

foreign company

BELOS-PLP S.A. is a Polish equipment of accessories for high, medium and low voltage power lines and LV substations, which operates for electrical power industry. Most HV, MV and LV line projects in Poland are carried out using own-produced equipment. The offer includes: equipment for uninsulated HV, MV and LV lines, substation fittings (including tube fittings), accessories for LV and MV insulated overhead lines, equipment for fibre optic lines, braided fittings. Currently the company manufactures around 2500 different products. Except for such equipment, Belos-PLP also produces components of power supply systems for electrostatic precipitators, including auxiliaries of rapping devices, such as: line bay cabinets, electrode rapper bay cabinets, own consumption cabinets, dampening resistors, high voltage switches, high voltage earthing switch, stand-off insulators, ground contacts, ground contacts/disconnectors for rectifier units, local control, protection, and signalling boxes, and control units for ash removal systems. Moreover the company provides general galvanisation and drum grinding for small components.

Bezpol Sp. z o.o.

Polish company

Bezpol company was founded in 1992 in Myszków. Bezpol has a wide offer addressed mainly to the companies related to commercial power industry: energy utilities, warehouses and industrial plants. The offer includes a wide range of high-, medium- and low-voltage surge arresters, insulators, line and substation fittings. The company manufactures equipment for transformer stations and earthing equipment; it also develops systems for automatic compensation of earth-fault currents and traction rectifier systems. Bezpol carries out intensive research and development aimed at finding new solutions for the energy industry. The company is specialised at manufacturing systems for automatic compensation of earth-fault currents as well as traction rectifier systems, developed in collaboration with scientific institutions. Current offering of the company includes more than 700 products. In 2015 the company has launched a new production line of current transformers built according to own design documentation. The company also owns a measurement laboratory, which offers calibration and testing of current/voltage transformers. Bezpol also offers metal sheet cutting on a plasma burner.

CES Sp. z o.o.

Polish company

Centrum Elektroniki Stosowanej CES Sp. z o.o. provides electrical equipment and devices. Since the beginning of its operation the company has focused on voltage converters and variable speed drives. In time the offer was expanded with power generators and uninterruptable power supplies. The company also supplies low voltage and medium voltage insulators. CES offers also montage of cogeneration systems for heat and power production (fueled with natural gas and biogas, trigeneration systems, polygeneration systems). Moving forward with the market the company also produces complete installations for biogas production. Centrum Elektroniki Stosowanej provides comprehensive works including montage, startup and repairs of electrical, power and biogas installations they supply and of other manufacturers as well. The full offer includes: uninterruptable power supply systems, variable speed drives, cogeneration systems, biogas installations and low and medium voltage insulations. The company's servicing department provides 24 hour technical support and develops new and innovative solutions and tests new devices.

DFME DAMEL S.A.

Polish company

DFME DAMEL S.A. in Dąbrowa Górnicza founded in 1940 is a manufacturer of electric motors (including those of special design), electromagnetic iron separators and other electric machinery and equipment. The company also offers engineering works and implementation of new technical solutions. The plant at Dąbrowa Górnicza manufactures around 100 different models of electric equipment, including asynchronous motors, electromagnetic separators and filters, control instrumentation and others. Services offered by DAMEL include diagnostics, maintenance and overhauls of electric machines and metal sheet cutting. DFME DAMEL S.A. manufactures specialist equipment and machinery present in the sales offer of the company: asynchronous induction motors, electromagnetic separators, cable inlets, end fittings. DAMEL's products are covered by attestations of the Polish State Mining Authority, and institutions of other countries such as Germany, Czech Republic, Ukraine, Russia or Spain. Flagship products of the company are asynchronous motors designed for operation in explosion risk zones, e. g. category I underground mines and category II rooms.

94

DFME Sp. z o.o.

Polish company

DFME is a designer and manufacturer of electric machines backed by some 70 years tradition, located in Wrocław, Poland, and direct successor of Dolmel. DFME is a fully equipped design, manufacturing and testing facility specializing in electric machines for difficult, special demand projects. DFME offers complete AC/DC motors and generators – both new machines as well as services or modernizations of the existing units, in particular large size units (5-200 tons weight). DFME is particularly good and experienced in high output and/or low speed units, also delivered as 1 to 1 replacement units for the existing machines for other OEMs. DFME has a number of references worldwide. Installed base of over 9000 large size units with the total output >10 GW. DFME offers all types of electric machines, including:

- Synchronous generators driven by diesel engine for continuous duty or standby power supply in nuclear power stations and local or industrial power plants, including biomass-fired plants
- Synchronous and asynchronous generators driven by hydro turbine
- Induction motors (squirrel cage motors, double speed squirrel cage motors, slipring motors, asynchronous synchronized motors) and synchronous motors, also as high efficiency permanent magnet synchronous motors, in standard or Ex design (Exp, Exn, Exe) for all applications
- DC motors and synchronous motors used as drives for hoisting machines in mining industry

Drut-Plast Sp. z o.o.

Polish company

Drut-Plast Sp. z o.o. is a manufacturer of cables and wires operating in Poland. Thanks to its long history of operations, the company is a renowned and proven supplier of cables and conductors using by leading companies, mainly in power industry and mining sectors. The offer includes following product groups: singalling and control cables, wiring for automation and data transmission, data transfer cables, power cables for mining industry, uninsulated power cables for 0. 6/1 kV and 3. 6/6 kV voltage levels, mining signalling cables, shaft cables for mining, mining telecommunication cables, METAN-Ex mining telecom cables for spark-safe circuits, mining signalling-telecom cables, optoelectronic communication cables for mining, mining concentric cables, coaxial cables, IT cables, custom-designed cables and wires for special applications. Currently company has two production plants in Wałcz and Mirosławiec, and a trade office in Katowice. At this moment Drut-Plast manufactures 6 thousand cable and wire designs and delivers them to more than one thousand customers in Poland and abroad.

Elektrobudowa S.A.

Polish company

Elektrobudowa S.A. provides comprehensive construction and installation services, working at projects related to power indsutry, pet-rochemical industry, mining and public utility buildings construction as EPC delivery. The company manufactures electrical equipment for switchgears, and switching components for low and medium voltage substations and power systems used by - among others - power industry, mining industry and railway facilities. The company offers technical advisory, while continuously increasing technical level of its products and services. It offers services involving monitoring and supervision of production processes, comprehensive project management - EPC construction, performance of construction and installation works; continuous improvement of product and service quality achieved in an environmentally friendly way which is also safe for customers. Elektrobudowa S.A., its products and full scope of electrical installation works are present in all new, extended and upgraded commercial power plants and most industrial power plants. It is also successful at construction of substations and facilities for power transmission and distribution. The company has experience in works for new nuclear power plants. The company is also able to provide EPC construction of building structures.

Elektromontaż - Poznań S.A.

Polish company

Elektromontaż Poznań S.A. performs electrical works at construction sites of industrial facilities in Poznańskie and Zielonogórskie Voivodeships. Elektromontaż Poznań focuses on power indsutry, office and hotel construction, commercial and storage facilities, industrial plants, transport infrastructure adn environment protection. The company specialises on strong- and weak-current systems for all those sectors, as well as mobile containerised equipment. The company manufactures all kinds of low- and medium voltage switchgears, including those for distributing three-phase AC power supply at nominal voltage of up to 17. 5 kV and 50 Hz frequency in distribution networks of industrial and commercial power plants, containerised untis (MAMRY, WIGRY in metal enclosures, with external or internal access, single- or multi-segment, universal, safe, reliable and portable) and provides engineering, modernisaton-related and installation services. For example a system of containerised MAMRY transformer stations in concrete enclosures in intended for operation at cable distribution networks of commercial and industrial power plants, in a ring or radial layout, with a nominal voltage up to 24 kV. System of container type distribution transformer substations in metal housing WIGRY is intended for operation in cable or overhead line networks of public utilities in ring or radial layout and for supplying various industrial consumers with electric energy (i. e. where drives of conveyor bands, pumps, fans, etc. are used).

Elektrotim S.A.

Polish company

Elektrotim S.A. builds electrical systems and networks, as well as automation systems for construciton business, industry and power industry. The company offers a wide range of products, which require both technical and organisational competences. Elektrotim is carrying out variety of tasks. It executes projects, which - depending on needs - may be based on standard solutions or require use of custom-built components. The company offers following product groups: electrical systems and installations, road building project management, building structure construction management, high voltage lines, grid substations, electric switchgears, traffic engineering, weak-current systems, construction projects, telecommunication networks, sanitary networks, industrial and power system automation, maintenance of signalling and lighting systems, maintenance of electrical and automation equipment. Elektrotim S.A. was founded in 1998. It delivers multi-discipoinary projects which involve selected industrial plants of the company and its partners. Within project management services, the company offers execution of industrial construction, hydraulic engineering, military engineering and road engineering projects. Those services are offered by the Project Management Division.

Elfeko S.A.

Polish company

ELFEKO SA - It is one of the largest Polish construction companies in the power sector, comprehensively supports infrastructure investments in the energy sector. Our company specializes in the execution of power in transmission and distribution networks, including power lines and power substations with voltage of 110 kV, 220 kV and 400 kV. The company has more than 25 years introduces new technology for the energy market and takes care of the quality of investments, thanks to the implemented systems ISO 9001: 2008 and ISO 14001: 2004. Employing more than 270 employees are able to realize their own potential, the biggest investments from the initial concept, through design and finishing on site. It has its own design studios: power lines of high and extra high voltage, power stations, steel structures and foundations. The staff of the studio is a few dozen designers from design building rights in various industries. Construction investment is engaged in a long track qualified executive managed by engineers with relevant building rights. In addition, since 2006 ELFEKO SA it has a certified laboratory measurements of electrical fields.

Emerson Process Management sp. z o.o

foreign company

Emerson Process Management is a supplier of innovative automation and control systems. The company focuses mainly on renewable energy source, industries: chemistry, food, biopharmaceuticals, metallurgy, mining, oil and gas extraction, oil refining, paper, energy (professional and industrial), water and sewage treatment. The main categories of Emerson's products are: measurement and analysis instruments (pressure measurements – multivariable pressure transducers, manifolds, nuclear instrumentation, flow measurements – pressure difference, Coriolis method, magnetic, vortex, ultrasound, turbine gauges for fluids, gas analyzers, liquid analyzers, temperature gauges, measurements of viscosity, density, gas chromatography, fuel level measurement systems), control (process management systems, SIS – Safety Instrumented System, automation, SCADA – Supervisory Control and Data Acquisition, operational management software, energy installation management and resource deposit management), adjustment techniques (rotary control valves, aseptic valves, slider valves, other valves used in process gas flows, liquid flows, steam flows, LPG flows, natural gas flows, adjustment actuators, cut-off actuators, multiway flow valves, cut-off valves and other equipment and accessories for valves).

Energotest Sp. z o.o.

Polish company

Energotest is specialised in: designing, procurement, supervising of installation, post-installation testing and commissioning of electrical power engineering systems at practically all newly built or modernised power plants, CHP plants, substations and industrial plants in Poland and abroad. Energotest experts have developed and put into production many innovative designs, including 200 generating units with outputs from several to 500 MW and dozens of grid substations. Energotest has its own team of engineers, who carry out research and development works, develop new designs - especially for power industry automation and LV/MV switchgear components. The offer includes automation components for electric power engineering (including automatic transfer switches, generator excitation systems) and switchgear components (voltage indicators, blocking relays, voltage transformers, earth-fault transformers etc.). Moreover the company develops solutions for automation problems. It offers EPC deliveries of automation systems for new-build projects, technical advisory at project development stage, detailed engineering, installation, software deliveries and commissioning.

EthosEnergy Poland S.A.

foreign company

EthosEnergy Poland S.A. for many years has been specialising in upgrading and overhauling generators and transformers, and manufacturing mechanical components for the power industry. Offered products and services are used by energy generators, distribution companies and other industrial companies related to power industry. The company's largest department is the Generator Plant. It carries out overhauls and upgrades of generators for commercial and industrial power plants. It also has experience in maintaining and servicing generators in Poland and abroad. The Generator Plant's offer also includes manufacturing auxiliaries for generators, such as dual-chamber hydrogen drier, bushing insulator or sealing oil supply station. The Transformer Plant is a specialised business unit involved in maintenance of high-power transformers (above 1 MVA). The Plant provides comprehensive engineering, production, modernisation, overhauls and maintenance of power grid transformers, power plant step-up transformers and autotransformers. The Mechanical Plant is a unit focused on manufacturing steel structures, parts of machinery (e.g. generator frames, transformer tanks, turbine components) and pressure equipment, as well as services involving machining.

Limatherm Sensor  
Sp. z o.o.

Polish company

The domain of company is production of control and measurement equipment, mainly industrial temperature sensors. Limatherm Sensor is a manufacturer of all types of temperature sensors from simple conductor sensors, head sensors, mineral insulated sensors, thermocouples and RTD. Sensors are produced entirely in one place. This comprehensive solution allows the company to control the quality of the product, and also makes it flexible in adapting products to the special needs of the customer. In production program we have intrinsically safe sensors type Exia for use in hazardous areas, type Exd sensors with flameproof enclosure and type Exe sensors with reinforced housing, complying with a new approach to the directives ATEX. Over the proper process of production keep watch the Accredited Laboratory for Temperature Measurements equipped with control and calibration devices. Additionally, the company has in offer a wide range of measuring equipment for controlling, recording and process control based on measurements of temperature, pressure and other electrical values.

HELUKABEL Polska  
Sp. z o.o.

foreign company

HELUKABEL Polska Sp. z o.o. is a subdivision of a German company under the same name. It specializes in the production of cables, wires and wiring accessories for all trades and all applications. The company headquarters along with a state of the art magazine and office building is located in Krze Duże in Mazowsze voievodeship, close a large transportation artery. A good location combined with a high-tech vertical storing system and loading ramps makes HELUKABEL Polska able to deliver its products anywhere in the country within 24 hours. The offer consists of a wide variety of cables for automation and control, data transfer, telecom applications, flat cables, heat resistant cables, non-flammable cables, optic cables, power cables, rubber cables, spiral cables. All products are resistant to chemical, atmospherical and temperature factors as well as radiation. HELUKABEL offers also many accessories and consulting related to electrical installations. HELUKABEL Polska is the largest and the most advanced production location outside of Germany.

Holduct Sp. z o.o.

Polish company

Holduct Ltd. is a provider of busbar systems and systems for the transmission of electricity. It offers a complete electric power transmission systems based on single-phase busbars, three-phase and low-voltage of their own design. The system includes connections for generators, transformers, switchgear cabinets with equipment that is: current transformers, voltage transformers, resistors and grounding transformers, surge arresters, equipped with the dry air pressure and other (eg. The hydrogen detection system). HOLDUCT is modernizing busbars installed in Poland and provides services modernization and renovation to existing busbas installations. The scope of work includes: removal of insulators and their replacement, cleaning of the surface current paths and walls of the enclosure, inspection of the (current and voltage transformers, surge arrestors, etc.). Possible replacement, the substitution of bolted joints (housing, compensators) connections welded or glued (manholes insulators), re-assembly and painting of the exterior surface of the housing, cleaning and painting the supporting structure, installation of dry air pressure (on request), attempts to post-assembly and repair, renovation, alteration, expertise and calculations. Busbar tests are carried out a designated high-voltage laboratory.

Medcom Sp. z o.o.

Polish company

The MEDCOM company based in Warsaw, is engaged in the design, manufacture, installation and servicing of modern power electronic devices, designed for energy and industry, electric traction and the military. The offer includes: equipment for uninterruptible power supply loads of AC and DC control and measuring systems guaranteed power supply devices to compensate for current distortion caused by non-linear loads, monitoring systems, uninterruptible power supplies, power engineering devices for railway and tram, special equipment for army. MEDCOM has installed more than 16,000 appliances. Manufactured devices - regardless of research and testing in the company and the Warsaw University of Technology - are tested both in the country (ENERGOPOMIAR Gliwice) and abroad (Hungarian Institute for Testing and Certification of Electrical Equipment). A large share of company production is exported to Western countries. In the energy field, the company manufactures switching mode power supplies, DC converters, inverters, emergency power supply, uninterrupted power supply systems, inverters for drives with backup, rapid non-contact switches, active filters, and control devices - measuring, auxiliary equipment, batteries, monitoring of power systems.

Meskon Sp. z o.o.

Polish company

P. P. i A. MESKON Sp. z o.o. is an industrial automation company. Core business of the company includes engineering, installation and commissioning of systems for automated control and measurements. The company specialises in measurements of non-electrical parameters using electrical methods, in particular measurements and signaling of: levels, flows, masses, temperatures, pressures, physicochemical properties etc. The company also performs pre-fabrication of control cabinets, as well as instrumentation and control panels. The company actively participates in the works on automation of production processes in many branches of the Polish industry. Product offering which enables works in those areas inclues: level measurement and signalling devices (using ultrasound, capacitance, hydrostatic, vibration, radar, conductivity or float and tilt methods, ultrasound measurement probes, communication modules, microprocessor integrators), pressure measurement and signalling devices (hydrostatic transducers, pressure gauges, pressure difference transducers), flow measurement devices (in open channels, flow meters for loose material, electromagnetic flow meters), temperature measurement devices (temperature sensors, pyrometers, micropyrometers, controllers, other instruments), weighing systems (belt weighing machines, weighing of tank content, weightbridges), signalling devices (singalling of loose material flow, emergencies, leaks, cavitation, signalling devices with simple regulating functions), couting machines (programmable indicators, local and matrix-based, universal transmitters, counters, calculators), visualisation of technical processes.

Pile Elbud S.A.

Polish company

Pile Elbud S.A. is constructing, upgrading and overhauling overhead and cable power lines of medium and high voltage, grid switching stations and fibre optic lines. The company also constructs transmission lines, distribution switching stations and substations as EPC contractor. The company is specialised in carrying out complex investment projects for entire electrical power engineering business, starting from engineering to procurement and deliveries, construction and installation, commissioning and hand-over to the investor. The company works for the power industry: PSE, distribution system operators, energy-related telecommuniation operators. The company also has customer sfrom other sectors. Current offering of Pile Elbud: construction of transmission and distribution lines and grid substations as turnkey delivery; construction, uprades and overhauls of overhead lines, extra-HV, HV and MV swtiching stations in conventional and compact layout in SF6 insulation for power industry and other industries, cable lines of high and medium voltage, fibre optic lines; installation of fibre optic cables in lighting conductors; isntallation of fibre optic cables - suspended and self-supporting; delivery, installation and commissioning of generator breakers and high-current lines; installation of all kinds of steel structures; repairing faults occurring at power lines and switching stations; construction of radio and TV masts and masts for cellular telephony networks; installation and commissioning of classic remote control systems and computerised remote control systems; comprehensive inspection and measurement works.

Power Engineering S.A.

Polish company

Power Engineering Sp. z o.o. is a manufacturer of power transformers, distribution transformers and transformer radiators, as well as transformer euqipment such as valves, tanks expansion chambers. Moreover, the company supplies burners and parts for boilers and turbines used in power plants, commercial or industrial. Ofer of Power Engineering Sp. z o.o. includes radiators made of pressure welded plates, stamped from metal sheets, welded to two collectors; collectors have handling lugs, as well as vent and drain. Collectors are ended with flanges used to attach the radiator to a transformer tank. Radiator plates are stiffened with steel bars. Number and arrangement of bars depends on radiator dimensions, and type of corrsion protection method used. At the ends of radiators threaded sleeves are welded; these are used to attach radiator grounding systems upon installation on the transformer bay. The company also supplies custom-made transformers, oil and dry, adapting their paramters to customer needs.

OLMEX S.A.

Polish company

Design works, measurements, research, implementation and electrical installation with a special focus on the projects related to rationalization and reduction of energy consumption. Over the years, the Company, in cooperation with numerous research units, has been implementing innovative technical solutions. Our Research and Implementation Enterprise has realized investment projects in cooperation with numerous business partners from abroad (for instance, Hitachi, Hyosung, Alstom, Trench, Končar etc.), which specialize in the realization of large electrical power projects. Our human and technical resources are managed by a highly qualified staff of engineers who guarantee the excellent quality of services offered by us our principal field of activity is the construction of electrical power engineering facilities both for commercial and industrial power generation. Construction and modernization of medium and high voltage stations; construction of high voltage power stations based on the gas-insulated switchgear SF6 (GIS); measurements and analysis of power network parameters; construction and modernization of power networks and lines; selection, design, supply and assembly of installations for low voltage reactive power compensation; selection, design, supply and assembly of installations for medium and high voltage reactive power compensation and SVC systems; delivery of high voltage equipment; delivery, installation and servicing of devices for power cable diagnostics as well as services connected with diagnostic measurements of cables. The largest customers of our Company's services and products include power network operators, power plants, wind power stations, electrical power and heating plants, electricity distributors, mines, refineries, heavy industry companies.

ENBUD Sp. z o.o.

Polish company

Przedsiębiorstwo Usług Technicznych Elektryk Sp. z o.o. is a manufacturer of metal cases. The production includes prefabrication of switchboards for low voltage installations used in various industries like energy, telecom and IT. The full offer contains: cases for automation systems, capacitor batteries, industrial switchboards, modular case systems, inbuilt and external switchboards, measuring systems, cable connections for power and automation and control use. The manufacturer produces a wide variety of small switchboards for household use. Elektryk can manufacture certain products according to customers designs or own designs. Additionally Przedsiębiorstwo usług technicznycch offers services related to installations of automation and control systems, laying down electrical installation, performing technical testing (testing ground wire resistance, continuity of circuits, fireproofing, electrical interference) and checkups for all installations and automation and control systems in industrial and public utility buildings. The company has a design bureau, an industrial park with a complete line of metal case production and the tools needed for prefabrication of cases and electrical installations. The production facility has CNC mechanical and laser cutters and a electrostatic painting station.

Carboautomatyka S.A.

Polish company

PKiMSA Carboautomatyka S.A. is addressing its offer to the industries such as: mining, power industry, heating industry, metalurgy, coking plants, water and sewage management, communication tunneling. Carboautomatyka is active in all Polish mines, performing works related to autoation, control and monitroing, both over- and underground. Range of company's products and services provides customers with complex deliveries of contracted tasks, from the design to production, procurement, installation, training and maintenance. The company also supplies its products and services abroad, including Russia, Vietnam, Argentina, Bosnia and Herzegovina, and in the future also China, Romania and Nigeria. Development and transformation of Carboautomatyka has enabled the company to find sales markets for its products and services at power plants and heating plants, where it specialises in smooth motor speed control. Company's customers include district heating companies and power plant operators. Additional area of activity involving water and sewage management, is construction of automation and electrical systems in facilities related to sewage treatment, as well as pumping stations.

Elektromontaż nr 2 w Katowicach

Polish company

Elektromontaż nr 2 is an electrical engineering company. It offers full scope of works and services in electrical engineering. It is providing services for industrila investment projects, residential developments, municipal projects and environment protection facilities. The company offers comprehensive engineering, production and prefabrication of electrical products and equipment. It manufactures electrical distribution equipment, transformers, electric apparatuses and - as the only entity in Poland - busbars with F2 firewall. Its partners and customers include: Fiat Auto Poland, STROK, Tenneco Automotive, Schneider, Siemens, Legrand. Currently the company offers installation of all electrical systems, installation of outdoor and indoor transformer stations, installation of switchgears, control cabinets, switchhouses, as well as control/measurement services, identification and repairs of cable damage, mechanical laying of high voltage cables up to 110 kV, along with installation of cable heads and boxes, cutting, bending and boring acid-resistant metla sheets, welding copper and aluminium. Additionally the company produces: distribution bus bars, horizontal and vertical, medium voltage switchgears, low voltage switchgears and control stations, signalling, control and automation equipment, transformers, low voltage disconnecter switches and separators, structural components - galvanised and stainless cable ladders, supports and clamps to install trays and ladders.

Megasystem Sp. z o.o.

Polish company

Przedsiębiorstwo Usług Inżynieryjnych MEGASYSTEM Sp. z o.o. operates on the market of alarm systems and security measures. It employs licensed workers with many years of experience in the business. The company offers production of safety systems complete with the identifications and analysis of present dangers, designing, supply and installation of devices, comprehensive testing and startup of installed systems providing the client with a working solution. MEGASYSTEM offers also its services in the field of maintenance, modernization and servicing of all system installed by MEGASYSTEM Sp. z o.o. as well as training programs for system operators and lectures on improving safety. MEGASYSTEM Sp. z o.o. cooperates with the top experts on safety systems to provide better services through highly qualified staff. All aspects of the companies offer are also individual products allowing clients to choose designing, supplying products, installation, startup, training and servicing separately or as a whole package. MEGASYSTEM provides fire detection systems, burglary detection systems, access control systems, monitoring systems, gas detection systems, sound alarms, and building automation systems.

Kared Sp. z o.o.

Polish company

Kared Ltd. is a company with over twenty years of tradition. It specializes in measurement and control solutions for automation systems, diagnostics and research. It performs work from conceptual design to implementation. The devices meet the requirements of the highest accuracy and reliability and have a very high tasks execution speed - "real time". The accuracy and reliability combining synchronizers and systems used for automatic switching on the reserve used in the power industry is one hallmark of the company. The offer is addressed to companies operating in the energy production, transmission and distribution networks and the industry. They offer a wide range of products such as the synchronization systems, alarm systems, control and supervision systems, automatic switching of the power supply. The company introduced a draft of the new synchronizer designed for use in all places of power installations requiring control of synchronism during the switching processes. The SS-07 type synchronizer is dedicated especially for high voltage power stations, where it continuously monitors the distribution plant in which it is installed, analyzing the feasibility of connections.

Schneider Electric Polska Sp. z o.o.

foreign company

Schneider Electric manufactures and supplies equipment for power engineering and infrastructure, industrial processes, building automation systems and data centres, as well as residential buidlings. In Poland Schneider Electric currently owns six subsidiaries: ELDA-ELTRA Elektrotechnika Spółka Akcyjna - specialised at manufacturing and delivering complete sets of accessories for electric systems in buildings (residential and commercial) rated at up to 250 V, connectors and outlets, fixed and roll extension cords, portable sockets, adaptors, plugs, connection cords, connectors installed in conduits and micro conduits. Schneider Electric Industries Polska Sp. z o.o. offers two product ranges: Compact NS/NSX breakers from 80 A to 1600 A and Compact INS/INV switch disconnectors from 40 A to 2500 A, along with relevant accessories. Zakład Transformatorów (Transformer Plant) manufactures and delivers medium voltage transformers for the power generation sector (MINERA oil transformers, TRICAST resin transfoermers, RESIGLAS resin transformers, TZA resin transformers). Zakład Automatyki i Systemów Elektroenergetycznych REFA offers comprehensive system-level solutions. It delivers and commissions functional DCS solutions for MV/HV applications based on PACis and SUI technologies, as well as integrated or distributed busbar protection systems based on protection terminals.

TechniCon Sp. z o.o.

Polish company

TechniCon Spółka z ograniczoną odpowiedzialnością is a company which designs, manufactures and installs control systems for power plants, combined heat and power plants and industrial plants. Its flagship products are control systems for power plants sold under the brands SYDEL and SYLOC. The systems have an open infrastructure both in terms of software and hardware. TechniCon's offer includes: IT systems, technology and infrastructure, measurement systems, automation and control systems, data transfer installations, turnkey and single component development, supplying measurement devices, computers, system startups, monitoring and maintenance, post-warranty servicing, integration of new and existing systems. The main area of activity of the company is maintenance of electrical installations, automation and control systems, electricity metering, metering of other mediums (like water, gas, steam, compressed air, heat and others), stock taking of IT equipment in energy industry, monitoring and control of technological processes, IT services suited to the clients' needs, dedicated ERP class systems.

TELE - FONIKA S.A.

Polish company

GH SA operates in the crane industry for over 50 years. GH SA Manufactures cranes, hoists, and other lifting equipment. It has representative offices in 40 countries around the world, including Poland. Thanks to their factory GH Intertech in Kłobuck located near Czystochowa, in 2010, it expanded its markets to Russia, Ukraine, Czech Republic, Slovakia, Slovenia and Hungary and continues to develop in new countries of Eastern Europe. The products are designed for a variety of industries, including power plants, steel mills, shipyards, sewage treatment plants, wind power plants, aviation, automotive and processing of waste. In Poland GH Intertech Sp. manufactures gantries in halls with a total area of 8. 000m2. For the production of cranes using a specialized production line of self-propelled welding machines. Preliminary crane assembly takes place on a special leveled space. Each of the produced gantries is examined by X-ray. The company offer cranes (overhead cranes: single girder mobile cranes, double-girder, suspended, gantry and half gate and specialized cranes), hoists and winches, cranes, accessories and spare parts.

WiNUE

Polish company

WiNUE is a company dedicated to the production of unique electronic devices. WiNUE performs installation and servicing of americium smoke detectors and other automation and control systems based on radioactive isotopes. The company offers: isotopic measurement and detection techniques – enclosed sources of radiation (supply of devices and radiation sources, road transportation of radiation sources and devices containing such sources as defined by the ADR class 7 category, startup and handing over of complete systems in compliance with the atomic law – Prawo Atomowe, examination of the tightness of the containments, radiological work environment testing, calibration of industrial devices employing ionizing radiation, modifications of existing and construction of new electronic devices constituting parts of an isotopic measurement system) and fire warning installations (startup and servicing of other manufacturers systems like Polon Alfa and Telfa and from foreign manufacturers like Siemens/Cerberus, Honeywell, Notfire). The company offers comprehensive execution of design and installation of such systems along with providing involved products for small and medium buildings and testing the tightness of confinement of isotopes and withdrawing unneeded and faulty detectors.

Uniserv Piecbud  
Sp. z o.o.

Polish company

Uniserv-Piecbud S.A. is a company which provides comprehensive services involving cooling water systems, industrial exhaust stacks, silos and industrial furnaces. The company provides its services to customers in commercial and industrial power plants, metallurgical industry, coking plants, cement industry and other industries. It may operate as EPC contractor, consortium partner or subcontractor. Uniserv-Piecbud S.A. was founded in 2008. It was based on personnel and technical facilities of Piecbud-Bytom S.A. (2003), itself separated from Piecbud S.A. which had operated in Poland since 1948. The company offers technical advisory services, engineering services for whole projects (from building permit until operating permit), expert studies, evaluations of technical condition, construction of new facilities, and upgrades, modernisations and reconstructions of existing structures and installations. In the past the company has delivered projects for customers such as: Siekierki CHP Plant in Warsaw, Poland; Koźnice Power Plant, Świerże Górne, Poland.

VOLTRIM  
KABLE Sp. z o.o.

Polish company

Voltrim Kable Sp. z o.o. was established in 2004 at the site of a special economic zone in Żarnowiec, some 50 km from Gdańsk and Gdynia prots. Voltrim Kable manufactures approximately 4000 types of cables of various types, with copper or aluminium conductors, and with insulation and covering made of PVC, PE, XLPE or non-halogen materials. The plant is specialised at producing contorl cables, flexible cables and power cables. Voltrim's products are mainly sold on European markets. Offer of Voltrim Kable includes following cable products: power cables, signalling cables, flexible control cables, installation multicore cables, installation single-core cables, cables for mobile and portable consumers, bare copper conductors. Voltrim Kable systematically trains its personel, which ensures that its crew is highly specialised. Supervision of manufacturing process and implementation of new technologies is carried out by experienced technical staff with a long experience in this business. Voltrim Kable has its own laboratory with instrumentation enabling tests of produced cables and conductors.

Wika Polska Sp. z o.o.

Polish company

WIKA Group is a supplier and service provider in the field of pressure and temperature measurement. WIKA takes part in standard setting for measurement of flows and level as well as for calibration technologies. The company was founded in 1946. Today it has production facilities all over the world ensuring high flexibility and reliability of supplies. Every year WIKA produces as many as 10000 products in a single production run amounting to 50 million standardized products and unique solutions per year. The products are compatible with each other allowing for the creation of unified and expandable systems. On the offer there are many electrical, mechanical and mechatronic pressure and temperature gauges, membrane separators, level meters and calibration technologies. WIKA products are used for measurements in power stations (big and small, nuclear, coal), peak load stations (turbine plants, wind farms, pumped storage hydroelecctricity etc.) and DCS (distributed control system) for power plants.

Zakład Maszyn Elektrycznych EMIT S.A.

Polish company

ZEM EMIT S.A. is a Polish manufacturer of low- and high-voltage electric machinery of medium and high power. The company has more than 80 years of experience in designing, manufacturing, maintaining and operating electric machines. It is one of the main suppliers of drives for the fuel/energy, chemical, paper, shipbuilding, mining and electromachinery industries. More than half of company's products are exported to foreign markets where they successfully compete against foreign products. EMIT S.A. is a part of Cantoni Group formed by Polish producers of electric motors and equipment, as well as an export sales office - Cantoni Motor. Offer of ZEM EMIT S.A. includes manufacturing low voltage slip ring or squirrel cage motors, high voltage motors, motors for mining and traction motors. EMIT is specialised in supplying non-standard products, adapted for specific needs of a customer. The company owns machinery which enables it to offer high quality machining, blasting, grinding and cabin flushing services.

ZPUE S.A.

Polish company

ZPUE S.A. is a part of the Koronea Group. It has been well-known in the Polish energy sector for twenty-eight years. The company is engaged in the manufacturing of modern devices for power engineering. It is considered a complex and complementary supplier in Europe. ZPUE is not only synonymous with reliable solutions, but also one of the best employers on the market in Świętokrzyskie and an owner of several companies in the country (Katowice, Gliwice, Raciąż, Kalisz, Koszalin). Almost 3000 people are employed in the company's divisions, plants and sales offices in Poland and abroad. They guarantee the continuity of the manufacturing and sale processes. The offer includes: cable and overhead power lines, such as containerized transformer stations, medium voltage switchgears, low voltage switchgears, pole transformer stations and accessories for overhead lines. The equipment is used in secondary power distribution of energy distribution and industrial companies in Poland, Europe and rest of the world. The company performs comprehensive construction of electrical power engineering systems in new, modernized and overhauled facilities. It builds turnkey medium and low voltage substations. It offers EPC deliveries of electricity-related comopnents of public buildings. It ensures optimal and professional maintenance of power supply systems. One of the company's departments located in Włoszczowa manufactures spun prestressed concrete poles used as supporting structures for low- and medium voltage overhead lines.

ZWAE Sp. z o.o.

Polish company

ZWAE Sp. z o.o. is a manufacturer of switchgear equipment for medium and high voltage distribution networks. The company was founded in 2000. The plant is located in Lębork. It exports products to the countries such as Norway, Sweden and holds a significant position in Russia, Belarus and Ukraine. The company offers: uncouplers, disconnectors, MV indoor drives, outdoor HV drives and disconnectors, maintenance and engineering services. The design section is using computer aided design tools. Used software, assembly tools, and initial and final control stations are continuously improved. ZWAE Sp. z o.o. manufactures followign equipment: high voltage switchgear and control gear, medium voltage switchgear and control gear - indoor, medium voltage switchgear and control gear - outdoor and other accessories such as: NW-1/WNS-1 voltage indicator, secondary windings switch LP-1, fuse base PB for 12 and 24 V voltage.

ZREW Transformatory S.A.

Polish company

ZREW Transformatory S.A., which previously operated for many years as ZREW Transformatory Janów, is a company based in Łódź present in transformer market for more than 50 years. The company’s activity involves manufacturing, overhauling, upgrading and providing full diagnostics for oil power transformers. ZREW manufacutres power transformers for distribution networks, step-up transformers for power plants and CHP palnts with a rating of up to 120 MVA and voltage up to 145 kV, and special transformers: for furnaces and for powering rectifier systems. In the production of transformers, the company uses materials and components procured only form the best global suppliers. Normal transformers are intended for continuous operation at temperate climate and are designed for outdoor installation or for installation at appropriately ventilated rooms, in an atmosphere free of dust, chemically active gases or explosive gases, at an altitude no higher than 1000 m above sea level, at ambient tmepratures from -20 to +40°C (248 to 313 K). The copany also manufactures transformers with accessories designed to operate at the temperatures starting at -40°C (233 K).

ERKO company was founded in 1981 by Roman Pętlak. It has always been a family company, therefore the founder’s family actively participates in the company management. ERKO is one of the leading Polish producers of various types of cable terminals and connectors, as well as tools for electrical works.

OUR MAIN PRODUCTS GROUPS:

CABLE TERMINALS AND CONNECTORS - ERKO manufactures over 2000 types of cable terminals and connectors for cables 0,1 to 400mm2.

TOOLS - ERKO has in offer crimping, cutting, hole punching tools (mechanical, hydraulic, pneumatic) and other electricians tools and accessories.

BUSBAR PROCESSING - ERKO offers machines with functions of cutting, hole punching, bending, offsetting and inserting nuts in aluminum and copper busbars. Maximum dimensions of processed busbars are 15 x 200mm.

SHARK TECHNOLOGY - SHARK technology dedicated to connect Winding enamelled wires in motors and oil transformers, copper with aluminum wires, round and rectangular wires

# Mining

Polish company

The company KGHM Polish Copper SA It was founded in 1961. The company is engaged in the extraction and processing of mineral raw materials such as copper, precious metals (gold, silver, palladium and platinum), molybdenum, rhenium and other products. The main products of copper are performed; copper cathodes, copper rod, oxygen-free copper wire, wire oxygen-free copper containing silver, copper ingots and copper granules. The main business sectors are: metallurgy and mining and metallurgical operations and refining. The company KGHM Polish Copper SA currently operates three underground mines in Poland: Lubin, Polkowice-Sieroszowice and Rudna. In these places there are also ore enrichment installations. The ironworks facility implements the following processes: smelting and refining are located in the following locations: Głogów and Legnica. The Cedynia copper wire rod plant in Orsk produces also the Cu-OFE wire. The company also has six mines abroad: Robinson, Carlota (USA) ; Mccreedy West, Morrison (Canada); Franke, Sierra Gorda (Chile). The company also operates innovation. KGHM Polish Copper SA in 2010 it acquired the status of a Distribution System Operator of the electricity and gas decision of the Energy Regulatory Office.

Addit Sp. z o.o.

foreign company

Addit is a contract manufacturer, processes and system supplier of sheet metal parts and products, modules, systems, apparatus and machines. The competence of the company is the manufacture of sheet metal, assembly and services ranging from project development to logistics services. Addit in its activities uses project management tools, which is a module Project System (PS). Applied project management tools give us the ability to estimate and plan costs, create detailed production plans and risk. In its activities the company supplies products to many industries: agriculture, military and aerospace, energy, entertainment, industrial production, measurement and test, medical equipment, printing and paper, rail vehicles, semiconductors, telecommunications, vending machines. In terms of design activities, the company uses software CAD / CAM Radan, Solid Designer, ProEngineer and Autocad, designing systems from steel, stainless steel or aluminum. Rich stock of machine allows to carry out such services and operations as welding of laser machining steel, stainless sheet metal, machining presses, machining, assembly and integration, powder coating and wet painting.

Alchemia S.A.

Polish company

Alchemia Capital Group consists of: WSE-listed Alchemia S.A. (Huta Batory, Rurexpol, WRA) with subsidiary entities: Huta Bankowa, Kuźnia Batory, Laboratorium Badań Batory. The Batory Pipe Rolling Plant Division manufactures seamless pipes as well as smooth pipes for pipelines, ship pipes, boiler tubes and structural tubes intended for machining. Those products are primarily used in the power, oil & gas and mining industries, as well as in construction of pipelines for liquids and gases. The range for the pipes produced in this division is from 219 to 508 mm. The Batory Steel Plant Division manufactures steel ingots. Rurexpol Division of Częstochowa manufactures specialised pipes with diameters from 121 mm to 273 mm. Rurexpol produces boiler and alloy tubes for power industry. Range of products offered by Rurexpol also includes structural tubes for further mechanical processing, e. g. construction of hydraulic servos and components of hall structures. Andrzej Pipe Rolling Plant is specialised in manufacturing conduits, boiler tubes and structural tubes of smaller diameters, from 21 mm to 114 mm. These are used in construction, power industry, chemical industry, oil & gas industry, construction of machinery, shipbuilding, gas supply etc. Kuźnia Batory, which is also a part of Alchemia Capital Group, is a producer of free forged bars and forgings of 10 tons in weight. The parts produced in Kuźnia Batory are used by the power and machine industries.

BINŻ S.A.

Polish company

BINŻ S.A. offers produciton, delivery and installation of steel structures, complete with anti-corrosion protection, fire protection etc. The company's equipment includes: automatic bi-directional bending machine for shackles made of coil hot-rolled or cold-pulled rods. Rods cut to dimension, with a cuttig speed ca. 100 m/min and bending speed around 1120 grad/sec with automatic electro-mechanical rod cutting device. Production of rods cut to dimension with a diameter of up to 40 mm for single, up to 32 mm for double, up to 28 mm for triple, up to 20 mm for quadruple and up to 16 mm for five rods, with a pulling speed up to some 135 m/min. Semi-automatic manual bending machines with reducers preventing stretching during bending process and electronic digital programming device enabling programming shackles and other shapes with up to 30 bends, controlling bending angles and storage for 50 different shapes. Manufacturign rods with a diameter of up to 40 mm for single rod, 35 mm for double, 28 mm for triple, 25 mm for quadruple and 20 mm for five rods, with gantry cranes controlled with control panels with a capacity of 40 tonnes and auxiliaries, including hook weighing devices.

Ferrum S.A.

Polish company

The strategic goal fo the company is manufacturing range of steel welded and pressure welded pipes of the highest quality. The pipes are manufactured for municipal water supply and sewerage systems (for transporting sewage, drinking water and salty water) and industrial applications. Another important customer sector is petrochemical industry, which uses pipes pressure welded with high frequency currents, along with polyethylene caotings. The company also supplies structural tubes, related to industrial infrastructure, construction industry and construction of roads and motorways. The company has a very modern process line for coating pipes with a three layer polyetheylene (PE) or polypropylene (PP) coatings - with diameters above 168. 3 mm and - as the only supplier in the country - above 508 mm. The product quality is considered very high, as demonstrated by numerous quality certificate, which ensures competitiveness on European Union's and global markets. The highest share in export sales involves EU countreis. The company sells its products to Germany, Austria, the Netherlands, Denmark, Sweden, Norway, Estonia, Lithuania, Czech Republic, Slovakia, Serbia, Spain, Croatia and Hungary. Sister company (ZKS Ferrum S.A.) manufactures inner casings for various nuclear projects

ZKS Ferrum S.A.

(associated with Ferrum S.A.)

Polish company

We are one of the biggest manufacturers of LPG containers, verti-cal containers and tanks in Poland. Using our production capacity we successfully operate o~n the market of constructions for en-ergy industry. Our experience provides full and complex manufac-ture of cement works furnaces and big metallurgical furnaces. We also specialise in steel blankets, drums, boilers, vats, zinc plating and etching tanks. In accordance with customer's preferences we may consider production of other similar steel structures ie. scrubbers. We have a magnificent machine park, which consists of machines and equipment of the possibilities which it is difficult to look across Poland. We continue to invest in our production base (heat treat-ment furnace, CNC vertical turning machine, automatic shot blast-ing machine, bending machines for plates thickness up to 250mm) in order to meet all the most diverse and sophisticated needs of our customers.Because CUSTOMER is our top priority, that all our ac-tivities are focused precisely on him. Our products are offered in the whole Poland's territory with an opportunity to provide turn-key solutions. Upon customer request we also render transporta-tion services. Since the Company's very beginning, our products are offered o~n overseas markets that is Germany, Austria, Switzerland, USA, France, Sweden, the Czech Republic, Mexico, China, Hungary, Saudi Arabia, Iraq, Turkey.

Gerda - Hydomat S.A.

Polish company

Gerda Hydomat S.A. is a manufacturer of stamped elements and tools for plastic working for various businesses, mainly automotive industry, hosueholds and construction industry. It manufactures parts from strips using cold plastic working: stamping, riveting, pressure welding and minor assembly. Gerda Hydomat is operating in the Pol-ish market and abroad, successfully exporting its products to Canada, Russia, Japan and USA. It designs and manufactures various tools with a weight of up to 10 metric tonnes: advancing, trasnfer, manual, prototype, individual and for exact cutting. Main processed materials are: cold rolled steel, hot rolled steel, galvanised steel, high-tensile steel, stainless steels, aluminium, non-ferrous metals. The company has good productoin capabilities with a large fleet of machinery (the highest available nominal press pressure is 5000 kN). Equipment of measurement laboratory includes: Brown & SHarp Smartcope MVP 300, 2D MITUTOYO LH 600 height meter, Rockwell, Vickers, Brinell Basic hardness meters. The scope of laboratory's activity includes: supervision of control instrumentation and its calibration, verification of deliveries, control of production process, control of ready products, control of shipments, measurements of tools' working parts.

GZUT S.A.

Polish company

Odlewnia Sp. z o.o. is a company which owns induction furnaces for cast iron, and induction and gas furnaces for bronzes, with machine and manual forming in bentonite. The production process and ready products are subject to continuous control. The chemical composi-tion of alloys is tested with spectrometry. Samples are collected for strength testing and attestations are issued. The offer includes: castings of grey iron, nodular cast iron, bornze, artistic castings and machining. The division of lifting equipment and steel structures offers a wide rnage of products, including various overhead cranes, other cranes with lifting capacity of up to 5 metric tonnes, gripping devices and crossbars, steel structures with a mass of up to 20 metric tonnes. The pump division manufactures and sells pumps, mainly built upon own designs. The plant is located at Robotnicza Street within the Stara Huta Industrial Park and performs produc-tion activities in a compact complex of production halls with a total area of 5400 m2. The plant independently carries out process design, engineering, production, sales and maintenance. Because of the close collaboration with the foundry located at the same site, the plant offers comprehensive deliveries of high quality castings along with machining.

HSW S.A.

Polish company

Huta Stalowa Wola S.A. provides forgings for industrial applications. Products include turibne shafts, elements of flanges and rotors, rods, rollers, rings, sleeves, blocks, plates and crankshafts. The plant owns hydraulic presses with pressure of 25 MN and 10 MN, as well as 2000, 1500, 1000 and 750 kg hammers. The products of the plant fit within the weight rang from 10 kg to 14 Mg. Huta Stalowa Wola has worked for the customers from power industry, transport sector, defence industry, shipbuilding, machine industry, mining, drilling etc. The company offers water jet cutting, metal sheet bending and roll levelling, specialist welding, milling and wheeling, honing, grinding and shot-blasting. The company has an in-house laboratory ensuring quality control of supplied products. Five methods are used to determine structural strength, impact resistance, hardness and hardening capacity of products: strength test, Charpy impact test, two types of hardness tests: Rockwell in HRC and HRB scales, and Brinell (maximum load of 3000 kg). Hardening capacity is determined using Jominy method.

Investa Sp. Z o.o.

foreign company

Investa is a distributor of stainless steels and aluminium. The company was founded in 1987. Its service centre offr s metal sheet cutting using laser and water jet equipment, and precise bending on press brakes. The company offers procurement of metal sheets and their processing at single point. Investa is a founding member of the Stainless Steel Association. The company offers: precision cutting of metal sheets with laser and water jet equipment (the latter allowing cutting of sheets up to 260 mm thick), precision metal component bending, trimming shapes of aluminium plates, sanding stainless steel sheets, coating metal sheets with film, grinding and polishing stailness pipes, cutting pipes and rods. The company also has an extensive network of warehouses which offer following metallurgy products: metal sheets, rods, profiles, pipes, valves and fittings.

Izostal S.A.

Polish company

Izostal S.A. is a manufacturer of inner and outer anti-corrosion coatings on steel pipes. Izostal is a manufacturing company whose main products are technologically advanced outer and inner anticorrosives for steel pipes used mainly for construction of oil and gas pipelines. The offer also includes steel pipes, metallurgic products and steel valves and fixtures. Izostal S.A. is cooperating with companies which build investment projects for gas inudstry. The main product of Izostal is an inner three-layer anti-corrosive coating used on steel pipes for gas, oil or water trasfer. Within the activity of its research and development centre, the company offers comprehensive set of tests, especially inspections of welded connections. Metallurgic products other than pipes are offered in two main grades, as per European standards: S235 (and variants) and S355 (and variants), as well as equivalents of those grades. The offer covers practically full reange of dimensions for long components (H-bars, angle bars, cold-bent profiles) and flat products (cold- and hot-rolled steel sheets in various formats, with thickness from 1 to 50 mm).

KZO S.A.

Polish company

The KZO company specializes in the manufacturing and sale of sewage elements from cast iron. The cast sewer products manufactured by KZO SA are created using several differing technologies: flaskless casting molds made under high pressure on the DISA 2110 machine molding with molding sand based synthetic quartz sand, a mixture of bentonite - kormixowej and water, casting in molds made by hand from molding sand based synthetic quartz sand, a mixture of bentonite - kormix and water, or the mass of natural-based silica sand silt and water, die casting, gravity casting of half chilled molds where the bottom mold is made of molding sand and the upper mold part is made of metal, centrifugal casting pipes, where a spinning metal the mold is used. The product line of the company includes: tubes and profiles (socket and plain-end), sewer manholes, inlets, telescope pipe outlets, final street boxes and other elements of cast iron. KZO has its own design office equipped with computer-aided design tools foundry.

Krakodlew S.A.

Polish company

The Krakodlew SA company is one of the Polish foundries of gray cast iron and ductile cast iron. Since the beginning of its operation, the company specializes in the production of casting equipment such as ingot molds, collars, casting plates, siphons, slag ladles, ingot molds for ferroalloys, ballasts for cranes. Additionally, in the second half of the nineties, the foundry expanded its production profile with weights for cranes passers. The foundry is equipped with two medium frequency induction furnaces with capacities of 5 and 25 tons and settler for liquid pig iron, blast furnace with a capacity of 150 tons. Castings are made of gray cast iron, ductile iron and vermicular. The mass of casting is in the range of 1 to 80 tons. Currently Krakodlew SA supplies metallurgical equipment for around 50 steel mills. The products of the foundry are offered to most European countries and also outside Europe. Among them, are the following countries: Poland, the Czech Republic, Slovenia, Germany, Austria, the United Kingdom, Switzerland, France, Sweden, Norway, Iceland, Italy, Belgium, United States. At the moment, export accounts for about 95% of total sales.

Moris Sp. z o.o.

Polish company

MORIS Sp. z o.o. is a supplier of wide range of metallurgy products for multiple market segments, including: railway engineering, machine industry, steel structure manufacturers, mining industry, construction industry and trading companies. In order to diversify its business, MORIS has completed an investment project of building a Railway Rail Pressure Welding Plant in Chorzów. The company owns a Q2 certificate issued by DB. Full automation of the rail welding, straightening and grinding process guarantees repeatable quality of finished products. MORIS is a licenced railway carrier. Along with rail sailes the company also offers product transport. Specialised rolling stock owned by the company and personnel experienced in operating it nesure safe and quick unloading. MORIS's commercial offer includes a wide range of steel products, including round and flat rods, rectangular bars, metal sheets, angles, T-bars, channel bars, mining profiles, railway profiles, railway rails, overhead crane rails, intermediate rails, tram rails and railway accessories. The company proivdes domestic and international road trnasportation under relevant licence. MORIS owns specialised equipment for transporting steel, steel products and rails with a length of up to 35 m.

Hydro - Tech Konin

Polish company

Hydro-Tech Konin offers supplies and services in three areas involving innovative technologies: renewable energy sources - heat pumps, industrial valves, convex safety explosion plates cut and uncut and concave - also uncut or cut, as well as new concave URA plates for applications with low and high blow pressures for liquid substances. URA plates enable standardisation through using single type of safety vents for all applications, previously unachievable with similar products. Additionally the company manufactures a full line of safety panels for applications in EX classified zones. Company also distributes cold- and hot-rolled metal sheets, pipes, profiles, rods and flat bars, aluminium sheets, Gefa industrial valves, throttles and sliding valves. The valves may be ewquipped with a setting ring, reducing dead area around the ball. FGT valves, thanks to full PTFE filling may work with very aggressive media and may also be equipped with ceramic balls. Hydro-tech Konin is an exclusive representative and distributor of products of companies Alpha-InnoTec, GEFA and ZOOK in Poland. It has its head office in Konin and two network offices: in Gdynia and Poznań.

Ramb Sp. z o.o.

Polish company

The company is owned by the PGE Górnictwo i Energetyka Konwencyjonalna. It has been established due to limitations in anti-corrosion measures carried out by the Bełchatów lignite mine. Initially the company was performing corrosion protective measures on regenerated and new steel structures. Over 15 years RAMB has become specialised in corrosion protection measures, production and installation of steel structures, as well as general construction and electrical works. Company's experience has been used in many projects, including many of the national scale. Currently company participates in projects such as: construction of the ZGOT 15. 400 stacker, the largest in the country, for the Bełchatów mine, excecution of specialised construction projects related to development of the new “Szczerców” strip pit, and construction of the superstructure and roof over the grandstand of PGE GKS stadium in Bełchatów. The company is also the main contractor for anti-corrosion works and construction of travelling belt routes to PGE Górnictwo i Energetyka Konwencyjonalna Spółka Akcyjna - Oddział KWB Bełchatów (Bełchatów Lignite Mine). Main activity profiles: anti-corrosion measures, steel structures, installation, hydro- and civil engineering, electrical works, machining, dehdyration, civil engineering, overhauls and operation of building structures, maintenance and overhauls of battery electric trucks, renovation of buckets, caterpillar track links, dehydration pumps and servo hydraulics.

Stal - Systems S.A.

Polish company

Stal-System S.A. possesses an industrial park equipped with high-tech machines allowing the company to produce over 600 tons of steel products a month. The company has opened relations with domestic and foreign partners, solidifying its position on the market of steel structure manufacturers. Stal-System produces elements for energy, chemistry and automotive industries and building construction. The company's offer includes: production of steel structures, construction of industrial buildings, producing support structures for electrostatic filters, overhauls of electrostatic filters, carburization systems, production and process lines, industrial machines, installation of industrial structures and machines, design office, turnkey construction projects. Additionally Stal-System offers comprehensive execution of industrial sites, complete with constructing support structures for power installations, ducts, tanks, boilers, overhaul of electrostatic filters, heavy frame construction, industrial buildings, canopies, overpasses and public utility buildings: magazines, offices, shopping malls. The company employs highly qualified and experienced staff, it is also one of the largest employers in its region and provides financial support for its local community.

Stieglmeyer  
Kępno Sp. z o.o.

foreign company

Stieglmeyer Kępno Spółka z ograniczoną odpowiedzialnością is a company that operates a production plants with over 11000 square meters of total area. The plants are located in strategic points with easy access to land based transport hubs. The company acquires raw steel and prepares it for further machining and welding. The preparation process involves cutting (of profiles, pipes, etc.), drilling, forming, lathing of small assembly components (screws, nuts, etc.). Then, elements are welded together to create ready to paint production components. Welding is done using the MAG technique by hand and in an automated process done by MOTOMAN and REIS robots. The finished components are then painted in an electrostatic chamber. After painting the components are assembled together and stored ready for transport, according to the companies transport plans. The company was founded in 1992 under the name WIKI-MET Sp. z o.o. and in 1997 the company signed a partnership with Stieglmeyer group. In 2010 Stieglmeyer bought WIKI-MET.

TML S.A.

Polish company

TML S.A. operates on Polish and foreign markets for more than ten years. Its activity focused on holdings. It specializes in designing and supplying high and medium pressure components, matrix forgings and forging accessories needed to create them. The target customers are energy, chemistry, petroleum and natural gas industries. Main materials used are boiler grade, austenitic steel and heatproof steel. Most projects are done comprehensively from the design phase to final installation. The company employs experts in the installation of produced devices and technical acceptance tests. The company is also an authorized reseller of chemical installation devices mafe by "CHEMAR". For seven years TML has been a supplier of spare parts for mines operated by PGNiG located in Zielona Góra. TML cooperates with the largest companies in the energy and pharmaceutical businesses. Through a large network of partnerships the company provides pipes, valves, t-junctions, steel sheets with Zinc protective layers, bars, forgings, profile and more.

ZBUD Sp. z o.o.

Polish company

The company owns production halls with an area exceeding 15,000 m². The company owns equipment for machining large sized components with a unit weights of more than ten metric tonnes. It has its own professional grinding facilities (three 18x4 cabins), paint shops (five 18 x 5 cabins and two painting areas 20 x 15) which enable drying components after the paint is applied. The quality control department hires operators performing magnetic and ultrasound tests on welded connections. The company has its own design office, which employs experienced mechanical and electrical engineers. ZBUD provides transprot services, including transport of extra-large cargoes, with relevant applications and piloting components with lengths exceeding 30 m. ZBUD's offer includes: close transport equipment like overhead cranes, other cranes, hoists, winches, lifts, and accessories like spreader beams, crossbeams; products for offshore applications: lifts and service equipment for drilling platforms, industrial steel structures, engineering services, advisory and trainings. The close transport equipment sector is served comprehensively: design of roadbed for overhead cranes, foudnations for other cranes, design, manufacturing and installation of equipment: overhead cranes, other cranes, hoists and winches, upgrades of existing equipment, maintenance and overhauls of own and supervised euqipment.

Zakład Metalurgiczny WSK  
Rzeszów Sp. z o.o.

Polish company

ZM WKS Rzeszów Sp. z o.o. is carrying out foundry and casting machining operations. Almost 90% of company's revenues are generated by export involving product supply to the most demanding sectors of global industry (Europe and North America). Customers of ZM WSK Rzeszów include companies operating in: automotive industry, power industry, railway engineering, machine industry, agricultural machinery production. ZM WSK Rzeszów Sp. z o.o. owns an aluminium foundry, cast iron foundry, machining department with a prototyping facility equipped with several dozen modern CNC machines, as well as own engineering office and a laboratory. In the context of casting and machining processes, the company has been collaborating for many years with various Polish universities, including AGH University of Science and Technology, Warsaw University of Technology and Silesian University of Technology. Company's products and services include: designing castings, CNC machining, aluminium castings, iron castings and machinery. ZM WSK Rzeszów is broadly applying computerised support for production processes. The machining centre is specialised at machining aluminium castings and mechanical components. ZM WSK has a large, well equipped department which manufactures euqipment for casting aluminium alloys, iron and for forging.

ZTW Explomet Sp. J.

Polish company

Explomet specializes in the technology of the explosive cladding of metals. By this method we produce cladding plate and forged discs, cladding bars and pipes. These materials are mainly designed for the construction of process equipment used in chemical plants, including electrochemistry, power plants, including nuclear power. Increasingly cladding materials are used in power industry, based on renewable sources, eg. in geothermal energy as well as in the electro-energetics and electrometallurgy. From the explosive cladding materials are performed: tubesheets for heat exchangers, cold and hot pressed various types of bottom for apparatuses and tanks, rolled cans for shell, welding connectors, and current contacts and connectors, etc. Explomet technologies are achievement of own R&D actions only. Produced cladding materials are subjected to a standard test procedures and control in line with the provisions of ASME / ASTM, EN, AD-2000 AD Merkblatt W8 or other specified by the customer. Each batch of made products is receiving full documentation of the production process and quality certificate. Explomet has own laboratory for NDT, DT. At the request of the customers test procedures can be performed in the presence of inspectors from the indicated, notified societies. Quality certificates can be issued according to 3.1 or 3.2 standard.

BDS Instal Sp. z o.o.

Polish company

BDSInstal Sp. z o.o. is a production and service company for installation business. The company was founded in 2008 in Rzeszów. Its business focuses on performing installation works for all kinds of indoor mechanical and sanitary systems, as well as external networks and interconnections, especially of heating preinsulated networks, gas networks and process networks. The company also constructs ventilation, air conditioning and dedusting systems, works on electrical systems and system automation, access control systems, monitoring systems, telecommunication and I&C. Offered services also include installation of all kinds of equipment and process lines at manufacturing plants and overhaul and/or new-build works involving steel structures of buildings and steel supports for equipment and systems. Since 2013 the works have been also performed at sites abroad. In cooperation with its foreign specialist partners, the company may also offer: system engineering and advisory during the project development process, obtaining building permit, execution of construction works. The company also provides advisory at every stage of a project.

CFiK Klima sp. j.

Polish company

The company CFIK Klima GP specializes in the comprehensive execution of sanitary installations, in particular: work space dusting, ventilation and air-conditioning, central heating system, ice water and fire systems. It has its own facilities design, in close cooperation with device manufacturers ventilation and air conditioning. In addition to the service activities, CFIK Klima manufactures cartridge filtration devices to purify air from pollutants emitted at the workplace. Based on the manufactured equipment, the company designs and produces drainage sumps job of welding fumes, grinding dust, oil mist and others. The company cooperates with the manufacturer of filter cartridges - the German company R + B FILTER GmbH, of which is the official representative in Poland. They offer a full range of filter cartridges, in particular removable devices for KB and FP type assembly and production. Apart from the production of individual components, the company designs and makes filter stations composed of modular elements, situated on a common support frame. The company provides postwarranty service performed installation systems and participates in the implementation of investment projects or tasks renovations.

Energia Sp. z o.o.

Polish company

Energia Sp. z o.o. was founded in 1996. It is a trade and service company which provides services from creating a technical design up to installation and commissioning of equipment. Company offers personnel training courses and full warranty and post-warranty maintenance for delivered products. Energia performs investment and overhaul works concerning: air conditioning systems, district heating systems, application software of energy conversion processes. Scope of services offered by Energia includes: engineering, procurement of equipment and materials, installation of equipment and systems at the site, commissioning of specialist equipment and network control, warranty and post-warranty service. The company offers: air conditioning for application in offices, shops, studios or computer rooms; comprehensive deliveries of ventilation equipment and systems for industrial and public building applications; instrumentation and control for ventilation and air conditioning systems, heat exchange facilities, boiler plants and pumping station. Energia ensures also warranty and post-warranty service for all delivered equipment. All offered equipment is tested at company's own laboratory.

Energoaparatura S.A.

Polish company

Energoaparatura SA is a company operating on the market of specialized construction works. The main scope of provided services includes laying down electrical installations and systems of automation and control. Energoaparatura SA offers preparing design documentation, driver programming, manufacturing structural installation components, supplying complete instrumentation, installation, and tuning services followed by preparing full post-completion documentation. They also lay down installations for low and medium voltages, cunstruct, maintain and upgrade distribution boards, high and medium voltage power lines, automation and control systems, monitoring installations, manufacture complete wiring racks, driver racks, laying down wiring for control systems, optic cables, and provide startup services for the installed systems. Energoaparatura also offers turnkey projects for electrical systems above 1kV rated voltage along with preparing full techical and esign documentation and supplying the instrumentation. Lastly the company can provide manufacutring ready to use control panels, rack for wiring and hardware and more based on own designs or provided by the customer.

ETP S.A.

Polish company

ETP S.A. is a company which combines elements of civil construction works, installation of electrical systems and prefabrication of control cabinets and electrical switchgears. The company performs installation of strong- and weak-current electrical systems at public build-ings, logistical centres, shopping malls and industrial facilities. It of-fers monitoring, control and electronic safety systems which enable facility management. ETP S.A. provides hydrotechnical construction services, including: construction of dams, water reservoirs, dikes, river regulation, bank reinforcement and other hydraulic engineering faci-lities. The company also performs general construciton works, mainly for industry, involving reinforced concrete, earth works, demolition and other specialised construction works, as well as road and bridge construction. It offers deliveries and installation of complete energy distribution, instrumentation and control systems for overhauled, up-graded and newly built facilities from different industries. It ensures full supervision of water systems from the treatment to distribution to purification. It offers control, automation and power supply systmes for sewage treatment plants and water treatment stations. The company performs full scope of services for electrical systems. ETP S.A. creates designs of safety systems, control and automation for high voltage distribution equipment, and manufactures complete cabinets for high voltaege secondary circuits.

Euro - Weld Sp. J.

Polish company

Euro-Weld is an engineering company specialised at construction of complete industrial process systems, pipelines, tanks and steel structures. It is acting as EPC contractor or subcontractor respon-sible for engineering, installation, upgrade and overhaul of process systems for industry (chemical, petrochemical, power, paper, phar-maceutical, food, shipbuilding and offshore), as well as water treat-ment and environment protection facilities. Euro-Weld offers works related to: industrial systems, process and transmission pipelines, pressure vessels, power boilers, steel structures and skids. These works involve products made of steel: carbon, alloy - including stain-less (especially austenitic, duplex, super duplex), copper and nickel allos (CuNi, CuNiFe). The company has following technical potential: 1300 m² production hall with two overhead bridge cranes with a capacity of 5 tonnes each, used to prefabricate pipelines, tanks and steel structures; 4000 m² storage yard; complete specialised equipment (e. g. Ermaksan Power Bend Falcon 3100 x 220 press break, controlled numerically in five axles, with maximum bending length of 3100 mm and maximum total pressure of 220 tonnes) as required for prefabrication and assembly.

FHU Darpin

Polish company

DARPIN company specializes in introducing innovative, advanced and energy saving solution into chilling and heating industries as well as power generation from renewable energy sources. The company's offer includes machine and device cooling systems for application in various branches of industry for maximal recovery of waste heat for heating purposes (interior heating, water heating). The company produces chillers, dry-coolers, absorption chillers, cooling towers (in closed, open and hybrid configurations), hydraulic modules (for pumping stations), installation of industrial heating and cooling systems, organic rankine cycle systems, cogeneration devices and also offers servicing and technical consulting. Moreover DARPIN provides design services in combination with comprehensive construction of cooling systems, turnkey compressed air installations and supplying peripheral supporting devices. The company has also opened a new department – Biuro Energetyki, which is tasked with optimizing the use of renewable energy sources. DARPIN is present in Poland, Germany, Austria, Belgium, Denmark, Ukraine, the Czech Republic and Belarus.

Grupa Azoty Prorem

Polish company

The Azoty PROREM Ltd. Group operates in the field of supervision, construction and commissioning of newly built and operated installations. The services are available mainly in the following industries: chemical, petrochemical, power. Particular attention the company focused on a strategic partner Zakłady Azotowe Tarnów-Mościce SA, where the main task it the on the spot service, maintenance and repair of production facilities. The Azoty Prorem Ltd. Group is a spin off of a strong entity focused on the areas of maintenance and repair of machines. Among the services provided include: full industrial service, research, diagnostic machines and other services, maintenance, installation (industrial equipment and installations, heating centers, exchanger, gas installation, ventilation, transmission pipelines, steel structures (overpasses, halls, sheds) equipment, cranes), supply (industrial turbines, compressors, blowers, pumps, industrial valves). The machinery, which the company has, is constantly being upgraded, in addition to being modernized workshops. The company cares about improving the qualifications of its employees through training and courses, allowing the implementation of modern technology, repairs and installation of chemical devices.

H. Cegielski  
Energocentrum Sp. z o.o.

Polish company

Business of H. Cegielski - Energocentrum Sp. z o.o. is focused on technologies supplying energy carriers for business operators and providing energy-related services. The company also offers mechanical services. Offer includes operation of district heating substations, networks and systems, distribution transformer stations, cable lines, industrial switchgears, electric machinery, compression reduction stations and networks of pipelines for natural gas, oxygen, acetylene, compressed air, water supply and sewage networks and equipment, underground intakes of industrial water, ventilation and chilling devices, lifts, machining equipment, wheeled vehicles. H. Cegielski-Energocentrum is a holder of following concessions issued by the President of the Energy Regulatory Office: for electricity distribution DEE/79/340/W/2/208/PJ; for electricity trading OEE/522/340/W/2/2008/PJ. H. Cegielski-Energocentrum has concluded contracts concerning generation and distribution of energy carriers and related services. The company is able to maintain in full serviceability equipment, networks and systems needed to carry out deliveries of energy carriers and related services. Technical and financial conditions of deliveries are agreed upon with customers upon negotiations, according to the relevant laws. The company is authorised by the Office of Technical Inspection to manufacture and overhaul equipment, which is subject to Office's supervision in following areas: lifts, pressure equipment, gas pipelines.

Hydro Partner  
Sp. z o.o.

Polish company

Hydro-Partner Sp. z o.o. was established in 2001. It is specialised in construction of industrial hydraulic systems. It delivers and installs at site systems for pumping stations, industrial valves, hydrophor valves, water treatment plants, compressors, blowers, motors, mixers, separators, settling tanks, as well as control, monitoring and visualisation for systems provided with instrumentation. The offer also includes vehicle monitoring, and electrical hydraulic and monitoring system maintenance. Production facility manufactures piping and sewage tanks. The company is carrying out construction, deliveries and upgrades of sewage pumping stations, construction, deliveries and upgrades of control, monitoring and visualisation systems; construction, delivery and upgrades of hydrophor units; deliveries and upgrades of water treatment plants, deliveries of pumps, spare parts and packings, supplies of industrial valves and fixtures, deliveries of tanks, compressors, blowers, motors, mixers; supplies and upgrades of sewage treatment plant equipment, deliveries of separators and sedimentation tanks. The company owns a technical infrastructure - manufacturing halls with machinery needed to perform production processes.

Instal - Lublin  
Sp. z o.o.

Polish company

Instal-Lublin Ltd. belongs to the Awbud group. It operates in the Polish branch of installation services. The scope of business are comprehensive works including the supply, commissioning and maintenance of sanitary and technological installations. The team consists of well-educated and highly qualified managers, engineers and workers. Appropriate technical expertise, specialist staff and years of experience have allowed the company to rapid development, able to make large investments and efficient execution of commissioned works. The advantage is a comprehensive offer that includes design, supply and installation: heating, ventilation, air-conditioning, sanitary, technological, sprinkler systems. Production Plant is specialized in the production of components of ventilation and air conditioning of galvanized steel, acid and plastic. Ducts and fittings are made by automatic production line. The company also has experience in producing dedusting, tanks and steel structures. Regardless of the installation activity, the offer is the rental of property located on the premises of the company such as halls, warehouses and smaller office buildings, as well as the varying size of the plot.

KMW Sp. z o.o.

Polish company

MW Engineering manufactures air processing units, ventilation ducts, welded components and structures for ventilation systems dedicated for industrial applications, and for nuclear and conventional power, shipbuilding and offshore sectors. It specialises in installation of complete systems. The scope of its operations can be expanded with design and specialist installation, in cooperation with an affiliated company KMW Instal & Project. Air processing units and other products under the KMW brand dedicated for the nuclear sector applications underwent special strength tests, meeting seismic requirements of the Olkiluoto 3 power plant in Finland. We manufacture pressfit and welded ducts of zinc galvanised, low-carbon, and austenitic stainless steel. Zinc or paint coated ventilation ducts and welded structures are manufactured in accordance with the requirements of ISO 1090-2, ensuring maximum resistance to nuclear contamination. TN series hybrid silencers are characterised, amongst the others, by their susceptibility to seismic exposure. KPP-120 series fire dampers of a seismic design are dedicated for applications at facilities in the nuclear industry sector.

Lotos Serwis  
Sp. z o.o.

Polish company

Lotos Service Ltd. provides services in the field of maintenance, operating and installation, construction repair and diagnostic measurement. It has wide-ranging permits: Ex electric, supervision, railways and a significant number of certificates. Lotos Service carries out tasks ranging from concept design through completion and coordination of supplies, execution and handing. Lotus Service Ltd. cooperates with companies such as Technip KTI, Lurgi, CB & I Lummus GmbH, Honeywell Fluorine. The operate in the following industries: mechanical, electrical and automation of control systems. Moreover LOTOS Service Ltd. offers: mechanical services (inspections, repairs and the work of assembly and commissioning), production of chemical apparatus (construction, renovation and modernization), electrical services (electric maintenance and repairs), service automation (design-implementation, renovations, installation, maintenance and continuous measurement and diagnosis), diagnostic machinery and equipment (vibroacoustic diagnostics, laser alignment units, balancing, laser alignment and leveling the foundation frame), transport services, general contractor and services for the marine and mining industry.

Termo - Kor Sp. z o.o.

Polish company

The THERMO-KOR Repair & Construction Company been present on the market since 1992. It has a qualified staff with higher technical education, with a long-standing practice on domestic and foreign construction sites in the following industries: corrosion, insulation and construction related. The company operates throughout the country as well as on the German, Latvian and Finnish markets. The enormous “test field” for the developed technologies of new materials and workmanship was and is PKN Orlen SA. By working closely with companies from Plock the company could implement European and world achievements in the field of protection against corrosion. Detailed offer companies from the insulation and corrosion protection are: fabrication and installation of insulation: pipelines, energy channels, air conditioning ducts and ventilation, heating and turbines. Execution of works in the field of corrosion: surface preparation various cleaning methods using different abrasives, corrosion protection paint coatings using airless spray using the latest paint sprayers, metal spraying, fire protection intumescent paint coatings. Since the beginning of PRB THERMO-KOR Ltd. secured corrosion approximately 800,000 m2 and 450,000 m2 insulated.

Przedsiębiorstwo Instalacji  
Sanitarnych i Ogrzewania S.C.

Polish company

Since its foundation, the company’s core business are indoor systems. The Przedsiębiorstwo Instalacji Sanitarnych i Ogrzewania S. C. has experience in construction water supply networks based on various technologies, using pipes of steel, nodular cast iron, PE or PVC within full range of diameters; construction of sewerage using pipes made of concrete, vitrified clay, PVC or cast iron with full range of diameters; construction of roads and pavements, workshop auxiliary production for all areas mentioned above, landscaping and street furniture. The crew consists of experts involved in construction of sewerages, waterworks, district heating networks and gas pipeline networks. The management personnel are members of the Silesian District Chamber of Construction Engineers and have required qualifications to manage and supervise performed works. Currently the company owns full technical equipment needed for earth and installation works using every technology, including following equipment and vehicles: “Caterpillar” backhoe loaders - 3 pcs., “Caterpillar” wheeled swing shovels - 3 pcs., “Caterpillar” microexcavator, self-tipping lorries: Volvo FE, Volvo FH, delivery vans - 5 pcs, “Wacker” sheepsfoot roller, “Wacker” 3.5 t roller, diesel welders, PE pipe welding equipment, asphalt cutting saws, compactors, vibrators, pumps, diesel generators.

Montorem S.A.

Polish company

Przedsiębiorstwo Inwestycyjno-Remontowe MONTOREM S.A. executes projects for the power industry, foundries and chemical and refining plants. It offers services in constructions and renovations, specifically: designing installations and structures, renovations, constructing biomass installations, dust collectors, transportation systems for bulk material, thermal insulations for cold and hot applications and works in the power industry. The renovations offered by MONTOREM include services such as: supplying all materials, installation of electrical devices and installations, heating ventilation and air conditioning systems, construction of steel structures, insulation montage, anticorrosive technologies. The company performs works from design phase through the construction phase to exploitation of the installed systems. It cooperates in the field of technical expertise with IChPW – Zabrze, GIG Kopalnia Doświadczalna “Barbara”, Energopomiar Gliwice, AGH University of Science and Technology and Cracow Univeristy of Technology. MONTOREM has carried out turnkey construction projects of biomass installations in 7 power plants and combined heat and power plants in Poland.

Energopiast Sp. z o.o.

Polish company

Energopiast supports the environmental efforts by being involved in the reduction of nuisance activity carried on the work and natural environments. The Energopiast company currently has five plants: Department Acoustic Insulation, Construction Works Department, Department of Economic Services, Department of Metalworking and Paint Shop, the Department of Belt Transport. The offered services are focused on obtaining optimal solutions that deliver tangible economic benefits, legal and social issues. Co-operation with qualified subcontractors ensure the use of advanced materials. Currently the offer of the company includes services such as noise reduction: comprehensive work in combating threats caused by excessive noise, design, manufacture, installation and maintenance of the structure of acoustic and noise absorbent - insulation, measurement and analysis of nuisance plants, development of methods and concepts mute objects and devices, selection, execution and installation of silencers, acoustic insulation and vibration dampeners, as-built measurements of the effectiveness of the solutions. Construction industry: architectural design, general construction, assembly, installation work, work at heights. Economic services: comprehensive cleanup work, design, planting, care and maintenance of green areas, technical maintenance of buildings, washing work clothes and underwear.

Inprex Sp. z o.o.

Polish company

Service-Production-Trade company PUPH "INPREX" performs installation and commissioning of boiler equipment and burner systems at industrial facilities and power plants. The company has established own manufacturing plant of boiler burners, and pressure and non-pressure equipment. Currently it delivers equipment for boiler ignition systems. Recently the company has extended its offer with comprehensive supplies of control systems and boilers for refinery process furnaces. Inprex designs: instrumentation and control for oil and gas systems, equipment and systems for firing power and industrial boilers with fuel oils. Designed equipment and systems are provided with pressure and temperature control systems governed by microprocessor controllers with operator panels, which enable recording and reading operating status of a burner at any time. Production activity involves manufacturing components and devices for power plants, including: oil burners for boilers, gas burners for boilers, oil burners for aggregate drying facilities, oil starting burners with high-energy ignition systems, supporting or start-up gas burners for power boilers designed for variety of combustible gases, oil/gas burners for both liquid and gaseous fuels, pump units and oil treatment stations, oil lances - for high- and low-pressure systems.

PZRE Bestal Sp. z o.o.

Polish company

The company Bestal has provided services in the energy industry in the field of pipework, valves and boilers for power generation since its inception. The production department of the company is equipped with the newest machines and is tasked with the production of all elements of pipework and boilers as well as cooperation with the construction department to react quickly to problems during installation works. Bestal's construction department is responsible for the installation of the company products at customers' facilities. The production department performs tasks widely varied in the size of pipework and quality of materials used depending on the clients' needs. In the past year Bestal has carried out assignments for Foster Wheeler and Alstom Power at the construction site of a new power unit in Łagisza power plant – the company would overhaul pipework and valves from DN 20 (20mm in diameter) up to DN 500 (500mm in diameter) made from various steels like S235 or 13CrMo4-5. The company also performs bending of pipes and profiles. Current priority for Bestal is to develop a wider offer in bending services.

Termika Sp. z o.o.

Polish company

Thermals Ltd. is engaged in complex construction in the branch of technical insulation industry. It provides services in the energy and petrochemical industries. It also has a significant contribution to the insulation in the maritime industry. Along with the refrigeration industry, the market for maritime services is a key aspect of the company's polyurethanes foamed insulation. As part of the activities performed in the energy sector in addition to the typical hot insulation, specialized insulation including.: soundproof screens, cabins and enclosures for machinery and industrial equipment, producing excessive amounts of noise and vibration, acoustic insulation of channels, fans, blowers, soundproofing collectors silencers, as well as air conditioning and ventilation systems, specialized surveys of isolation. It also offers services related to the installation of air conditioning and ventilation. The company conducts retail and wholesale of thermal insulation materials and specialist construction chemicals. In addition, newly-built machines stocked with a variety of machinery for the fabrication of sheet metal influence to improve the production and cost reduction. Thermals Ltd. has its own transport and storage facilities. It is also one of the largest wholesalers of insulating materials in the northern part of Poland.

Termokor Kaefer Sp. z o.o.

foreign company

Termokor Kaefer Sp. z o.o. specialises in deliveries of materials and services related to industrial insulation and protection against corrosion. The company is a successor of a Thermal Insulation and Corrosion Protection Works Enterprise TERMOKOR founded in 1973. Currently Termokor offers solutioesn for: power industry, chemical industry, petrochemical industry and mining. Termokor Kaefer designs optimal insulation solutions and carries out pipeline and complex installation projects. When building or maintaining extensive industrial systems, company’s installation crew supplies scaffolding, fire protection measures and insulations. Services provided by the company include carrying out overhauls and upgrades of heat- or cold-preserving insulations, acoustic insulations, anti-corrosion measures (of steel structures, tanks for fuels, chemicals and water, pipelines, equipment, industrial and district heating systems, bridge structures and metal sheets), protection against fire for rooms based on application of non-flammable materials. As an international company, Termokor Kaefer supports its operations with technical knowledge and quality management system. Since 2008 the comapny is a part of KAEFER Group, a global corporation represented in over 50 countries from Canada to Australia.

TKT Engineering  
Sp. z o.o.

Polish company

The company delivers comprehensive technical solutions for building equipment, involving delivery, installation, commissioning and maintenance in the sanitary engineering. It offers deliveyr of equipment, as well as complete installation of technical equipment for industrial and public utility buildings, including: installation of ventilation systems, refrigerating and air-conditioning systems, heating and district heating solutions, compact heat exchange stations, oil-gas boiler solutions, sanitary systems, gas systems, process and industrial systems. Activity includes: detailed engineering, creating as-built documentation and analysing technical solutiozn, selecting components and supplying equipment and materials, installation of process networks and supervision of works performed by subcontractors, commissioning of delivered system, measurements and adjustments of completed systems, warranty and post-warranty services. Also offered are: water demineralisation stations, oxygen supply, welding gas supply, steam and condnesate systems, process water treatment, process water cooling systems, heat recovery from production processes, technical exhaust draughts, de-dusting systems in production halls, clean room technologies for pharmaceutical, biotechnological, food, cosmetic and health industries: advisory, engineering, qualification (DQ, IQ, OQ), system validation, installation of complete euipment of clean rooms, instlalation of ventliation and air conditioning systems, installation of compressed air systems, medical gas systems, vacuum systems etc.

ZPrAE Sp. z o.o.

Polish company

Zakład Produkcyjny Aparatury Elektrycznej Sp. z o.o. (Electric Apparatus Manufacturing Plant) provides production services, assembly and measurement for the energy sector. The company is located in one place, has its own large production and service facility in Siemianowice Śląskie. The company specializes in the production of protection devices and control and measurement equipment, prefabrication of security cabinet sets, measurement and control, as well as rack-mounted self power supply systems for power stations. The main protective automation devices designed and produced in ZPrAE Ltd. are protection for busbars and systems for reserving switches for high and very high voltage. These safeguards and reserving systems switches (TSL / TL / TS) of different operation types function in national switching stations [400, 220 and 110 kV]. Besides the production activity the company performs periodic post-assembly testing and supplied equipment protection devices, as well as studies failback. The specialty of the company is a security service busbars and URW various types, on behalf of the PSE Units and Power Plants. The company also provides alarm systems for reserve power stations. MSA type alarms are used both for newly built or modernized plants.

APC Presmet  
Sp. z o.o.

Polish company

APC Presmet is a service company offering manufacturing of largesize steel structures and pressure apparatus base on documentation received from client as well as dished heads as its own product. Company has significant experience in manufacturing both steel structures such as: kiln shells, stator frames, silos, jiggers, industry fans and pressure apparatus such as: heat exchangers (including steam condensers), re-actors, steam drums etc. Above equipment is manufactured of carbon steel and stainless steel in wide range of grades and of titanium. APC Presmet offers also innovative methods of steel structures manufacturing on the basis of precise large format cutting and machining. APC Presmet developed successful co-operation with world leaders in their fields: GE Renewable and GE Power (formerly ALSTOM), Siemens, ABB, SPX Balcke-Dürr, AMOF Fjell and Fjell Technology Group, Allmineral, Sepro Mineral Systems. APC Presmet provides services in the field of plates cutting (thermal cutting – up to 250mm, plasma – up to 100mm, laser – up to 25mm) and shot blasting of plates in class Sa 2,5. APC Presmet has furnaces for heat treatment, hydraulic press with tonnage 7000t and its own NDT Laboratory. Furthermore there is independent Destructive Test Laboratory on APC Presmet territory.

Alstom Sp z o.o.

foreign company

Alstom operates in power engineering, transmission grid and transport sectors. It owns production facilities in Poland: in Elbląg - a turbine factory, as well as cast iron and cast steel foundries; in Wrocław - a generator factory, Alstom's European centre specialised at turbo-generator development; in Chorzów - a rolling stock factory; in Łódź and Warsaw - a turnkey project delivery organisatio; in Katowice - an organisation supplying services and equipment for transmissiong rids. Owned facilities enable local production of all essential equipment, as well as their maintenance fby Alstom service centres in Poland. Approximately 320 medium and large steam and gas turbines installed in power plants over the world have been manufactured at Alstom Power production facilities located in Poland. Cast steel and cast iron foundries located in Elbląg supply castings to other Alstom factories in the international market. Alstom Power plays a significant role in constructing modern power engineering in Poland, by delivering many essential infrastructural projects in power industry. Alstom Grid implements a technology of SF6 insulated switchgears in Poland, offering integrated and comprehensive turnkey solutions, a wide range of products, as well as technical and maintenance support at every stage - from power generation, to transmission and distribution, to delivery to final consumer.

Polish company

BELMA has sequentially produced equipment for railways, automotive, defense industry, mining and implemented various kinds of industrial services. It has the appropriate technical and production potential and highly qualified team of experienced engineering and technical staff. BELMA has its own design offices, and employs specialists in the field of mechanics, electrical engineering and electronics. Using the process of designing and manufacturing computer support systems such as CAD / CAM both 2D and 3D company provides its clients with comprehensive, integrated service "from design to product". The plant is now a member DIVISION AMMUNITION within the Polish Defence Holding, giving it increased opportunities for growth and strengthened market position. The company offers a full-service machining (CNC turning, CNC milling, turning the conventional, complementary services) electroplating services and measurement services. Products BELMY work in the mining industry, shipbuilding and chemical industries. Offered by Belma electrical equipment are own design solutions. Company has its own electroplating station providing plating services with the use of zinc, tin, nickel, chromium, copper, silver, anodizing, chromatin of copper and aluminum.

BZUD Sp. z o.o.

Polish company

BZUD Sp. z o.o. offers: complex deliveries of lifting equipment form design to acceptance, including: electrical winches and hoists, manual hoists, overhead and other cranes, cross beams, lifting accessories, spare parts for BZUT and Podem lifts, power supply lines, technical advisory, installation of lifting equipment, designing and prodution of non-standard equipment. BZUD offers bridge cranes for industrial applications: top running single-girder and double-girder, suspended single-girder and double-girder and full gantry cranes. Except for pro-duction, the company also carries out trade, offering a range of spare parts and accessories for electrical hoists made in Poland and Bul-garia: BZUD, Polblok, Podem, including: cable loop layer, head blocks, clutches, gear wheels and geared shafts, brakes, motors, transmis-sion gears, gripping devices, pulley blocks, roller slings ZKR, clamp slings ZK, endless strip slings ZPO, loop slings ZPP, single leg F and S slings, two- and four-leg (2F, 4F) slings, chain slings ZŁ, non-standard compponents, rail fittings, manual cams PZ. All components are pro-vided with relevant design documentation and use permits. BZUD is a representative of Yale company in Poland.

Chemar Rurociągi  
Sp. z o.o.

foreign company

Chemar Rurociągi Sp. z o.o. designs, manufatures, delivers and installs complete piping systems, pipeline components, fixtures and suspension elements. The products are made of elements of carbon, alloy and high-alloy steels, including martensitic steel grades X10CrMoVNb9-1 (P91) and X10CrWMoVNb9-2 (P92) used for sys-tems operating at supercritical steam pressures and temperatures at power generation units. The company offers a wide range of steel and cast steel valves for medium and high pressures, including isola-tion valves, isolation valves with control heads, non-return valves, isolation/non-return valves, bellow valves, acid-resistant valves an fittings, separation valves, sediment tanks, control valves, safety tanks, wedge valves in cast and forged varieties, non-return flap valves, water level indicators, electromechancia drives, transmission gears, manual control heads, remote control systems for valves. The company also provides services involving machining and welding, as well as maintenance and diagnostics; the plant is able to carry out structural strength tests at hydraulic testing stations, the largest of which is capable of handling an element with a length of 1. 5 m and diameter of 700 mm (clamp pressure of 300 tonnes) and at steam test station with full pressure and temperature parameters of up to 190 bar and 570°C.

Cheminstal S.A.

Polish company

The main activity of Cheminstal includes installation, upgrades and overhauls of equipment and systems in poewr industry and other industries, as well as chemical and hydrodynamic cleaning. Main ac-tivities are related to commercial power generation, industrial power generation, metallurgy facilities, coking plants, sugar industry, chemical plants, food industry and distilleries, automotive industry and heavy industry. The company offers high quality services of cleaning and upgrading all kinds of process systems and industrial pipelines, cool-ing towers (scopes including: upgrade of the structural part, outer coatings, inner coutings, trays, overhauls of concrete columns and ferroconcrete structures, anti-corrosive protection, re-profiling steel components, re-profiling oncrete components, application of protec-tive coatings, exchange of steel liners or Ondex liners and others), vessels, heat exchangers etc. Cheminstal S.A. has developed and pat-ented a technology for regenerating decks in forced- and natural-draft cooling towers. The company also provides chemical technologies and solutions for degreasing, cleaning and decalcification of systems, both for industrial and individual customrs, as well as installation, deinstal-lation and upgrades of system,s PE, PP and HDPE pipelines, warranty and post-warranty service, design documentation and crew trainings.

Chemoservis S.A.

Polish company

The company has technical capabilities and necessary certificates for overhauling: heat exchangers, process columns, process reactors, coil pipes, mixers, filters, conveyors etc., tank equipment, process and transfer pipelines. Technical equipment enables manufacturing and installing process and transport piping sysstems, installation of industrial machinery and equipment. The company performs com-prehensive overhauls of systems during outages and maintenance works necessary to preserve equipment’s serviceability. Also offered are overhauls of equipment, e. g. impeller, piston and geared pumps with cord and mechanical packings for energy carriers and chemicals such as acids, caustic alkali, brines, latex, styrene, ethylbenzene, chlorine etc., of gear transmissions, worm gears, hydraulically con-trolled gears, hydraulic clutches, screw extruders, expansion driers, vibration transport equipment, belt conveyors, draining screens etc., blowers, fans, mills, hydraulic presses, hydraulic and pneumatic systems, overhauls of valves, overhead cranes and weighing equip-ment, overhauls of isolation valves for chemicals and energy carriers, overhauls of STRACK and KLINGER valves, overhauls and adjust-ments of safety valves, overhauls of cranes, lifts, cargo elevators, cargo-personnel elevators, personnel lifts, overhauls of weighing equipment with preparation for legalisation.

Crist S.A.

Polish company

Crist company was founded in 1990 and in 2010 it was converted into a limited stock company. Crist S.A. is involved in construction of ships, offshore structures, steel structures, marine engineering and civil engineering. In Europe it has built vessels for raising and maintaining offshore wind farms. The company is participating in execution of projects involving specialised offshore structures, marine transport and vessels for exploiting marine resources. Thecompany is cooperating with customers from Poland, Germany, Norway, Denmark, Finland, Iceland, France, Belgium, Netherlands adn Scotland. From the very beginning the company has been involved in shipbuilding sector. The offer in this area includes construction of ships for serving fish farms, container vessels and tugs, using up-to-date echnologies. Crist S.A. also operates in construction sector, including construction of hydraulic engineering structures such as river locks. In offshore business, the company offers construction

Eckert Automatyka Spawalnicza Sp. z o.o.

Polish company

Eckert company is a modern and innovative company, specializing in a production of CNC cutting machines. The company was founded in 1990. Headquarters are located in Legnica and has a branch in Rennerod, Germany. Four manufacturing plants, warehouse and office building spreads over 25000 square meters area. Sophisticated infrastructure and appropriate organization of work allows to manufacture up to 30 cutting machines per month. Innovation is our philosophy. Over 25 years in cutting machine industry, we created so many modern and unique solutions on a global scale. As one of the few manufacturers in the world, we offer the all four cutting technologies which are custom designed to their needs. Our comprehensive product range, experience and high production capacity make us trust worth and reliable partner in the implementation of innovative solutions. Nowadays Eckert means: top european cutting machines manufacturer in the all technologies, established brand since 1990 based on our great experience, over 1300 worldwide completed projects, numerous patented proprietary solutions, leader in research and development, 30 specialized engineers and CNC designers

Elana-Pet Sp. z o.o.

Polish company

One of the main areas of activity of ELANA PET company is construction of machinery, steel tanks, including equipment for chemical, food, steel and paper industries, construction of pressure and non-pressure vessels and heat exchangers. Along with traditional metalworking technologies, the company offers nitriding by ionisation. ELANA PET carries out maintenance, upgrades, repairs and operation support for production facilities. The company is specialised at relocating machinery, production lines and entire factories. Depending on customer needs, ELANA PET's process experts may develop technical documentation and drawings for the manufactured parts. Following metalworking technologies are used: machining (on universal/numerically controlled/ vertical lathes, boring machines, recessing machines, milling machines, hobbing mahcines, roll grinders, surface grinding machines, vertical grinding machines), welding and regeneration works (metla sheet cutting - plasma/gas cutting, shaft/hole padding), thermal treatment and thermochemical treatment (heat treatment surfaces, nitriding by ionisation), dynamic balancing. The company has own NDT laboratory which performs non-destructive examinations (radiography, ultrasonography, ultrasonographic thickness measurement with a thickness gauge and defectoscope, penetration tests, magnetic powder inspections, visual inspections) and tests of mechanical properties (impact tests, bending tests - at ambient temprerature, static tensile test, hardness measaurement, metalography).

ELPRO-7 Sp. z o.o.

Polish company

ELPRO-7 offers technical and financial services for project development phases. Offered range of services includes: engineering, installation, overhauls, repairs, periodic and commissioning testing of electrical systems and equipment (power supply, industrial and other) at all kinds of facilities and at all voltage levels. Main systems include main drainage pumping stations, drives of electrical (synchronous) euipment, load-following reactive power compensation systems, power supply and control systems for industrial processes, automation for heating equipment (systems), medium and low voltage switchgears, direct current switchgears, high, medium and low voltage overhead lines and cable lines. ELPRO-7 is specialised in inspections, measurements and tests: measurements and repairs of 110 kV breakers, along with replacement of stand-off insulators, inspections and measurements of 110 kV power transformers including sealing, replacement of bushing insulators, measurements of 110 kV current-limiting circuit breakers, inspections and oscillographic measurements of on-load tap changers with replacement of damaged parts as necessary, testing of electrical protection systems, testing of electrical drives, voltage tests and identification of damage in power and telecommunciation cables, cable routing, measurement of efficiency and diagnostics of pumping units, measurement of bearing vibrations.

Elsta Sp. z o.o.

Polish company

Elsta Sp. z o.o. provides comprehensive electrical and instrumentation packages (E&I) for power industry as well as environment protection sector from the design phase – both installations and equipment – to commissioning and start-up. In terms of high-, medium- and low system integration, their offer is based mainly on Siemens, ABB, Rittal, Danfoss technical solutions. Moreover, Elsta Sp. z o.o. has gained considerable experience in mining industry, in particular in explosion hazardous areas (Ex). They also offer a number of after-sales services related to operation and maintenance (O&M) as well as service activities. Elsta Sp. z o.o. operate their business mainly in Poland, in Northern Europe – in Sweden in particular, as well as many Western European countries – in the Great Britain in particular. Therefore, they have established local entities: Elsta Sweden AB and Elsta Ltd. Elsta Sp. z o.o. performs supplies beyond Europe as well mainly to Russia and Southern America.

Energoinstal S.A.

Polish company

ENERGOINSTAL S.A. is a Polish manufacturer of boilers for power industry. ENERGOINSTAL S.A. is manufacturer of the finned tubes (the only in Poland and one of five in Europe) - essential component of heat recovery steam generators and heat exchangers, including tubes of P91 material for supercritical parameters. Another pressure component of boilers with significant quality are membrane walls, also supplied by the company. ENERGOINSTAL S.A. has a capacity to perform large and complicated work packages, including EPC deliveries of complete supercritical combined cycle power units with outputs reaching 400 MWeI. Except for power engineering, ENERGOINSTAL S.A. - within its capital group - also serves the construction business and operates in the market of electrical machinery. The offering also includes manufacturing, installation and maintenance of steel structures based on operation of own design office, which takes into account all process-related reuquirements of the project along with customer recommendations, as well as manufacturing of componnets of power plant pipelines, pressure vessels, pipes claddded with INCONEL 625 or INCONEL 686 nickel alloys, ventilation and dedusting ducts and non-standard industrial equipment. Moreover, the compnay has a research welding laboratory which offers a wide range of property tests for metals and welded joints.

Energomontaż - Północ Gdynia S.A.

Polish company

Energomontaż-Północ Gdynia S.A is a company where the main area of its activity is the production of complex steel structures for the offshore and energy (including nuclear and renewable) sectors and the chemical and petrochemical industry. It belongs to a group of MARS Shipyards & Offshore, a Polish manufacturer of highly specialized, fully equipped steel structures for the offshore sector, energy (conventional, renewable and nuclear), chemical and petrochemical industry and the shipbuilding industry. The company realizes reconstruction of specialized units to support offshore wind farms and offshore industry. The company possesses production equipment enabling: precise cutting of curved sheets, tubes and profiles, plate bending and rolling with a thickness up to 200mm, machining large parts, the application of corrosion protection in chambers with electronically controlled temperature and humidity. Crane facilities, allows construction of large gauge elements to the weight of approx. 4,000 tons, giving it ample opportunity for the construction of certain elements for nuclear power plants, reducing the costs of any transport, increasing its work and production rate. In addition, the company's location enables the production of large structures without having to worry about problems associated with transport and loading.

Energop Sp. z o.o.

Polish company

Energop Sp. z o.o. is a member of the group MARS Shipyards & Offshore, which in turn is a member of the Polish Defence Holding. The company is localized near Sochaczew, 50 km from Warsaw and 20 km from the A2 highway which is an important factor in transport. The company's industrial plant has a total area of 25000 square meters and the storage area has 19000 square meters. The plant's equipment allows for production of elements weighing up to several thousand tons. The main line of business of ENERGOP company includes the prefabrication of complete high-, medium- and low-pressure pipelines and transmission pipelines for the power, petroleum and chemical industries, as well as for industrial building construction and the extractive industry (oil platforms). In addition, our company manufactures: pipeline elements (bends, reducing pipes, T-pipes, flanges, hangers and supports), pressure and non-pressure rectangular and circular vessels, made of carbon steels, alloy steels, austenitic steels and other Duplex-type steels, absorbers for the Flue Gas Desulfurization Plant, reactors for the Flue Gas Denitration Plant, reactors for the water degassing stations in power plants, structures for the offshore industry, main and auxiliary structures, flue gas passes and air conduits, Energop provides construction services with respect to its manufactured products.

Energoremont  
Sp. z o.o.

Polish company

ENERGOREMONT Sp. z o.o. is a company specialised in manufacturing, modernising and maintaining shell-and-tube heat exchangers commonly used in commercial power plants, paper and chemical industry and sugar industry, as well as all kinds of coolers, turbine condensers, preheaters, evaporators, chemical apparatuses, recycling euqipment and other heat exchange devices. ENERGOREMENT Sp. z o.o. has patented a technology and equipment for fixing tubes in the tube sheets across the sheet thickness using hyraulic method. The company also installs new turbine condensers. The offer may be divided into few groups: power and CHP plant facilities, sugar and food indsutry facilities, cellulose and paper industry facilities, chemical facilities, petrochemical facilities and coking plants. Notable offer for power industry includes: steam turbine condensers, low pressure regenerative heat exchangers for turbine units, high pressure regenerative heat exchangers for steam turbine units, oil coolers, air coolers, hydrogen coolers, vapour coolers, coolers for pseudocondensation of turibne units, coolers for steam vacuum pumps, main heaters for district heating water and steam boiler drums. The offer includes engineering, prefabrication, assembly and installation as well as creating full as-built documentation, running pressure tests and reporting for supervisory services’ acceptance.

Envimac Polska  
Sp. z o.o.

Polish company

ENVIMAC Polska is involved in the development, manufacturing, construction, and servicing of installations and components intended for environmental protection and process engineering. The main scope of operation of ENVIMAC includes development water and flue gas treatment installations and biological treatment technologies of water and flue gases, as well as constructing installations of biological treatment for water and flue gases, water and sewage aeration system, welding of elements from high-alloy steel, low-alloy steel, non-alloy steel and structural steel using MIG, MAG and TIG methods, manufacturing of steam separators. ENVIMAC also provides services in the field of non-destructive testing. The company has a laboratory and equipment to provide testing at the clients location. Most of the components offered by ENVIMAC are manufactured by the company’s own plant. ENVIMAC offers complete installation of its products along with control system dedicated to that installation and startup. Additionally ENVIMAC is a reseller of variety of nozzles produced by the company BETE.

E-Towers Famaba S.A.

foreign company

E-Towers Famaba manufactures medium and large-sized steel structures: wind turbine towers, second-grade steel for offshore wind turbines, welding and machined steel components for harbour gantries and travelling cranes and other steel structures such as: overhead cranes, exhaust stacks, pipes, industrial structures. The company owns a production plant with a manufacturing floor area of 25,257 m² and a modern, well equipped fleet of machines, fully focused on manufacturing and machining steel products. Famaba has a capacity of 17,500 metric tonnes of steel per year. The company also manufactures three-dimensional structures with dimensions up to 4000 x 4000 x 140000 (60000) mm and weights of up to 60 tonnes, using specialised equipment and assembly plates. E-Towers Famaba employs certified staff authorised to perform following tests add inspections: visual tests, magnetic particle tests, ultrasound tests, penetration tests. Highly qualified employees hold all duly required certificates. When developing documentation and new designs, the workshop uses computer software such as Auto CAD 2012 and Autodesk Inventor Professional 2012.

Euronaft Trzebinia  
Sp. z o.o.

Polish company

Euronaft Trzebinia Sp. z o.o. provides mechanical services in the area of facility and equipment construction and overhauls, as well as railway transportation - servicing railway sidings, rail works and rolling stock maintenance. The company is authorised to build and overhaul tanks, pressure components, process and power industry pipelines made of construction and alloy steels (stainless, acid-resistant, heat resistant etc.), overhaul refinery equipment, i. e. heat exchangers, filters, air and water coolers, reactors, columns, industrial furnaces and gas burners, pressure jet cleaning of pieplines, cooling circuits and heat exchangers, overhauls of mixers, fans, blowers, centrifugres, overhauls and maintenance of industrial valves, safety valves, vents, fire safety devices for fuel storage tanks, overhauls and inspections of fire safety systems of facilities (foam, steam, water sprinklers), performing overhauls and maintenance of tank truck and tank railway carriage loading and unloading stations, prefabrication and installation of steel structure, application of anti-corrosion coatings, mechanical works involving metalworing, welding works, mechanical cutting, gas cutting, plasma cutting, tube expanding, metal sheet rolling, bending elbows and regeneration of worn out comopnents; creation of complete registration documents for non-pressure vessels for class I and II flammable liquids (petrol and diesel oil).

Expom S.A.

Polish company

Expom has its own process engineering office and five manufacturing halls with a total area of 6500 m<sup>2</sup> complete with modern machinery fleet. Expom's activity includes: marine offshore business (ship equipment - boat davits and cranes, harbour davits and cranes, sea cranes), power plant business (furnaces and heat exchangers of large furnaces, welded stators of motors and generators, including ones for wind turbines), other businesses (large-sized structures with weights of dozens of metric tonnes, steel structures with electric and hydraulic systems, large machinery components, components of cranes, installation). The company builds low voltage electrical systems (230 V, 400 V, 690 V) for machinery and equipment of own production, as well as entrusted structures, and strong-current electrical systems supplying power to electrical drives, control systems and signalling system. The company operates globally and its products are delivered to Europe, Asia and USA. In terms of engineering, the company offers full 2D documentation for mechanical, electrical, hydraulic and pneumatic disciplines, finite element modelling, 3D modelling in SolidWorks and Creo Elements standards and visualised animations and simulations for designed equipment.

Famet S.A.

Polish company

FAMET S.A. is specialised at designing, manufacturing, delivering and installing process equipment and devices for important industries. The company also manufactures steel parts and components for construction and loading machinery, electrical equipment and wind power plants. The company has broad experience in manufacturing elements for different applications: wind farm components, electrical equipment components, elements for construction and loading machinery, steam turbine condensers, shell-and-tube heat exchangers, low- and high-pressure regenerative preheaters, air-cooled heat exchangers, air preheaters, reactors, column apparatuses, gas filters, finned tubes, specialised machinery and devices, modular installations, installation services. Preferred delivery method of FAMET group involves road transportation. Large part of land deliveries uses standard loading gauges. By adjusting types of used vehicles to the customer requirements and cargo sizes, the company also provides customers with delivery with non-standard dimensioned cargoes. Product transport is performed according to CMR convention. FAMET Group owns a fully equipped river harbour at Oder River, located close to ENRGOMET company in Opole. Ownership of all harbour equipment enables also deliveries by river transport and sea routes.

FAG S.A.

Polish company

FAG S.A. produces valves and offers wide variety of industrial valves and fixtures. Offered equipment is characterised by following operating parameters range: nominal pressure 0.6...50.0 MPa, flow temperature from -196 to +650°C, flow channel diameter DN 4... 400 mm. Scope of company's activity includes: engineering, production of medium-sized batches and of unique equipment, as well as domestic and international distribution of products, i. e. isolation valves, non-return valves and gate valves - straight and angled, with flanges, for welding or threaded - intended for controlling flow of neutral and aggressive liquid and gaseous substances; services concerning active cooperation, other industrial and non-industrial services, according to capabilities resulting from possessed potential. The main process used by the company is machining mainly involving numerically controlled lathes, single- and multi-spindle automatic lathes and processing centre. Other processes carried out by the company include welding and padding in noble gas environment, plastic and thermal processing, spray electrostatic painting and final assembly of ready products.

FA Swarzędz Sp. z o.o.

Polish company

FA Swarzędz Sp. z o.o. is a manufacturer of metal industrial valves and fittings. The offer includes: gearbox synchroniser rings (rings as matrix forgings are made in diameters from 90 to 250 mm), matrix forgings of brass, bronze and steel (weight of up to 3.5 kg - after cutting), valves for gas bottles (such valve is an equipment of a 11 kg and 33 kg liquefied gas bottle - for technical propane-butane, technical butane and technical propane - used in household and forklift fuel systems), bodies of water meters and heat meters, ball cocks and water valves, gas valves with flow safety. The company also offers machining services (CNC lathes, equipped with power tools connected to the C axis, electrical poppet, rods warehouse) and production of forging moulds, matrices, dies, blanking tools, press tools for drilling, machining, grinding equipment, as well as special mountings. The offer also extends to development of construction documentation. All design works are carried out with CAD/DAM software (Autodesk Inventor and Edgecam). In 2009 the company joined FA. TA RICAMBI S. p. A. Group.

Sefako S.A.

Polish company

Sefako S.A. boiler production plant is a Polish boiler manufacturer. Supplied boilers are used in commercial power indsutry, industrial power and heating plants and distributed power and heat generation for food processing facilities. Offered boiler types are fired with pulverised hard coal, liquid or gaseous fuels. The offer also includes boilers designed for biomass combustion. Sefako S.A. also produces pressure equipment for all kinds of boilers. Production is carried out upon own documentation or documentation supplied by the customer. The company offers services such as: creating workshop documentation, manufacturing, pre-assembly at production hall, delivery of components to the construction site, installation of components at site. The production workshop is producing equipment: membrane wall panels, evaporators, superheaters, economisers, pressure vessels, steel structures and ducts. The factory is able to provide turnkey deliveries of boiler plants using bilers of own design. It provides warranty and post-warranty services for delivered boilers. The customers include both Polish and foreign companies, especially from Denmark, Finland, France and Germany. Currently export orders constitute 80% of production.

Avia S.A.

Polish company

The Precision Machine Tools Factory AVIA SA is a Polish manufacturer of high quality machine tools. In Germany, it employs more than 4,000 corporate machines. The current offer is a wide range of vertical machining centers, CNC universal milling machines and conventional and CNC lathes slant bed. The factory is also the manufacturer of ballscrews, which are used in machines and supplies to the world's leading manufacturers of machine tools. Projects for new machines are carried out by its own Research and Development department. In the process design new products we use systems: solid design (CAD-3D), optimize the finite element method, computer-aided manufacturing (CAM). The company's headquarters in Warsaw operates a training center with showroom, which are organized twice a year "Open Days" AVIA. All parts and assemblies, having a decisive influence on the final quality of the machines are made in the factory AVIA in Warsaw. Starting with research and development, by treating the body, the production of spindles and ballscrews, production of cabs, electrical cabinets and housings guides until the final assembly of the machine.

Rafamet S.A.

Polish company

Rafamet is a manufacturer of special machining euqipment for production of rail sets at global market. Rafamet also supplies large-sized specialised machining tools for industrial customers, including machine industry, power industry, shipbuilding, metallurgy, aerospace industry and defence industry. The company has manufactured and osld more than 5300 machining tools for railway engineering and more than 700 other large-sized specialist machining tools. The offer includes products such as: vertical and horizontal lathes, milling planers, drilling-milling machines, special lathes for railway engineering, special machining tools for shipbuilding, castings. The Foundry Complez RAFAMET Sp. z o.o. manufactures cast iron castings of grey cast iron, nodular cast iron and alloy cast iron. It is specialised in unique and small-series products of heavy castings, with a weight exceeding 5000 kg. The maintenance-related offer of the company includes: regeneration of key components of lathes, replacement of mechanical parts, overhauls and upgrades of hydraulic systems, electrical overhauls with upgrades of control systems. The offer also includes updating operation and maintenance manuals of a lathe according to the scope of overhaul and upgrade. Moreover the company provides maintenance services and technical advisory.

FUGOR  
Sp. z o.o.

Polish company

Fugor Sp. z o.o. is a company constructing steel structures, including large-sized ones, and complete equipment for handling and mechanically processing coal, minerals and various loos products. Moreover the company manufactures bridge cranes, gantries and components of lifting devices. The engineering office designs and adapts devices for individual needs. The company has its own hot galvanising plant used to protect the products from environmental impact. The compan is specialised in producing all kinds of conveyors: belt, worm, roller, bucket, steel tray. The company has its own hot galvanisation plant (currenty a bath 2700 x 1000 x 1500 mm, element max weight 400 kg) which allows it to considerably influence quality and aesthetics of products, as well as resistant to ambient conditions. Fugor manufactures following types of products: conveyors, crushers, travelling cranes, tanks, steel structures, guillotines for rubber, railway car shunting device, DISA concentrators, DORRA sludgers, recuperators, three-roller supports, spare parts. Spare parts and maintenance are provided for each of those products.

Fabryka Urządzeń  
Wentylacyjno-Klimatyzacyjnych  
KONWEKTOR Sp. z o.o.

Polish company

The Company manufactures ventilation and heating systems. The company produces: roof fans, roof foundations, explosion-proof fans, integrated launcher roof fans, axial fans, drum, exhaust ventilators, fans lute, radial fans, cooling and heating-ventilation fans fireplace, heaters and heat exchangers, fittings ventilation, elements of ventilation and sets the boot. The company has a rich machines shop with stiff bed CNC lathes, laser cutting sheet metal (sheet sizes up to 2 x 6 m), thermal guillotine cutting. cutting services offer the possibility of cutting of difficult materials: aluminum, copper, brass and galvanized sheets. The machinery also allows bending and rolling sheet metal and jet cleaning of the surface. In addition, the plant has a wide range of equipment for machining surface. The company provides services in the field of hot dip galvanizing that guarantees protection against corrosion for many years, an increase durability and safety. There is a possibility of galvanizing the unusual items that require vibration, for example. Densely finned elements, and openwork mesh or pressing, S.A. closed containers without galvanizing inside.

Fabryka Wentylatorów  
“OWENT” Sp. z o.o.

Polish company

FW OWENT Sp. z o.o. is a production facility supplying fans. The plant produces radial, axial and axial-radial fans for ventilation and air conditioning systems (WWOax and drum type WPOB), for exhaust gas extraction (WPPO, WPOs and WPODs), for pneumatic transport (WTOP), roof fans (WPDO), high pressure fans (WPFO, KAP-1800, WP, WPOs, WPOas, WPOas). Product programme also includes special-finish fans: temperature-resistant (up to 500°C), resistant to aggressive media made of OH18N9T steel etc. and coated with ebonite mixtures (“rubberised”), galvanised, explosion-proof with attestation, explosion-proof with improved leak-tightness (with gasodynamic sealing of the enclosure). Also offered are axial controllers, controlled manually or with servos. Fans are provided with vibration absorbing frames with vibration dampers, silencers and soundproof enclosures. The company offers maintenance for delivered equipment. OWENT regularly cooperates with technical research institutions such as: Institute of Thermal Engineering in Łódź, Poznań University of Technology, AGH University of Science and Technology in Kraków. The company also provides services such as plasma or oxygen cutting of carbon and stainless steel and of aluminium, and dynamic balancing of rotors and other rotating components on stationary machines.

Fawent S.A.

Polish company

The company is specialised at construction of large size industrial fans (centrifugal and axial) intended for commercial power industry, mining, chemical industry, wood processing industry and food industry. The company has become a supplier of industrial fans known in Poland and abroad. Product designs are based on documentation crated by own design office and on licence documents of European companies from Germany or Great Britain. The company has a large fleet of machinery which enables performing considerable share of production of components for own products. Infrastructure in form of interconnected production halls with divisions for machining and assembly, ensures transport of comopnents and ready details between brigades. Assembly stations are served with 10 tonne overhead cranes, except for the tallest assembly hall, which is provided with 20 tonne overhead cranes. The design and process departments use software which enables preparing documentation as required for starting and managing production process. The company also has a tool workshop permitting it to create many non-standard tools and other pieces of euipment. Except for main products, the company offers steel structures and machining services.

Famak S.A.

Polish company

Famak Kluczbork is a manufacturer of transport and lifting equipment operating in Polish market and abroad. The main production sectors involve: steel structures for industry, equipment for drilling platforms, ships and other offshore applications, loading systems, lifting equipment, including overhead cranes and hoists, equipment and systems for mining industry, machinery and equipment for other industries (power plants, ports and others). Machinery and equipment manufactured by Famak are exported, finding customers in countries including Austria, Bulgaria, China, Ghana, Indonesia, Iran, Morocco, India, Romania, Norway, Russia. FAMUR FAMAK S.A. has a well equipped workshop. It is calable of manufacturing advanced equipment. Specialisation areas include: lifting equipment (bridge cranes, gantries, cranes, shipyard and port cranes), loading equipment (gate loaders, stackers, railway car tipplers), offshore equipment and structures. The production plant, except for typical manufacturing departments, also consists of hydraulic plant, electrical plants, sanding workshop, paint shop and large assembly yard. The total production area is some 30,000 m2. Production capacity reaches 800 tonnes per month and up to 10,000 tonnes per year.

Famur S.A.

Polish company

FAMUR S.A. manufactures equipment and machinery used in underground mining. It produces mechanised longwall systems equipped with control and monitoring systems for machinery, processes and technical systems complete with IT support. Machinery is designed to operate in particularly difficult mining-geological conditions. FAMUR's operations also include production and deliveries of machinery and devices for continuous horizontal transport and handling loose materials, production of heading machines and comprehensive services involving engineering, construction and installation of headframes and coal processing plants equipped with the state-of-the-art process lines. Mechanised longwall systems are complete mining systems designed for underground mining of coal deposits with a thickness of 1 to 6 m. The Research and Development Centre uses information technologies and merges them into one system with mining equipment. The company is collaborating with Polish technical universities and mining instutitions. The Famur Group consists of seventeen smaller companies. FAMUR S.A. 's service centre operates 24 hours per day, 7 days per week.

Finow Polska Sp. z o.o.

Polish company

Finow Polska Sp. z o.o. has been operating since 2000. Currently the company owns its own manufacturing workshop in Ostrowiec Świętokrzyski. The scope of company's activities includes: comprehensive services for power plants, chemical plants and other industrial facilities, engineering and analyses for poewr indsutry, pipelines for power industry and other industries, specialised structures and equipment for power plants (diverters, components of flue gas desulphurisation plants, diffusers, diverter flaps, louvres, gate valves), vessels, steel structures and installation services. Finow Polska has a specialised staff for welding supervision with professional experience from different industries, from light welded structures, to hall structures, bridges, components of construction machinery, heavy steel structures, high pressure pipelines, components of turbines and many others. Entire production activity is performed at shop. This is enabled by a large set of machinery, including: welding equipment, drilling-milling machines, boring machines, lathes, cutting machines, horizontal and vertical rollers, bending machines, hydraulic presses with pressures of up to 80 metric tonnes, CNC plasma cutting equipment, set of overhead cranes with a lifting capacity of up to 20 metric tonnes. The main shareholder of the company is Elektromontaż Północ Bełchatów.

Foster Wheeler Energy FAKOP Sp. z o.o.

foreign company

Foster Wheeler Energia Polska Sp. z o.o. operates since early 1990s as a part of the international Foster Wheeler Ltd. corporation. Within the FW corporate organisation, the Polish company is an independent organisational unit, part of the Foster Wheeler Power Grou Europe. Foster Wheeler Energia Polska offers deliveries of boiler facilities for the Polish market as well as markets of Central and Eastern Europe, and Turkey. The company is a majority shareholder of the factory of pressure part of power boilers Foster Wheeler Energia Fakop Sp. z o.o. located in Sosnowiec. Foster Wheeler Energia Polska is a company supplying modern and environment-friendly technologies for coal combustion and utilisation of biomass and refuse derived fuels. The offer includes: designing, deliveries and turnkey construction of: circulation fluidised bed (CFB) boilers operating at subcritical and supercritical parameters, pulverised bed boilers operating at subcritical or supercritical parameters, boilers and gasifiers for biomass and RDF, heat reocvery steam generators and waste heat boilers for combined cycle power units, boiler up-grades, furnace systems and coal pulverisers, low emission combustion systems, post-warranty and warranty service and spare parts, technical advisory and equipment diagnostics.

Fugo S.A.

Polish company

The company Fugo Ltd. is a manufacturer of machines, spare parts and steel structures. It provides products and services to the mining, machinery, metallurgy, shipbuilding, energy, construction, cement - lime, pulp - and paper and other industries. The company's business includes: manufacturing (machinery for mining, quarrying and construction, lifting and handling equipment, wheels and gears, metal structures and parts, bearings, gears, gearing and driving elements), repair and maintenance of machines, production other tanks, reservoirs and containers of metal, metal processing and coating of metals, mechanical engineering, repair and maintenance of fabricated metal products, installation of industrial machinery and equipment, engineering activities and related technical consultancy, other research and technical analysis, operations Fugo Ltd. It is based on individual domestic and international customer orders. The scope of services includes the design of processes and products, preparation of design documentation, production, repair, modernization, assembly and installation.

Gafako Sp. z o.o.

Polish company

Gafako Sp. z o.o. was established in 2003 in Gdańsk. Since 2009 it has been conducting its operations in Gdynia. It owns a quay “Nabrzeże Pochylniowe”, which is 152 m long and enables loading large-sized cargo for marine transportation. Production halls with a total area of 13,000 m2 offer conditions for delivering wide variety of orders, including mechanical and hydraulic assembly. Gafako offers: production and machining of steel structures for offshore and onshore applications, stress relief annealing of steel structures, metal sheet bending, services of gas and plasma cutting of sheet metal, mechanical and hydraulic assembly operations for equipment and factory acceptance tests. The company manufactures steel structure under supervision of classification societies: DNF, GL, LR, ABS, BV, RINA. Gafako is assembling steel structures using welding methods: 111, 121, 135, 136 and 138 as per ISO 15608, using materials of groups 1, 2, 3, 5, 8 with thickness from 3 to 360 mm. The company employs welders and operators with welding certificates.

Remontowa S.A.

Polish company

The company is a part of Remontowa Holding. Currently it operaes in Polish and European shipbuilding. Except for experience in overhauling and modernising sea vessels, the company may utilise its potential to build elements and structures of steel and cranes. The company's strengths include favourable location and own workspace which reduces costs of manufacturing oeperations and transport. Remontowa S.A. is a shipyard with the largest share in the Polish market and is considered to be one of the largest contractors in Europe and world in some sectors of overhaul activities. Every year some 160-200 ships are being overhauled by Remontowa S.A. The comapny offers a full scope of hull works and euqipment (thanks to combining highly qualified personnel and wide range of workshops), as well as minor modifications, repairs, modernisations and conversions. Shipyard's achievements include wide range of steel structures delivered for both vessels and land structures - for example floating docks, barges and floating platforms which are operated as a part of loading equipment in a loading facility of Airbus aircraft production facility.

GEA Technika Ciepna Sp. z o.o.

Polish company

Since the beginning of its existence, the company was engaged in designing and manufacturing high-performance heat exchangers based on elliptical finned tubes hot-dip galvanized. It is the only manufacturer of these products in Poland. Their offer includes the following products: high-performance heat exchangers, air coolers, economizers / heat recovery units, plate heat exchangers (divided into three groups: gasketed, fully welded and brazed), shell and tube heat exchangers. The plant has a production area consisting of production facilities covered a total area of 14 400 square meters, including 4 000 m² specially prepared and fully salaried hall, dedicated solely to the production of alloy steel heat exchangers. The company also has a good location logistics at the distance of 500m from the port and the railway station, three airports within a radius of 100 km and access to the motorway and highways. This gives a production capacity of heat exchangers and other steel products: approx. 5 000 pcs. / Year. The quality of products is based on years of experience and scientific and research potential companies within the GEA Group.

GH INTERTECH  
Sp. z o.o.

foreign company

GH SA operates in the crane industry for over 50 years. GH SA Manu-  
factures cranes, hoists, and other lifting equipment. It has representa-  
tive offices in 40 countries around the world, including Poland. Thanks  
to their factory GH Intertech in Kłobuck located near Częstochowa,  
in 2010, it expanded its markets to Russia, Ukraine, Czech Repub-  
lic, Slovakia, Slovenia and Hungary and continues to develop in new  
countries of Eastern Europe. The products are designed for a variety  
of industries, including power plants, steel mills, shipyards, sewage  
treatment plants, wind power plants, aviation, automotive and pro-  
cessing of waste. In Poland GH Intertech Sp. manufactures gantries in  
halls with a total area of 8.000m2. For the production of cranes using  
a specialized production line of self-propelled welding machines. Pre-  
liminary crane assembly takes place on a special leveled space. Each  
of the produced gantries is examined by X-ray. The company offer  
cranes (overhead cranes: single girder mobile cranes, double-girder,  
suspended, gantry and half gate and specialized cranes), hoists and  
winches, cranes, accessories and spare parts.

GOP BETA Sp. z o.o.

Polish company

Grupa Obsługi Przemysłu BETA Sp. z o.o. operates mainly in the  
area of power plants. The company focuses on carrying out work  
in the following industry branches: mechanical, general construc-  
tion and insulation. In the mechanical industry in the context of  
repairs of power boilers implement a comprehensive execution  
of works including repairs and replacements pressurized parts. In  
terms of thermal insulation solutions that require sheet metal jobs  
are proposed. Services in the field of isolation starts with the engi-  
neering project development and afterwards the works have been  
completed providing a thermal imaging research report. For three  
years, the company also undertakes the supply and installation of  
concrete lining of boilers. Construction works are mainly execution  
of foundations in industrial construction and in the construction of  
roads and storage yards of concrete pavement construction. Within  
energy branch the group provides additional services: technical  
insulation performance heat- and cold insulation, acoustic insula-  
tion, supply and installation of network and district heating systems,  
installation of process heat to build flue gas desulphurisation system,  
carries out repairs of electro different types, including ELWO and  
BEALCKE DURR. He also conducts wholesale of steel.

Grupa Powen  
-Wafapomp SA

Polish company

Grupa Powen-Wafapomp SA is the biggest industrial pumps manu-  
facturer in Poland, a modern company with over 100 years of ex-  
perience. Based on its expertise the company offers equipment for  
power, mining, petrochemical, food processing industries and for water  
supply installations including pumps tailor made for individual user's re-  
quirements. Due to its know-how Grupa Powen-Wafapomp SA offers  
modernizations and refurbishments of pumping infrastructure as well  
as turn-key projects improving the energy efficiency and cost optimiza-  
tion of pumping systems. The company's product range includes steel  
structures, fans and sieves manufactured by sister companies from  
Powen capital group, which enables to meet the requirements of many  
industries to the full extend. The company employs a team of over 40  
designers using cutting-edge engineering software including numerical  
stress analysis (MES) and computational fluid dynamic (CFD) codes.  
The design team cooperates with leading Polish science centers.  
The company owns two production sites located in Zabrze (Silesia  
region) and in Warsaw equipped with modern numerical machining  
centers and pump testing stands.

H. Cegielski  
FSA Sp. z o.o.

foreign company

The company manufactures reciprocating engine-generator units,  
and carries out manufacturing, deliveries and maintenance of con-  
tainerised power plants - compact standaolne electricity sources,  
which cosists of a four-stroke diesel or spark-ignited reciprocating  
engine, engine-driven generator and all auxiliaries needed for in-  
dependent operaiton: control systems, control panel, cooling water  
systems and lubricating oil system, fuel treatment and supply system  
and other auxiliary components. Additionally the factory provides  
anufacturing services for universal and specialised production ma-  
chinery, specialised mechanical processing of crankshafts, overhauls  
thereof, wheeling, grinding, milling, drilling, building steel structures  
(MMA, MAG, MIG and TIG welding, gas welding and soldering),  
cutting carbon steel sheets with acetylene burner, production of  
steel pipes. The offer also includes a wide range of spare parts for  
diesel engines. Spare parts are manufacutred using identical design  
requirements and technologies as parts used in basic production.  
FSA engines are used as drives in stationary powerplants (in build-  
ings or containers), as local power sources, drives in pumping and  
compressor stations and for other industrial applications.

HCP S.A.

Polish company

H. Cegielski-Poznań S.A. (abbreviated as HCP) is a supplier of large diesel engines (from 3. 5 MW to 200. 0 MW) and power plants based on thsoe engines. The company's offer includes power generation equipment using variety of fuels, from fossils including all oil frac-tions or natural gas to renewables like biomass or various wastes. The company has a possibility of performing thermal and thermochemical treatment, including stress relief annealing, of both small and large structures with lengths exceeding 13 m. Available equipment permits performing wide range of machining processes: turning, milling, boring, honing, grinding of small parts and whole structures or castings with a weight of up to 150 metric tonnes. The HCP S.A. 's education centre organises trainings for welders involving sheet and pipe weld-ing with fillet welds, welding of sheets with but joints, pipe butt weld-ing using following processes - coated electrodes E (111), MIG, MAG (131, 135, 136), TIG (141), shielded arc welding ŁK (121).

H2Optim Sp z o.o. Sp.

Polish company

H2Optim is a specialised company which deliveres water treatment stations for industrial applications. Main scope of activities includes membrane, reverse osmosis, ultrafiltration and electrodeionisation systems, as well as iron removal, softening and disinfection of water with UV lamps. The water treatment euqipment is operated in fully automated way. Automation of equipment is adapted to customer requirements, as well as to existing control systems. H2Optim also offers a wide range of water filters used in domestic and industrial applications: FP series for maximum flow of 7 m3/h; FO series for maximu flow of 12 m3/h, BIG series for maximum flow of 13 m3/h, EKO CLEAN and TOP CLEAN for maximum flow of 10 m3/h. In-dustrial and common waer filters, depending on liquid quality may utilise: mechanical cartridges catching coarse contaminants, i. e. sediments, sand, rust and others, made of polypropylene, which ensures resistance to chemicals; carbon cartridges, which improve water colour and transparency; sediment-carbon cartrdiges provid-ing double mechanical and chemical filtration; universal softening, carbon, demineralising, poliphosphate and iron removal filters.

Instal Rzeszów  
Sp. z o.o.

Polish company

The mission of Instal Rzeszów is creating installations at newly built industrial and municipal facilities. The company also carries out manufacturing of own products. The core activity of the company involves manufacturing of steel process equipmetn for storage of loose materials, liquids and gases, at overpressure, underpressure or ambient pressure. Provided quipment is used for process plants and systems in all areas of economy, e. g. chemical and petrochemical (refinery) industry, gas systems, poer engineering, metallurgy, food industry, medical business and construction industry. Instal Rzeszów also builds advanced steel structures. The company participates in building many new facilities, supplying a wide range of specialised process equipment. Manufacturing of own products of the company is carried out at a production plant located in Rzeszów, at Reja Street 9. The production facility employes a highly qualified personnel with welding certificates, who use following welding technologies: arc welding with shielded electrodes (111), arc welding in gas environ-ment using MIG (131) and TIG (141) methods, fluxed-cored gas welding in active gas environment (136), submerged arc welding (121) using equipment of Swedish company ESAB 1400A. The production hall has an area of 8540 m2 and wide range of machinery.

Kapeo Polska Sp. z o.o.

Polish company

KAPEO Polska is a manufacturer of steel ground tanks for storage of liquid substances. The company supplies high-quality fire fighting equipment. KAPEO Polska designs, manufactures, delivers and installs complete large-sized cylindrical steel tanks for storing fire fighting water. Fire water tanks are used e. g. as a source of water for fixed fire fighting equipment, networks and systems, and for external fire fighting operations. KAPEO Polska is an exclusive representative of GALGLASS, authorised manufacturer of bolted FM APPROVED tanks. KAPEO on customers request offers engineering, delivery and installation of tanks made to standards such as:

1. EN 12845 Fixed firefighting systems. Automatic sprinkler systems. Design, installation and maintenance.
2. VdS-CEA 4001 Sprinkleranlagen. Planung und Einbau.
3. LPS 1254
4. NFPA 22 Water Tanks for Private Fire Protection
5. FM Data Sheets 3-2 Water Tanks For Fire Protection

Kopex S.A.

Polish company

Kopex S.A. offers solutions for underground and open strip mining. It manufactures machinery, equipment and technologies for mining industry. Delivery capabilities involve all stages of an investment process in mining industry: project's feasibility study, supervision over geological research of a mining area with calculation of deposits, development of deposit access method, design of production plants, manufacturing, delivery and installation of process equipment and systems, starting, extension, upgrades and management of production, as well as mine decommissioning, training of investor's personnel and engineering support during project construction phase. The offer includes also electrical equipment, as well as mining control and automation systems. The company was founded as a state owned Enterprise for Construction of Mining Facilities Abroad KOPEX with registered office in Katowice on 4 November 1961. Kopex company is a part of the Kopex Group. The Group is an EPC contractor for investment projects in mining industry of coal, lignite and non-ferrous metals, which offers full management of the project. Capabilities of Kopex group include engineering, manufacturing, delivery and installation of machinery and of complete process systems, as well as maintenance activities and trainings.

ŁFM Celpa S.A.

Polish company

Łambinowicka Fabryka Maszyn Celpa company possesses all technological equipment required for machining of metal components (lathes, grinders, milling machines, shapers), construction and welding of steel structure elements and application of protection coatings. Łambownicka Fabryka Maszyn Celpa owns 10 gantry cranes of 5-20 MG of load used to construct complex and largely varied in size and weight devices and machines for the industry. The offer includes filtering devices for the energy industry (desulfurizers, dust collectors, filters, electrofilters, cyclones) as well as water treatment devices (gravel filters, heat exchangers, ion exchangers, water descaling devices, water containers) and appliances for wood industry (drying stations, swarf sorting and gluing stations, mechanical transportation lines). The company also produces machines for food and chemical plants (containers, condensers, preheaters, chillers, mixers) and paper industry. The plant is also capable of constructing water turbines, cases for industrial boilers, stacks, and pipework.

Mekro Sp. z o.o.

Polish company

Mekro Sp. z o.o. manufactures steel structures and tanks along with auxiliaries and performs installation and overhauls of machinery and equipment. The company has a production hall with a surface exceeding 4000 m². It mainly serves cellulose-paper industry, petrochemical sector, power industry and similar businesses; operates in Poland and other European Union countries. The company employs 194 own personnel and approximately 30 persons of subcontractors. In the context of “black” steel deliveries it mainly collaborates with suppliers of products form Polish steel mills. Considerable part of productoin is made of acid-resistant steels, imported mainly from Finland and Sweden. Mekro performs following processes: structure grinding, structure painting, recess burning and welding. Mekro provides manufacturing of pressurised and non-pressurised tanks (cylindrical and conical) made of acid-resistant steel, steel structures for construction and other industries, installation and uninstallation of machinery and equipment, EPC construction. The company also offers heat exchangers and process equipment.

METALKO Sp. z o.o.

Polish company

The company is a manufacturer of heat exchangers and other devices and equipment. The scope of work includes: the production and maintenance of produced chemical process equipment, petrochemical and other; gumming of apparatus made of austenitic stainless steel; production of equipment and piping systems made of plastic; services related to anti-corrosion work; maintenance and service of compressors, pumps and other equipment with rotating parts; realization of investments as a General Contractor. The Department of Mechanical Equipment is engaged in production of fixed and mobile pressure vessels, storage tanks for liquids and hazardous materials, various types of heat exchangers, column equipment, reactors and mixers, filters, conveyor belts and all kinds of welded structures. The Anti-corrosion Department offers a wide range of corrosion protection solutions for steel and other components exposed to corrosion depending on the location and method used, the type of floor covering and the technology used of anti-corrosion protection. The Department of Vortex Machinery handles customer service, repair and maintenance of equipment and machinery for the chemical, petrochemical, pharmaceutical, food, painting and related industries.

Morska Stocznia Remontowa Gryfia S.A.

Polish company

Morska Stocznia Remontowa Gryfia S.A. has been created through a merger of two West-Pomeranian plants; since September 2013 they have been operating as a single company. The shipyard owns to production facilities:in Szczecin and Świnoujście. The shipyard offers overhauls, conversions and construction of new vessels. It performs unscheduled emergency repairs, and class inspections of vessels. MSR Gryfia S.A. is also a manufacturer of steel offshore structures. Gryfia owns technical facilities which enable comprehensive overhauls and conversions of both large merchant vessels and passenger ferries, as well as specialist vessels of various applications. MSR Gryfia has totally eight floating docks in Szczecin and Świnoujście, including one of the largest and newest in Poland, the No. 5 dock with a capacity of 17,000 tonnes, which permits docking ships up to 40,000 DWT. Besides, overhauls of smaller ships may be performed on three lifting pontoons. The shipyard owns quays with a total length exceeding 2500 m, equipped with variety of cranes and transport infrastructure.

Mostostal - Energomontaż  
Gliwice S.A.  
Polish company

Mostostal-Energomontaż Gliwice S.A. offers production of steel structures and finished metal products. The company has created a department in Żmigród nera Wrocław, which extended its production footprint beyond borders of Śląskie Voivodeship. The company mainly delivers products to the Polish market, although some products are also delivered to other EU countris. Manufactured equipment is also delivered to final customers on Chinese, American and African markets. The production offer of Mostostal-Energomontaż Gliwice S.A. includes: industrial structures and euqipment (electrostatic precipitators, coal powder improvement equipment, vessels, process pipelines, Dorr agitators, crusher plants, drawing shaft superstructures, truck routes, dumpers, closing elements of retention reservoirs, slides, chutes, equipment for mining water desalination, compressed air headers, equipment for headframes, belt filtration presses, stacks, relay masts, lighting towers), bridge structures (railway bridges, road bridges, flyovers, communication platforms, footbridges, bridge components), steel structure buildings (production and storage halls, sporting halls, public buildings, shopping malls and halls) environment protection equipment and systems (exhaust gas dedusting and desulphurisation, suction systems, sewage treatment equipment, biogas tanks).

Mostostal Konin  
Sp. z o.o.  
Polish company

Mostostal-Konin Ltd. is a company specializing in comprehensive services in steel structure manufacturing, assembly, repair and modernization of surface mining, construction for the energy industry, the steel and shipbuilding, as well as in the construction of bridges, factories, warehouses, supermarkets, etc. Company is activity focusing on: the production and service workshop in the field of steel structures - fabrication and assembly with corrosion protection, repairs and modernization of equipment and industrial installations. The company operated in surface mining industries, energy, industrial construction, civil engineering and the steel and non-ferrous metals. The company Mostostal - Konin has qualified supervision staff and crew that carries out decommissioning of the superstructures and devices from shops such as drives the main market of excavators, primary turning drives for excavators and conveyors and support elements which weigh on average between 1800 - 2200 tons. The abovementioned work has its own technology and machinery which includes: cranes, welding stations, painting stations, machine tools, burners, band saws, cranes, cutters and lathes, drilling machines and painting units.

Mostostal  
Pomorze S.A.  
Polish company

Mostostal Pomorze S.A. commenced operations in 1999, after being separated from organisational structures of Mostostal Gdańsk. In 2008 the company joined the capital group PolAqua Sp. z o.o. Mostostal Pomorze is a company which builds large size steel and aluminium structures in Polish and foreign markets. The projects are mainly delivered to offshore industry (mainly Scandinavian market), shipbuilding, oil refineries, construction and infrastructure projects. The company also builds specialised structures and cranes. Production and processing capacity of the plant enable constructing structures from scratch or upgrading or overhauling submitted design. The company focuses on cooperation with companies to which it has been related from the beginning of its operations (now offer with changed names), at the same time increasing its involvement on broadly understood market of offshore engineering (e. g. wind platform components for Bladt Industries AS). Moreover, Mostostal Pomorze builds machinery structures which require specialised machining (e. g. components of machinery for SANDVIK Mining Contruction Materials Handling GmbH & Co KG) and RTG crane structures for handling containers in all kind of container terminals.

Multiserwis Sp. z o.o.  
foreign company

The Multiserwis company started its operations in Poland and specializes in technical insulation for power, chemical, fuel, cement - lime, food and construction industries. In Poland, it currently operates two branches. In the central workshop they manufacture concrete products and components for industrial insulation including but not limited prefabricated tin, aluminum, zinc, aluminum zinc, acid-resistant, coated for outer insulating surfaces of supporting structures (strips and rails for insulating flat surfaces and channels, construction for insulation of tanks and pipes and specialized support structures), insulation (for insulation turbines, valves platforms, valves for ships and installations of transmission). In addition to the main facility, the company also has a subsidiary branch Plettac Rusztowania, involved in supplying scaffolding. Thanks to the possibilities of production prefabricants for both for own needs and third-party customers, the company also provides services in the field of insulation and heating electric industrial installations such as pipelines, tanks, hoppers electrostatic precipitators, tanks, arms Pouring, driveways, industrial scales, boilers, incinerators, incineration of biomass, desulphurisation and De NOx, electrostatic precipitators, turbines.

NAAR Technik  
Polska sp. z o.o. sp.k.

Polish company

NAAR Technik offers solutions for industrial dedusting, pneumatic transport of scraps and production waste, central vacuum cleaning and ventilation systems. The company offers comprehensive deliveries for industry: from conceptual studies to engineering to manufacturing, commissioning and personnel training at investor's site. All offered systems are covered by warranty and post-warranty service. The offer includes pneumatic transport systems with comprehensive solutions for pneumatic material recovery from below knives, blanking tools, dies, milling machines, funnels, suction nozzles, as well as air filtratio for production plants and warehouses, and mechanical installation for industry, specialised industrial vacuum cleaners as drivable equipent or complete central cleaning systems. Equipment is intended for all industries, especially pharmaceutical, chemical, petrochemical, food industry, breweries, clean rooms and power industry, metal industry construction industry and many others. NAAR Technik is a Polish distributor of consumables and spare parts of Donaldson equipment. The company also offers consumables for de-dusting equipment and air handling units of other manufacturers.

Patentus S.A

Polish company

Patentus S.A. is a supplier of machines and devices for mining. They specialize manufacturing and installation of highly efficient transportation system use in mines, designed to operate in difficult conditions. The group also possesses wide possibilities of manufacturing non-standard and complex steel structures such as components for oil platforms, structural elements for offshore projects, hot air and flue gas pipework, pressure tanks and more. Patentus S.A. provides services in the fields of production of specialized devices for mining purposes using solutions developed by the company itself, manufacturing non-standard sized structural components, manufacturing transportation systems for industry, manufacturing and renovation of gears and gearboxes, machines and devices for mining applications, machining (accomplished through a wide variety of lathes, grinders etc.), heat treating, selling steel, foundry products and welding tools and materials. Patentus invests in innovative solutions for industrial applications including mechatronic approach designing high power drives for conveyors, gearboxes with dedicated diagnostics systems, high durability gears, vacuum carburization of steel in nitrogen atmosphere. The company has its own research and development department and a construction department.

Pawar Sp. z o.o.

Polish company

The company produces and repairs of pressure tanks, heat exchangers (radiators, heaters), gas filtration systems industry, including sieves filter on the intake water, steel structures, elements of technological systems, expansion joints, dampers feedback and the production and regeneration of spare parts for pumps for many industries. Making welded joints in piping, sheet metal and steel profiles, polidiffusive and butt fitting and welding of polyethylene and polypropylene pipes. Machines park for machining (CNC machining center, lathes, milling machines, drills and bandsaws) ensures the manufacturing of details with high accuracy in a reproducible manner. Cooperation with BELZONA POLYMERIC Ltd as a service-partner in carrying out chemical resistant protective coatings and repair appliances based on binary composites based on polyester resins. Authorized contractor protective coatings based on polyethylene copolymer EverTuff-Eutectic Castolin production. Cast-iron repair by welding and with “sewing”. The company is also implementing technologies for corrosion protection coatings, composites and chemically resistant and polyethylene. All coatings are subjected to control with low voltage leakage detectors.

POM EKO Sp. z o.o.

Polish company

POM-EKO Sp. z o.o. is a company offering metal products. Eko-Invest distributes products manufactured by POM-EKO as well as cooperating metal industry entities. The company manufactures: metal containers from 300 litres to 50 m³, high-volume and tonnage trailers, car superstructures, belt conveyors, metal structures. It also offers a number of services, including machining, cutting, bending and welding of metals, and vehicle inspections. The company employs around 200 persons. It is specialised in manufacturing “Big Round” containers without corrugation. The production output is largery exported to Western-European countries, such as: the Netherlands, Denmark, Germany, Norway, Sweden and France. POM-EKO belongs to the EKO-INVEST POM EKO Sp. z o.o. Capital Group. It also provides services such as laser metal sheet cutting, bending on hydraulic presses up to 8 m, gas-plasma cutting, metal sheet cutting, numerically-controlled machining, steel surface treatment - grinding, specialised welding. The company also owns a regional vehicle inspection station.

Ponar Silesia S.A.

Polish company

PONAR Silesia S.A. designs and supplies advanced hydraulic and oil lubrication systems, integrated on Customer's request with automatics, providing support during the assembly and start-up. Hydraulic installations for different mounting methods (welding, tube forming, upsetting or cutting ring). Our own design and engineering department, logistics, production and servicing facilities allow us to provide a full range of services to the Customers from all industries. An integral part of our offer is the export of hydraulic systems and our assembly services. PONAR Wadowice S.A. is a comprehensive and flexible partner specialized in design, manufacturing and repairs of power hydraulic elements. Many years of experience and the availability of single elements, components and complete systems, allow us to be permanently present in all branches of industry. Production and distribution of oil hydraulic elements: directional control and directional control seated valves, check valves, pressure valves, flow control valves, proportionally controlled elements, intrinsically safe valves, mobile and cartridge hydraulics, cylinders, hydraulic accumulators, pressure switches, filters and coolers, hydraulic fittings – connectors, pipes, flexible hoses, mini-mess. Services: on-site design, manufacture and assembly of hydraulic drives and control systems, selection and supply of hydraulic components and assemblies, repairs and upgrades of hydraulic systems and machinery, repairs and regeneration of hydraulic elements and systems, consultation and technical advice, reliable and professional technical service, operation and maintenance training on the supplied products.

PZT S.A.

Polish company

Portowy Zakład Techniczny S.A. focuses its activity on three main branches of provided services: comprehensive construction of large steel structures (like cranes and gantries), repairs and overhauls of loading and unloading equipment and transport equipment and comprehensive construction and installation of port infrastructure. The company has been expanding its offer since the very beginning of its activity. The most important virtues of Portowy Zakład Techniczny S.A. are immediate vicinity of a harbor and a highly qualified and seasoned staff. As a supplement to the company's offer Portowy Zakład Techniczny provides loading and unloading services for ships and dinghies along with mounting required equipment on ships and dinghies. In conjunction with installing equipment and structures on ships the company offers also its services of production of steel structures and elements for naval units (stairs, walkways, equipment housing and cases), as well as reselling mechanical and electrical components (transport carts, winches). In construction business the company offers also laying down roads and rails, overhauls for concrete and reinforced concrete structures, building thermal insulations, roofings – sealings, insulations and mechanical ventilation systems along with prefabrication of ventilation pipework and structural profiles.

Protea Sp. z o.o.

Polish company

The Protea Ltd. company is highly experienced in instrument resistant to marine conditions. It produces crane systems for offshore and on-shore applications. Produced systems include gantries, cranes, hoists, elevators, as well as containers of liquids and solids, trolleys, pneumatic and electrical switching applications offshore. Production takes place in a plant with an area of 2000 m2 in Kluczbork, which employs more than 140 people. The plant has a production capacity of 1000 tons of steel per year. The company has a representative office in Norway and the UK and sales agents in Venezuela, the United States, Brazil, Singapore, South Korea and China. Protea works with GMC Limited provide services in the project pipe-laying on the seabed, using the barge GMC “Pride” built and equipped by both partners. The company also provides services: hiring of a Terex Demag AC100 crane with an operator, renting hydraulic power units type HPU-01, burning of unfired elements using a two-burner CNC burner Jantar 2 from Eckert and machinable drilling and milling-boring CNC WHN13.

Przedsiębiorstwo Agat S.A.

Polish company

Agat S.A. of Koluszki started its operations in 1990. It offers services for many sectors of the Polish economy, especially oil & gas sector, military, railway engineering and municipal services. In most large projects it acts as EPC contractor. Particularly important in company’s offering are electrical power engineering and process automation solutions used in oil industry, including automation of storage yards, transmission pipelines and pipeline pumping stations, water intakes and treatment stations, moniroing of soli contamination, as well as treatment plants for municipal and industrial sewage. Main areas of services: engineering, construction, power industry (mainly electrical side), process automation, telecommunication, environment technologies (sewage treatment plants) and horizontal controlled horizontal bed boring (distances up to 1200 m). The company employs qualified engineering and technical personnel, who hold all duly required certificates and permits concerning civil engineering, supervision and measurements, and electrical permits clearing them for work at all voltage levels encountered in the power industry. The company also has its own design office, measurement and commissioning sections, as well as necessary technical equipment and instrumentation, and transport fleet.

Energotherm Sp. z o.o.

Polish company

The company PBiAE Energotherm Ltd. provides services for power plants, CHP and heat plants and various industries, heat and municipal services branches. The main direction of the company PBiAE ENER-GOTHERM services commissioning work and measurement - testing of thermal-energy using advanced information technology, analysis and evaluation of their work including the setting of directions of modernization and optimization of power equipment (steam and water boilers, steam turbines, auxiliary equipment etc.), taking into account technical conditions. Energotherm also conducts technical training thematically related to the wider production and processing of electricity and heat with the possibility of obtaining professional qualifications. Energot-herm offers a work boot, measuring, consulting and training company for the thermal-energy economy, fuel economy, media economy: water, steam, air, exhaust fumes and other environmental protection, air conditioning, ventilation, size of the physico-chemical measurements. Clients are mainly power plants, CHP and heat plants and industrial power plants. Also performs services for many other industries in the work of thermal-energy and environmental protection.

Przedsiębiorstwo Budowy Pieców Przemysłowych Piec Bud Wroclaw Sp. z o.o.

Polish company

Przedsiębiorstwo Budowy Pieców Przemysłowych Piec Bud Wroclaw Spółka z ograniczoną odpowiedzialnością is a manufacturer of industrial furnaces, stacks, steel structures and technical installations. The company offers industrial furnaces for non-iron metals (converters, anode furnaces, cathode furnaces, shaft furnaces, Blister furnaces, rotary furnaces), construction material processing furnaces (rotary pipe furnaces, shaft furnaces, tunnel furnaces and dryers, heat exchangers, electrostatic filters), chemistry industry furnaces (rotary, hardening furnaces, absorption towers, tanks). Moreover the company provides fireproof materials (fireproof concrete, plastic thermal insulators), fireproof joints materials, fireproof linings based on silicon, magnesium, aluminum, lithium, ceramic materials (bricks, tiles and profiles) and concrete. The Przedsiębiorstwo Budowy Pieców Przemysłowych Piec Bud Wroclaw also produces stacks and silos (high pressure, thin-walled reinforced concrete stacks, steel stacks, brick stacks). Przedsiębiorstwo Budowy Pieców Przemysłowych Piec Bud Wroclaw has almost 65 years of experience and it employs over 2500 engineers.

Remak S.A.

Polish company

The core business area of Remak S.A. involves mechanical erection, overhaul and modernization services of steam and hot water boilers, energy conversion equipment, flue gas desulphurisation plants, electrostatic precipitator and other industrial systems and pipelines. The company uses multiple original and advanced technologies of installation and boiler overhauls. As one of the few entities it has mastered a technology of hydraulic installation of the pressure part of supercritical boilers. Moreover it performs specialised welding works, radiography tests, and develops technologies of overhaul operations. The staff consists of persons with thorough knowledge obtained at multiple construction sites in Poland and abroad. An important group of personnel are welders with high qualifications. The company performs all services within overhaul, upgrade and installation projects at power plant facilities such as hot water and steam boilers, pressure and atmospheric vessels, steam pipelines, overhauls of pressure equipment. The company owns a modern IT management support infrastructure MRPII/ERP. It widely uses CAD/CAM systems. The company has its own welder training facility and a quality control laboratory, as well as a laboratory of destructive testing, which tests structural mechanical strength through bending tests, tensile strength tests, impact resistance tests, hardness tests, steeloscopy as well as metalography - macro and microscopic.

Airpol Sp. z o.o.

Polish company

The Airpol Compressors Manufacturing Company Ltd. is a Polish manufacturer of screw compressors oriented to the market of comprehensive and specialized services associated with compressed air. It offers services ranging from design to implementation “ready to go” compressor installations. Today, the company employs an experienced team of engineers and technicians are ready to meet the demands of the modern market. It manufactures rotary screw compressors, oil and oil-free scroll compressors, reciprocating compressors of air and other gases, blower systems compressed air treatment (filters, dehumidifiers, dehydrators etc.), compressed-air systems, air tanks vertical made of low-alloy steel with increased strength and improved corrosion resistance of stainless steel, powder-coated or galvanized as well as individual solutions. Airpol runs regular services maintenance of compressors. The company also carries out container stations compressor compressed air or nitrogen to allow high mobility. The size of the container depends on the type and number of installed inside the equipment. Structure of containers with equipment installed is placed on a common frame, which allows easy transport and installation in any selected location.

PPHU Promus Ruda Śląska Sp. z o.o.

Polish company

The manufacturing facility Promus Ruda Slaska Ltd. produces steel structures for buildings, for general construction, industrial halls, warehouses, commercial buildings, and bridges and structures. The company's machinery located in the manufacturing plants, their apparatus and equipment allow to manufacture steel components of unit weight up to 10 tons. The offer includes: supporting structures of devices and equipment, welded structures of various types of non-alloy steel, construction halls, shopping centers, warehouses, manufacturing plants and other industrial facilities, transport equipment and cargo handling, load-bearing structures of buildings, scaffolding, platforms, stairs, platforms, barriers, nettings, etc. The range of products the construction company offers include: assembly of steel structures, installation of roof and wall cabinets halls of commerce, trade and service companies, to execute projects as a general contractor, a comprehensive execution in the field of general and industrial construction. The company has a team of technicians specialized in the installation of steel structures and roofing and cladding. The Company also implements projectsin close cooperation with the investor acting as General Contractor in Poland and abroad.

PPH Enero - Silesia Sp. z o.o.

Polish company

The main focus and specialisation of PPH ENERGO-SILESIA Sp. z o.o. is engineering, construction and maintenance of all kinds of heat exchangers with extended heat transfer surface used in cooling systems of industrial equipment, especially electrical machines. The company has been collaborating for many years with a usplier of finned tubes, mono- and bi-metallic, which are used in heat exchangers. Moreover, the company manufactures spare parts for mechanical components of power industry equipment. Another area of activity is manufacturing of temperature sensors and a full range of services for electrical systems, electronics and industrial automation, including deliveries of I&C equipment. The company also provides engineering and installation of process control systems, as well as engineering and installation of control cabinets for cooling systems of power conversion machinery, especially transformers. Except for production, the company also provides services related to: upgrading existing cooling systems of electrical equipment, installation of heat exchangers of own production at sites, maintenance and testing of I&C equipment (temperature, pressure and pressure difference transducers, gauges, recorders, regulators, temperature sensors), installation of control and instrumentation cabinets, installation of electrical systems along with measurement equipment, installation of measurement and control systems (temperature, pressure, flow, gas analysis).

PPUH Konstalex Sp. z o.o.

Polish company

Konstalex Sp. z o.o. started operations in 1993. The company operates all over Poland, as well as in other countries in Europe and beyond. The company is specialised in manufacturing heavy steel structures for power industry and bridge structures. Moreover, the company manufactures light structures for general construction projects and specialised unique and repeatable structures. Production of steel structures is based on typical carbon steels and high tensile steels. The platn manufactures approximately 1000 metric tonnes of structures per month, i. e. around 12,000 tonnes per year. PPUH Konstalex Sp. z o.o. also manufactures H bars widely used in industrial and municipal construction projects, steel columns and girders in the shape of T and H bars, with wide range of dimensions. The production plant is equipped with essential manufacturing equipment and machinery and auxiliaires such as: equipment for plasma and oxygen cutting of sheets, cleaning equipment, drilling-milling machines, lathes, rollers, presses etc. The plant is located 5 km away from Warsaw-Katowice expressway.

Przedsiębiorstwo Remontowe  
“PAK SERWIS” Sp. z o.o.

Polish company

PR PAK Serwis Sp. z o.o. provides services involving overhauls, isntallation and construction. The company is mainly acting as EPC contrac-tor for investment projects, cooperating with construction-installation companies as well as manufacturers and suppliers of engineering materials and equipment. PAK Serwis offers its services to power and heating industry, offering steel structures, workshop assembly, in-dustrial and general construction works and dismantling. PAK Serwis is capable of performing comprehensive overhauls, modernisations and maintenance of power generation equipment: boilers, turbines with auxiliaries, thermal equipment, and comprehensive execution of construction works. The main services involve carrying out whole projects in energy industry and other industries, as well as overhauls and maintenance of process equipment in power industry and other industries. The company offers specialised production and workshop services for steel structures, comprehensive performance of construc-tion works. The company holds relevant certificates and production equipment which enable it to independently perform most required overhaul, installation and construction works. Currently the company employs around 900 people.

PRU Mega - Rem  
Sp. z o.o.

Polish company

The company mainly offers works for power and heat industry: overhauls and upgrades of steam and hot water boilers, steam turbines, valves, pipelines, coal mills, fans, generators, heat exchang-ers, preheaters, pumps, gate cranes, lifting euqipment, switchgears, cables, lighting systems, electric motors, telecommunication equip-ment, electric battery cars and I&C equipment. The company builds district heating preinsulated networks, pumping stations, heat ex-changers, gas-fired boiler systems, water treatment systems, solar collector systems for heat generation from solar radiation energy. It offers comprehensive turnkey deliveries of industrial facilities. It provides maintenance for heating and air conditioning systems, heat exchangers, pumping stations and lifting euipment. Company provides comprehensive construction of industrial facilities such as drinking and raw water pumping stations, water treatment stations, heavy fuel oil (HFO) unloading and storage stations, boiler plants fired with oil, coal or gas, dust loading and storage systems, heat exchange stations, coal handling facilities. The recent addition to business areas is designing electrical and I&C systems, both con-ventional and with freely programmable components and SCADA systems, prefabrication of switchgears, control cabinets, panels etc., installation of electrical equipment and industrial automation, commissioning, test operation, calibration runs.

PZM Amex Sp. z o.o.

Polish company

PZM Amex Sp. z o.o. is a company which offers a wide range of services, from engineering to delivery of finished product and pre-operational testing. It is specialised in manufacturing complete drill-ing machines for offshore oil and gas production. It also offers: spare parts for engines used in marine and railway industries, such as high pressure pums and marine drives, as well as casting, weld-ing, machining and engineering services. The production facility is located in Puck, and assembly hall is located in Kartoszyño on Żarnowieckie Lake. The company is involved in production of ma-chinery and equipment for offshore drilling platforms and performs following works: welded structure, machining, painting, electric and hydraulic systems, pre-operational tests, including structures for bolting, transportation and storage, as well as feeding pipes to the drilling machinery. The company manufactures single-action plunger pumps. It offers marine power packages based on diesel engines and SR reduction-reversion gear of own design. The plant also manufactures spare parts for high- and low-speed marine and railway engines, such as: cylinder heads, pistons, gears, cog wheels, inlet and exhaust valves.

Radpol S.A.

Polish company

Radpol Group is a manufacturer and supplier of advanced heat transfer technologies, products for energy industry and plastic pipes for water, sewage and gas networks, as well as solutions for other branches of industry. Key groups of Group's customers include: power industry, gas utilities, heating utilities, railway industry and automotive industry. A part of Radpol Group is Radpol S.A. company. Operations of Radpol Capital Group concentrates in several separate operational segments, although there are numerous product and market synergies. The Group comprises five modern plants: Radpol in Człuchów, Elektroporcelana in Ciechów, Rurgaz in Lublin, Wirbet in Ostrów Wielkopolski and Finpol Rohr in Warsaw. The Człuchów plant manufactures heat-shrink products, electric wires and cable fittings. Radpol is specialised in products made of improved polyethylene based on own material mixtures, ready for radiation crosslinking. RADPOL owns two electrone accelerators with energies of 2. 5 MeV and 4. 5 MeV used for radiative polyethylene crosslinking.

Rafako S.A.

Polish company

Rafako S.A. is an EPC contractor for power generator units and boiler manufacturer operating in Polish and European markets. A production plant for mechanical grates in Mikołów owned by Rafako manufactures grates and mills, and ESP production plant in Pszczyna offers complete de-dusting units, including high-efficiency electrostatic precipitators. The core business of the company involves designing and manufacturing wide range of boilers, including supercritical boilers and fluidised bed boilers, as well as environment protection equipment. The offer includes: EPC deliveries of complete power generation units, steam and hot water boilers fired with solid, liquid and gaseous fuels, including supercritical steam boilers, circulating fluidised bed boilers, grate boilers, flue gas desulphurisation plants based on absorption methods (wet limestone or semidry), municipal waste incineration plants, bioass boilers, heat recovery steam generators for combined cycle poewr plants, dedusting systems, electrostatic precipitators, de-NOx plants using catalytic method (SCR), diagnostics, advisory and consultations concerning boiler upgrades and optimisation of their operating parameters, coordination of deliveries, installation and commissioning of boilers, manufacturing boiler parts and components, including furnaces, air preheaters, exhaust gas ducts and steel structures.

Rawplug S.A.

Polish company

Rawlplug S.A. is a manufacturer of fixing elements operating in Europe and beyond. Solutions supplied by its production facilities find applications in construction industry, power industry, automotive industry, machine and electric machine industry, mining, shipbuilding, road engineering and timber industry. In thirteen companies across four continents, the Rawplug Group hires more than 1900 persons. The company develops innovative solutions of fixing technologies, engineers them, manufactures developed products and then markets them. THe company produces construction mountings, hand tools, power tools, standardised screw components. Product portfolio includes: mechanic connectors, threaded components, glued-in anchors, drills, buzz saws, hand tools and power tools. Production plants of Rawplug are located in Wrocław, Bielsko-Biała, Łańcut and Kaliningrad and their output is hundreds of millions of fixing elements per year. The company has own production of plastic elements (light mountings, facade insulations, roof insulations), chemical anchors (cartridges, vials, own patented system of self-opening cargoes CFS+), as well as saws and other tools.

Remal Sp. z o.o.

Polish company

Remal Sp. z o.o. concentrates on broadly undesrtood operational support for industrial installations. The company is specialised in overhauls and upgrades of indsutrial equipment, machining of metals, creating steel and aluminium structures. A special and unique capability is welding of large and very large profiles of aluminium. Moreover, thanks to having own design office and a staff of experience dengineers, the company may deliver comprehensvie services for new production equipment, from design to construction and installation. Experts of the company are ready to resolve technical problems and restore serviceability of non-standard euipment, often caused by unavailability of spare parts. The company manufactures steel and aluminium structures used in industrial construction and as components of equipment. In the area of surface treatment, Remal has technical capabilities enabling surface processing and painting comopnents of large-sized steel structures. It has a four-turbine roller cleaner with turbines set at an an angle to the cleaned element. Rmeal also has a professional paint shop with two hydrodynamic units for application of paint coats. The company also offers rolling metal sheets (applies to non-alloy steels).

Remy Sp. z o.o.

Polish company

REMY Sp. z o.o. commenced operations in 2004. Its business activity is divided into six divisions: division of conveyor maintenance and overhauls, mechanical engineering division, power plant overhaul division, steel overhaul division, electrical division and testing laboratory. The company has a potential to carry out comprehensive works involving prefabrication, maintenance, services and installation in: industrial construction, mechanical engineering, production and overhauls of pressure equipment, maintenance and upgrades of lifting equipment, power plants and plant internal transport systems, and variety of works related to production of machinery, equipment, components and spare parts for heavy industry. The company has experience in manufacturing and overhauling furnaces, metallurgy machinery and equipment and sulphur acid production facilities. The company also applies chemical resistant coatings using underpressure glueing in tanks, apparatuses and various reactors. It owns state-of-the-art equipment for pressure welding and welding of thermoplastic materials. Owned equipment and various modern production methods enable quick deliveries.

Rockfin Sp. z o.o.

foreign company

Established in 1991, Rockfin offers comprehensive customer service starting from design, production, testing, NDT, servicing and spare parts delivery for liquids (oil, water, fuel) systems, gas systems and high pressure drive and control hydraulic systems for Power Industry (incl. Nuclear Power Plants). Rockfin company employs 430 persons including 130 engineers, uses the modern 3D CAD, Finite Element Analysis and Computational Fluid Dynamics software. The modern facility is located near Gdansk with a total halls area of 6000m2, equipped with cranes with lifting capacity up to 140T. The Flamanville III auxiliaries for generator were the largest we have produced so far (1750MW). The largest steam turbine auxiliaries we produced for 1075 Power Plant was equipped with tank volume 100 m3 and a pump capacity of 12 000 l/min. Rockfin has experience and capability to test all equipment manufactured using dedicated test equipment (for 50Hz or 60 Hz). Qualified personnel supervising fully control based on certificates International Welding Engineer, International Welding specialist and International Welding Inspector. Rockfin Laboratory (LBT) is an independent research unit accredited by the Polish Atomic Energy Agency PAA (license No. D-17405). Over 430 experts employed.

Safe Co Ltd.  
Sp. z o.o.

Polish company

SAFE Co. Ltd. Operates in shipbuilding and offshore industry, as well as in the construction of steel bridges, constructions for chemical, petrochemical and power installations. The main areas of activity of the company is the construction of steel structures, renovation or rebuilding, hull blocks and fully equipped ships, the construction of aluminum structures - the wheelhouse, superstructure, masts, boats, specialty tanks, piping, construction of halls, construction of bridges and viaducts, boring bearing sets steering and propulsion shafting. The company also offers services and products in the field of corrosion protection: blasting, sandblasting, dust-free cleaning, covering with zinc, aluminum or aluminum alloys, anti-corrosion protection of concrete, priming and injection, corrosion protection flue gas desulphurization installation, epoxy flooring systems, fire protection, insulation, installations drying, hydroblasting, shell tanks protecting against leakage. Construction office enables the development of working documentation of many prototypes. The company has the necessary equipment for carrying out corrosion protection work continuously in different climatic conditions. Business profile covers a wide range of shipyard professions: fitters, welders, carpenters, painters.

SECESPOL Sp. z o.o.

Polish company

Secespol Sp. z o.o. was founded in 1988. It is a Polish manufacturer of heat exchangers and economisers. Except for shell-and-tube exchangers, soldered plate exchangers and screwed plate exchangers, Secespol also delivers specialised heat exchangers for petrochemical industry, district heating, power industry, food industry and pharmaceutical industry. Secespol is present all over the world via its subsidiaries: Secespol Canada, Secespol Deutschland, Secespol Czechy, Secespol Asia and more than 200 sales offices in Poland and abroad. Products of Secespol Sp. z o.o. include: heat exchangers, economisers, insulations, accessories, and specialised equipment for petrochemical industry, energy industry, food industry and pharmaceutical industry. The offer includes titanium heat exchangers designed for particularly demanding conditions. The equipment is manufactured at a plant in Nowy Dwór Gdański. If needed, the heat exchangers are equipped with local instrumentation and control components. The company also offers in-situ maintenance of heat exchangers.

SICES Polska  
Sp. z o.o.

Polish company

SICES Polska is a company whose activity is focused on deliveries of pressure equipment. Manufacturing activities are concentrated in the Kielce facility. Main customers are: power industry, oil & gas industry, petrochemical and chemical industry, nuclear industry. The offer includes: pressure vessels - columns, reactors, drums, separators, towers, absorbers, evaporators, multi-layer high pressure containers; heat exchangers - shells and tubes, heaters, preheaters, air coolers, steam turbine condensers; boilers - industrial and heat recovery boilers; pipeline prefabrication. Sices Polska Sp. z o.o. was established in 2003 and currently employs ca. 160 persons. The company is also designing pressure equipment, such as boilers or heat exchangers. Heat transfer engineering is based on TERMA codes and HTRI software. Structural design is made with ANSYS software. The main production facility is located in Kielce and has a total area of 60,000m2. Maximum limit for transport of manufactured elements is 170 metric tonnes. The production plant has a well-equipped technical equipment fleet as required for production of pressure components.

Siemens Sp. z o.o.

foreign company

Siemens is a global supplier of solutions for all businesses related to electricity - from power generation, to transmission, distribution and smart grids, to efficient use of electricity in all areas of economy. Business activity is divided into nine businesses: power engineering, renewable power engineering, services, energy management, construction, transportation, financial services, automation and robotics. Siemens Sp. z o.o. - Company is involved in promoting technologies ensuring efficient utilisation of natural resources and reduction of environmental footprint. The offer meets the requirements of the power industry market and includes following items: gas turbines with output of 5-400 MW, steam turbines from 45 kW to 1900 MW, generators from 25 to 2235 MVA, compressors which meet standards for oil & gas industry, on-shore gas production and its transport by pipeline networks as well as industrial processes like air separation etc. Thanks to comprehensive services Siemens is able to carry out a project from developed drive systems up to complex turnkey facilities. Offer of the business is complemented by automated control processes, which include complex instrumentation and control systems, electric systems and IT solutions.

Stabar Sp. z o.o.

foreign company

The company was established as a company with German capital and is a design and manufacturing enterprise of steel structures and equipment for environmental protection for the power and chemical industry. The main activity of the company is the production of steel structures and industrial applications, including exhaust gas cleaning system components in power plants, cement plants and incinerators. The company designs, produces and transports items such as electrostatic precipitators, bag filters, ducts, tanks, silos, supporting structures, housings, valves, pipes, fittings, supports and support structures for fasteners, tension suspension for fixing boilers. Orders are executed on the basis of their own personnel: from design work through production to finished installation of equipment on construction sites. Performs the tasks of production (cold cut, flame cutting manual and automatic cutting, plasma cutting manual and automatic, bending and folding sheets and sections), construction welding (manual metal arc, gas-shielded method: MAG / MIG, TIG welding, automatic submerged arc under flux). The company also provides services in the field of research: the chemical composition of metallurgical materials, metallurgical, mechanical, X-ray, ultrasound.

StalFa Sp. z o.o.

Polish company

StalFa Ltd. with its headquartered in Sokolow Podlaski was established in 1995 at the initiative of Mostostal Siedlce SA (now Polimex-Mostostal SA). Stalfy production profile is largely telecommunications towers and masts and steel containers and palettes. Their offer includes also other proposals to the wider construction and energy, for example formwork and props, elements of scaffolding, guardrails, fencing systems, industrial facilities, balcony railings, handrails staircases and numerous other structures associated with a finish construction projects. The company has production halls and warehouses with an area of 16,000 m2 equipped with modern machinery. The machine park operates more than 200 machines, among others: laser cutters, machining centers, burners: controlled automatic cutter, welding robots, thread rolling machines, hydraulic press brakes. Additionally, the company owns tunneled rotor cleaner, 1500 Conventional mills, CNCs, hydraulic guillotines, surface grinders, column and radial drills, semi-automatic welders, lathes, eccentric presses and overhead traveling cranes up to 5 tons. The company also specializes in the production of aluminum structures.

Stalko

Polish company

STALKO Przedsiębiorstwo Wielobranżowe is a company with 30 years of experience in its respective field. The main focus of STALKO is the design and manufacturing of machines and devices for industry and agriculture made out of high carbon steel and stainless steel, steel fireplace inserts, stack heat exchangers. The company operates a productions plant with 3000 square meters of area, equipped with machines, to cut, shape and machine steel sheets. STALKO provides products for the home market and exports to France, Luxembourg and Great Britain. Today STALKO offers cutting of metal materials using laser, plasma or gas, edge bending (for steel sheets), roller bending (for steel profiles), cold rolling for sheets and pipes as well as lathing, grinding, milling and also welding using MAG and TIG methods (both by hand or automated). The STALKO company uses SolidWorks and AutoCAD while designing its products and offers installation services for the products they supply.

Stalkon Sp. z o.o.

foreign company

Stalkon Ltd. is a specialist manufacturer of steel structures. Stalkon Ltd. specializes in complex projects in the field of manufacturing of steel structures which are heavy and bulky - from preparation technology, through fabrication, machining, corrosion protection, final assembly of steel construction, installation and mechanical assemblies, no-load commissioning, loading and transportation. Among the executed groups of structures that can be distinguished are: construction cranes - port cranes for loading, unloading and reloading, stackers dumps, cranes, container cranes, conveyors and carriers, offshore structures - offshore platforms, and their equipment, technological systems - tanks, silos, pipelines, boilers, stoves, chimneys, bridge structures - footbridges, bridges, viaducts, marine structures - modules of ships and their equipment, architectural structures. Almost 100% of production of Stalkon Ltd. are contracts with foreign companies. Equipment machine park include: specialist lifting equipment (from 10 to 150 tons) and gantries (from 5 to 10 tonnes), the modern specialist equipment for cutting and machining of metals, machinery developed in the field of welding process.

Stocznia Gdańsk S.A.

Polish company

Gdańsk Shipyard S.A. is a globally recognized shipbuilder. During the over 65 years of our experience, we have built more than 1,000 sea-going vessels of various types and application for ship owners from around the world. Alongside the highly qualified staff, the greatest strength of the Gdańsk Shipyard Group is its production assets, which are unmatched in Poland and the region. This means not just the largest prefabrication hall in Europe, but also automated production lines for welding with exceptional precision and efficiency. We are company specialized in services and prefabrication of flat panels in field of steel structures (marine and offshore). Offered services: Plates and profiles cutting, Plates and profiles bending; Initial prefabrication, Automated prefabrication (micropanels line MPL, flat panel lines: CSP and LSP). Gdańsk Shipyard S.A. has modern machinery park which allows gas cutting for plates to 120 mm of thickness and plasma cutting for plates to 30 mm of thickness. Automated prefabrication: CSP line is an automated production line for panels of maximum dimensions: 12.0 x 12,5 m and thickness of 4 to 12 mm with stiffeners. It is a compact technological line comprising nine automated workstations. LSP is a compact technological line comprising 12 automated workstations with dimensions: 214,5 x 149,5 x 20,0 m. MPL line is a technological line comprising two automated workstations (assembly platforms) with dimensions: 48,0 x 12,4 x 3,2 m.

GSG Towers Sp. z o.o.

Polish company

GSG Towers was established as an SPV in order to enter a completely new market for Gdańsk Shipyard Group - the production of wind towers. Starting in 2010 as a company responsible for the sale and production of towers on the premises of the Gdańsk Shipyard Group, GSG Towers has built up its competences to become a manufacturer with a proven track record of successful cooperation with the world's leading manufacturers of wind turbines. Alongside the highly qualified staff, the greatest strength of the Gdańsk Shipyard Group is its production assets, which are unmatched in Poland and the region. This means not just the largest prefabrication hall in Europe, but also automated production lines for welding with exceptional precision and efficiency. We are company specialized in steel structures, wind towers, machinery working on drilling and wind platforms and specialized vessels. Offered products: Steel structures (onshore and offshore): trafoplatforms, fundament elements, girders; Wind towers (onshore and offshore); Marine structures (hull, blocks, sections); Machinery and equipment (gantry cranes, port machines); Other cylindrical structures. We have blasting and cleaning lines which give the possibility of blasting, metallizing and painting of steel structures and wind towers. Gdańsk Shipyard Group owns Kaszubskie Quay with length of 260 m equipped with 2 cranes with 50 T capacity each (can work in tandem). Distance to open sea (Baltic Sea) is 1500 m.

ŚFUP Sp. z o.o.

Polish company

The Świdnicka Fabryka Urządzeń Przemysłowych ŚFUP (Industrial Equipment Factory in Swidnica) Ltd. specializes in the design, manufacturing and repair equipment used in the sugar and chemical industry and equipment for environmental protection and power production. In addition to ŚFUP also provides assembly facilities in the country and abroad. Among the devices manufactured for power production and environmental protection worth mentioning are: moving grates and roasters for waste to power to incineration plants, drier-granulators and mixers for sewage sludge treatment plants, flue gas gate valves used in power plants, systems for gas turbines, waste incinerators and other industries, housings for wind turbine shell-and-tube heat exchangers, made of carbon and stainless steel, air and flue gas, equipment for gasification and combustion of biomass, three column centrifuge filters used for dewatering gypsum flue gas desulphurisation - IOS, and wastewater treatment plants. It also has non-destructive testing laboratory, including his own X-ray R and ultrasound testing center. We also provide mechanical and chemical treatment of stainless steel constructions. We use vibratory stress relief.

Talmex Sp. z o.o.

Polish company

The company Talmex Ltd. provides services in the field of industry, including power generation, petrochemical and chemical environmental protection, energy efficiency, production efficiency and increase productivity. The offer includes the design and construction of industrial plants (water treatment and condensate purification of circulating water, pipelines and facilities of IOS, storage of chemicals, pumping stations, industrial production, chemical etching and galvanizing), equipment (exchangers, gravel filters and mechanical ionite catchers, desorbers, neutralizers, injectors, metering stations, reactors, mixers, strainers, separators), storage tanks (for chemicals, water and condensate) and technical (gravel, exchangers), pipes and channels (straight connection pipes, fittings, channels, support, pipelines, ducts, which skids), with prefabrication and assembly, the creation of chemically resistant coatings (rubber linings, Phenolic, reinforced resin coatings, chemical resistant lining, a paint anti-corrosion). The main products of the company traits may include such features as: durable, efficient and chemically resistant solutions, optimized design processes, hybrid use of materials, modern production technologies. Many years of experience in the field of rubber flooring applications, ebonite and laminates.

Tarkon Sp. z o.o.

Polish company

TARKON is a company founded in 2000 at the site of Tarnobrzeg Special Economic Zone EUROPARK-WISŁOSAN. The company manufactures and supplies steels tructures, metal products and industrial installations. Tarkon Konstrukcje Stalowe Sp. z o.o. manufactures following products: light and heavy load-bearing structures, structural elements of industrial halls, components of masts, supports of industrial systems, steel [wieżby dachowe?], steel silos and containers, supports of production lines. The company offers following services: engineering, advisory and creation of workshop documentation; assembly of off-shore structures; manufacturing industrial hall structures; engineering and manufacturing bridge structures; manufacturing support structures for process systems; manufacturing process equipment; manufacturing light support structures, protective barriers and ladders; series production of elements; installation of structures at sites; other services as specified by customer; external non-destructive tests for welded structures and anti-corrosive coatings; EPC constructino of facilities and project management; preparation of surfaces of steel structures by grinding in a grinding bay; application of anti-corrosive coatings, i. e. metalisation and painting.

Ticon Sp. z o.o.

Polish company

Ticona Ltd. offers a wide range of connectors, quick couplings for tubing made of standard aluminum, brass, polypropylene, stainless and galvanized steel. Moreover, the company has experience in the design and manufacture of specially made coupling fittings for the needs of the individual clients. The products are designed using CAD programs, assembled by hand using specialized hydraulic presses or welded at the welding station. Ready-made cables are subjected to tightness and strength tests and hydrostatic tests on test equipment. Currently on offer it is a few hundred different types and about one hundred types in many popular diameters, the company is able to deliver immediately. In addition to the classical methods of mechanical installation ends, the company has specialized presses to crimp terminals and welding technology tips for metal hoses. Realized there are also orders for special cables ready. These are hoses with integral Teflon coating, metal hoses and composite-size, eg. For sea shipments, special rubber hoses with pre-vulcanized tips. The company is headquartered near Poznan.

TNS Sp. z o.o.

Polish company

TNS Sp. z o.o. is an entity operating int he Polish market in the area of manufacturing heat exchangers and steel structures. TNS company is operating in Polish and foreign markets, especially in Germany. It si mainly specialised in manufacturing and installing all kinds of steel and aluminium structures, installation of industrial systems and environment protection systems (water pipelines, tanks, air conditioning), locksmith and welding services and broadly understood metalworking. TNS also manufactures truck containers, trailers and semitrailers, scoops and excavator buckets. Moreover, the company has been and still is - along with its partners - carrying out numerous investment projects involving road infrastructure (bridge structures). Operated fleet of machinery is sufficient to manufacture heat exchangers, vessels, columns, pipelines, prefabrication of metal sheets for storage tanks, prefabrication of steel structures. Current offer of the company includes: manufacturing of components of industrial and construction machinery, large size structures (halls, bridges, flyovers), pressure and non-pressure vessels for loose and liquid materials (including those for chemical industry, for flammable, hazardous or corrosive materials), heat exchangers and auxiliaries for power industry, shell and tube heat exchangers (high and low pressure), power plant condensers, columns, reduction stations, drain expanders, gland steam condensers, water and steam shells, deaeration stations, crossover pipes and coolers.

Tofama S.A.

foreign company

The TOFAMA SA company specializes in the production of equipment and devices for the chemical industry, mainly for the production of acids. Today the company offers facilities and equipment with high technical production level, storage and transportation of chemicals and foodstuffs, such as chemical and food pumps, industrial valves, metal equipment. It specializes in the production of equipment, construction and containers made of stainless steel, carbon steel, aluminum, industrial valves provided for operation in harsh environments, single-stage centrifugal pumps chemical resistant horizontal and vertical single-screw positive displacement pumps. Their offer is directed to the chemical industry, grain, dairy, municipal services and environmental protection. The main domestic customers of TOFAMA SA is the chemical industry, food processing, energy and mining. The company has a well-equipped machine park allows machining and plasma cutting. The company not only performs production activities but also conducts complex repairs of pumps and other similar devices. The Company operates a full service repair damage from diagnosis through recovery and performance parts ending in checking the operating parameters a the test station.

Veolia Water Technologies Sp. z o.o.

foreign company

The company suppliers sewage treatment systems, water treatment systems and sewage sludge processing equipment. The product range consists of 350 technologies, including:, drinking water treatment, process water treatment, municipal and industrial sewage treatment, evaporation and crystallization, sludge treatment, desalination, production of laboratory quality water and mobile solutions. Veolia Water Technologies has experience and technologies which permit water and sewage treatment for all circuits of a power plant or CHP plant. It has approximately 300 reference deliveries all over the world in the energy sector. The CoLD process proprietary to Veolia ensures cleaning of sewage from coal-fired power stations. Using evaporation and crystallisation, CoLD process is used for recovering clean water The company also offers. preparation of demineralized water used for feeding steam boilers, condensate treatment, management the released boiler blowdown from the water-steam and cooling circuits, preparation and conditioning of the cooling water, sewage treatment with the possibility of reuse and sludge treatment, dewatering and optimization the depositing of ash and slag combustion waste, use of Zero Liquid Discharge (ZLD) technology, evaporation and crystallization systems, treatment of sewage from FGD systems, service with particular emphasis on decontamination, optimization of water chemical conditioning.

Vistal S.A.

Polish company

Vistal S.A. is a manufacturer of steel structures, actively operating in European market since 1991. The company has experience in supplying steel structures for construction industry, power industry, shipbuilding and offshore proejcts. The company is carrying out comprehensive works with broad scope: from design documentation to prefabrication, anticorrosive protection, transport to installation at site. The company is operating both in Poland and abroad. It has its manufacturing facilities equipped with specialised equipment. Vistal S.A. is a part of Vistal Capital Group. The Vistal Group offers: structures made of carbon, alloy and stainless steels and of aluminium for bridges, shipbuilding, offshore applications, industrial projects, wind power plants, environment protection projects and telecommunication. The offer also includes: assembly of bridge structures at site, supplies of metallurgic materials, overhauls of ships, heavy machining of large surfaces, hot galvanising, maintenance of cutting and welding equipment, engineering, performing non-destructive examinations of welded structures. Vistal Group delivers industrial construction projects and transport infrastructure projects as EPC contractor. Offer of the Vistal Group includes comprehensive construction and modernisation of: bridges (fixed and movable), flyovers, footbridges, bicycle bridges and industrial halls.

Zakład Budowy Aparatury  
i Remontów Specjalistycznych  
MEZAP Sp z o.o.

Polish company

ZBAiRS MEZAP Sp. z o.o. was established in 1963. Its core activity involves construction of equipment used by chemical, petrochemical, paper and food industries. The company also provides maintenance services to such equipment, as well as lifts and weighing devices. Main area of activity of MEZAP involves installation and overhauls of instrumentation and pressure equipment for chemical, petrochemical, energy and food industries, such as: tanks and drums, variuos types of heat exchangers, hot water and steam boilers, drip coolers, reactors, boiler coils, column apparatuses, filter housings, mixers, evaporators, separators. The company carries out welding of all steel grades and non-ferrous metals using TIG, MIG, MAG and SAW methods, manually, semi-automatically and automatically. Following steels are used in construction and overhauls: carbon, low-alloy, high-alloy, austenitic high-alloy and duplex, as well as aluminium, nickel, titanium and their alloys. The company also provides other services, such as sheet cutting, rolling, gas cutting (any shapes), machining, thermal and thermochemical treatment, anti-corrosive protection of equipment and structures.

Chemet S.A.

Polish company

Chemet is a manufacturer of broad range of pressure vessels: portable, stationary and railway tankers. Chemet has also started series production of stationary overground pressure vessels for propane and propane-butane intended for heating systems, process applications and LPG car refuelling stations. Currently LPG tanks are the main product of the company. Full offer of manufactured pressure vessels also includes stationary underground tanks, storage tanks and railway tankers made of carbon or high-alloy steels. Except for essential equipment manufactured by Chemet, the company is capable of producing many other components of various systems, such as: complete water deaeration stations, pipelines and conduits, components of water and air treatment stations, high quality process instrumentation - upon own documentation (developed by own engineering team basing on process calculations) or submitted design. Instrumentation adapted for final users' requirements is made of carbon steel (structural, fine-grain and boiler) and high alloy steel (austenitic or ferritic-austenitic DUPLEX).

Zakłady Automatyki  
POLNA S.A.

Polish company

The company offers a wide range of products for industrial and district heating automation, central lubricating systems and laboratory equipment. POLNA S.A. designs and manufactures control valves, pneumatic multi-spring diaphragm actuators, steam desuperheaters, reduction and cooling stations, needle valves, self-actuating regulators, central lubricating systems, distillers and redistillers. Apart from standard catalogue products, the company manufactures special customized valves adapted for individual customer requirements. The products are used in many industrial sectors of power engineering, chemical, gas, petrochemical industries. Industrial automation products are used in automatic and remote control systems to control flow of gases and liquids. The company offers a wide range of product designs and material executions. Customers include leading companies in various businesses, including ALSTOM POWER – power engineering; SYNTHOS DWORY – chemistry; SIEMENS – automation; PGNiG – gas industry; ORLEN – petrochemistry; AUSTRIAN ENERGY – power engineering; SKODA POWER – power engineering. The quality of POLNA products is assured by Quality Assurance Certificates.

ZRE Katowice S.A.

Polish company

The activities of the Bets ZRE Katowice company include repairs, upgrades, installation, service and manufacturing of installations associated with steam turbines and gas engines, boilers, installations, environmental protection, machining of bulky structures, machine construction, security, anti-corrosion systems, offshore, pipeline, automation and fittings. Furthermore, the profile of the company includes the design, logistics and diagnostic services, including NDT and DT. In terms of pipeline, the company develops steam and water circuits with complete accessories such as mounting, insulation, metering and monitoring elements. The pipeline offer includes cold pipe bending using the inductive method and subsequent heat treatment and prefabrication of piping components, including blasting, painting and packaging. The Pipeline Prefabrication Department has the ability to prefabricate ready pipeline systems in the spool's. All individual elements of the pipeline such as bends, tees, reducers, flanges and connectors are assembled into finished installation kits. The company also offers a wide range of high quality equipment for measurement of pressure, differential pressure, flow, level and temperature used in many industries.

ZUK Stąporków S.A.

Polish company

ZUK Stąporków S.A. is specialised in manufacturing equipment for: heating industry, commercial power industry, sugar industry, cement plants, metallurgy plants, foundries and construction industry. The core busines of the company involves comprehensvie deliveries for commercial and broadly understood industrial power engineering. Since 2002 the company has been owned by STALMAX. Its supplies equipment for straw feeding, crushing and combustion lines, as well as technologies for co-firing biomass with pulverised coal. The company is building and delivering fom several dozen to several thousand tonnes of steel structures to companies such as: Skanska, Hunnebeck, Mostostal. For five years it has also been exporting environment protection systems such as: fabric filtres, exhaust gas ducts, worm and belt conveyors and dosing units to Western European and Scandinavian countries. Except for equipment manufacturing, ZUK Stąporków offers engineering and advisory services, as well as maintenance. Its engineering office devlops detailed designs and programmes for laser burner, using state-of-the-art software such as AutoCAD, AutoCAD Mechanical, Solid Worls or Tru Tops.

Zamet Industry S.A.

Polish company

Zamet Industry SA It is a Polish company, one of the manufacturers of steel structures and machinery and equipment for the industry. Zamet Industry SA It belongs to TDJ SA, a Polish private investment company within the Domogala family, which has been active for over 30 years in various sectors of the economy. Zamet Industry SA It is the parent company of the Capital Group Zamet Industry. In the structure of the company operate two manufacturing plants: the plant in Piotrkow and establishment “Mostostal Chojnice” in Chojnice. Zamet Industry SA owns 100% of the shares of a subsidiary - Zamet Engineering SA with its registered office in Tarnów Mountains, in the structure which also operates the plant “Huta Zygmunt” in Bytom. Zamet Industry SA based in Piotrkow is the provider of steel components, including structures and equipment for the offshore industry (devices for underwater oil and gas, equipment for oil rigs), handling equipment and machinery for mining and energy (excavators digging, stacker - reclaimer, equipment exhaust, coal handling systems and equipment for the mechanical processing of mineral raw materials).

Zarmen Sp. z o.o.

Polish company

Zarmen Sp. z o.o. is a company involved in operational support of large industrial facilities. It also carries out comprehensive construction projects for machine industry, mining, power industry, petrochemical industry and cement industry. The company is specialised in maintenance and installation works for heavy industry, it overhauls and upgrades fan, blower and pumping stations, gears, air compressors and suction equipmet for coking gas. The works include vibroacoustic diagnostics as well as inspections and overhauls of related I&C and electrical equipment. The company also overhauls and upgrades mineshaft and mining facilities and euqipment, like main water removal pumping stations, DV and LKM chilling systems, corrosion protection of well towers, overhauls of lifting equipment and overhaul of mining wells. Separate group of works includes comprehensive deliveries and installation of processing euqipment such as sifters, vibration feeders, conveyors, agitation cells, crushers, pipelines for water, slam and compressed air etc. Moreover the offering includes delivery and installation of steel structures, pipelines, manufacturing and installation of industrial machinery within construction works, installation of electrical systems and I&C euqipment, as well as maintenance and overhauls.

ZETKAMA S.A.

Polish company

Zetkama S.A. is a supplier of industrial valves and tippings with own cast iron foundry, which offers following products: blocking valves, non-return valves, bellows, throttle valves, filters, ball cocks. Detailed offer includes valves and fittings such as: blocking valves, bellows, non-return valves, filters, throttles, ball cocks, anti-contaminatoin valves, expansion joints, slide valves, iron casts, safety valves, electromagnetic valves, fluid meters, bolts, screws, nuts, rivets, bent and perforated pipes for exhaust systems, metal components, industrial automation and services, i. e. advanced engineering concerning research and development of industrial valves (valve tests, development and adoption of new products, design and process studies) ; maintenance of gas equipment, engineering services and technical analyses, thermovision investigation of pressure vessels, monitoring and management of water-sewage infrastructure. Along with subsidiaries the company forms the Zetkama Group. Zetkama company was founded in 1946. It has delivered following projects: Samsung Wronki boiler plant, used euqipment: blocking valves, bellow valves, non-return valves, anti-contamination valves, filtres; Werner Kenkel CHP PLant, Krzycko Wielkie, used equipment: blocking valves.

ZRE Gdańsk S.A.

Polish company

ZRE Gdańsk S.A. is a company with more than 80 years of experience, involved primarily in: upgrades and overhauls of conventional power plants and hydro power plants, including production of water turbines, as well as designing and technical advisory. The company has an experience as an EPC Contractor for turnkey projects for Clients: EDF, LOTOS, TAURON, PGE, ENERGA, ENEA and as a supplier for Clients: ALSTOM, VOITH, Sulzer, CKD Blansko. ZRE Gdańsk has its own facility with conventional and CNC machining capabilities such as lathing, milling, grinding (4 and 5-axis CNC centres, up to 6 tons) and diagnostic laboratory (DT and NDT). Current offer of the company includes broadly understood overhauls and upgrades in conventional and renewable power plants: turbine rotors, turbine flow paths, turbine bearings, steam inlet valves, steam and water valves, turbine auxiliaries, construction of new pressure systems, installation of pressure systems, optimisation of system's routing, welding and fitting works, insulating works, prefabricating and installation of steel structures, overhauls and refurbishments of generators. In renewable power engineering ZRE Gdańsk manufactures Kaplan and Francis turbines. Additionally the company manufactures grid equipment and protection equipment for MV transmission networks.

ZUTMAR Sp. z o.o. was created by restructuration of Zutmar – Mechanika s. c. which was founded in 1989. The production is carried out in an industrial plant which has 2500 square meters of area and is localized in Łódź. The total area of the site is 5000 square meters. The owners and the staff have lots of experience in machining and specialize in machining metal elements. The offer includes: production of spare parts and complete elements for machine industry, electric industry and automotive industry (mainly pubic transport), gearbox elements for agricultural vehicles and precision machining of elements for regular customers. Some of the main customers are HAPAM Polska, ABB Polska, Jean Pierrot Francja, EURAM Italiana, MTG – Germany, public transport companies in Poland. The company has several partnerships with other manufacturers to provide a wider range of products and services such as laser and machine cut elements from steel sheets, bending using CNC benders, galvanic coatings, electrostatic paint, bending of pipes according to customers designs. All operations undergo quality control.

Instytut Chemii  
i Techniki Jądrowej

Polish company

Institute of Nuclear Chemistry and Technology in Warsaw is a research facility, which focuses on nuclear chemistry and technology problems. Except for research and development projects, it also offer a number of products and services to commercial customers. Offered products include: polymeric aminotriazol-metal complexes manufactured as liquids and used e.g. for manufacturing fabric filter materials for water and air or polymetallic surface materials with catalytic properties; pyrographite materials made as plates, tubes, dishes, crucibles and pyrographite for medical applications; certified reference materials – environmental, geologic and biological; laboratory control materials for facilities testing food and environmental samples for presence of strontium and caesium; fluorescent analysers for analysing heavy elements; dosimetric gates and stations for whole body or parts of body – stationary and mobile; sets and instruments for measuring air dusting and concentration of radon in air and water; radiometry equipment for mining and other industry. The institute also offers services involving: detection of irradiated food, nuclear analytical techniques, radiative sterilisation, diagnostics (e.g. leak tightness control) with radioisotopes, verification of proficiency of laboratories involved in determining trace elements and radionuclides in food and environmental materials, measurements of absorbed doses of photon radiation.

Polon Alfa  
Sp. z o.o. sp. k.

Polish company

Largest Polish manufacturer of fire alarm systems and dosimetry equipment offering its products in domestic and foreign markets. After several years of production profile has been extended with a device for detecting and signaling the fire. Experience gained over nearly sixty years made it with full responsibility we can protect everything that is most valuable for our clients. A continuous process of implementation to produce new, more perfect products and the latest technologies make POLON-ALFA successfully competes with the leading world producers, and sometimes even ahead of world standards. First-class design department specialists prefer an individual approach to each client. This allows you to accurately identify all customer needs and propose the most relevant solutions. Equipment manufactured by POLON-ALFA is based entirely on their own solutions. The entire cycle of designing goods is run by experienced professionals with extensive knowledge and great competence. Professionalism is a feature not only executives, but also of all employees involved in the entire production process. The experience and professionalism of the crew, combined with modern technology and implemented already in 1998 Quality Assurance System ISO 9001 and AQAP 2110:2009 guarantee the high quality of devices bearing the signature logo POLON-ALFA. Confirmation of guaranteed high quality throughout production is also giving the company a NATO code of the national economy and the entity obtaining the license for the production of equipment for the needs of national defense.

Relpol S.A.

Polish company

Relpol S.A. is a manufacturer of relays. Relpol was founded in 1958 as the Relay Production Plant REFA in Świebodzice. Products of Relpol S.A. are used in: industrial and power system automation, power engineering electronics, consumer electronics, telecommunication, household appliances and other products. The main products are: relays (electromagnetic, interface, installation, programmable, timer, supervisory, semiconductor), industrial automation instrumentation (contactors and thermal relays, motor controllers, motor breakers, chopper power supply units, surge arresters), automatic transfer switch automation (ATS automation modules for power supply - backup generator systems, ATS automation units for power supply - power supply systems), systems of stationary radiation monitors (control systems for nuclear power plants Kozłoduy, Mochovce, Dukovany) and production of radiometric gates under Russian and American licence. System of stationary radiation monitors SMP has been developed by engineers from Radpol's development division, in close collaboration with experts of the National Centre of Nuclear Research - Astrophysics Division Cosmic Ray Laboratory in Łódź and researchers of the University of Zielona Góra; digital protection systems.

TD-ELECTRONICS

Polish company

The owner of the company TD-ELECTRONICS Tomasz Dudek has 30 years of experience in software development, design and implementation of electronic isotopic measurement equipment for industry, laboratories and environmental measurements. TD-ELECTRONICS offer: spectrometers and laboratory probes for alpha, beta, gamma measurements, environmental probes to measure the gamma dose rate (TDLG) and the dose rate with gamma spectrum with identification of radionuclides (TDSG) equipment for environmental radiation monitoring - (PMS - permanent monitoring systems of the National Atomic Energy Agency and Institute of Meteorology and Water Management), TAZAR - content meter of natural radionuclides in building materials, TDuSP - miniature gamma spectrometer, meters to measure radon in water and air, set for industrial and field of gamma radiometry, mobile dosimetry gateway, isotopic thickness gauges and basis weight meters, traverse and stationary for the industry, non-isotopic thickness and weight meters, traverse and stationary for the industry, isotope gauges the density, concentration and weight belt conveyors for the industry, industrial and laboratory equipment fluorescence spectrometry content analysis media.
